

International Boulevard Pedestrian Safety and Local Road Safety Plan

FACT SHEET | OCTOBER, 2020

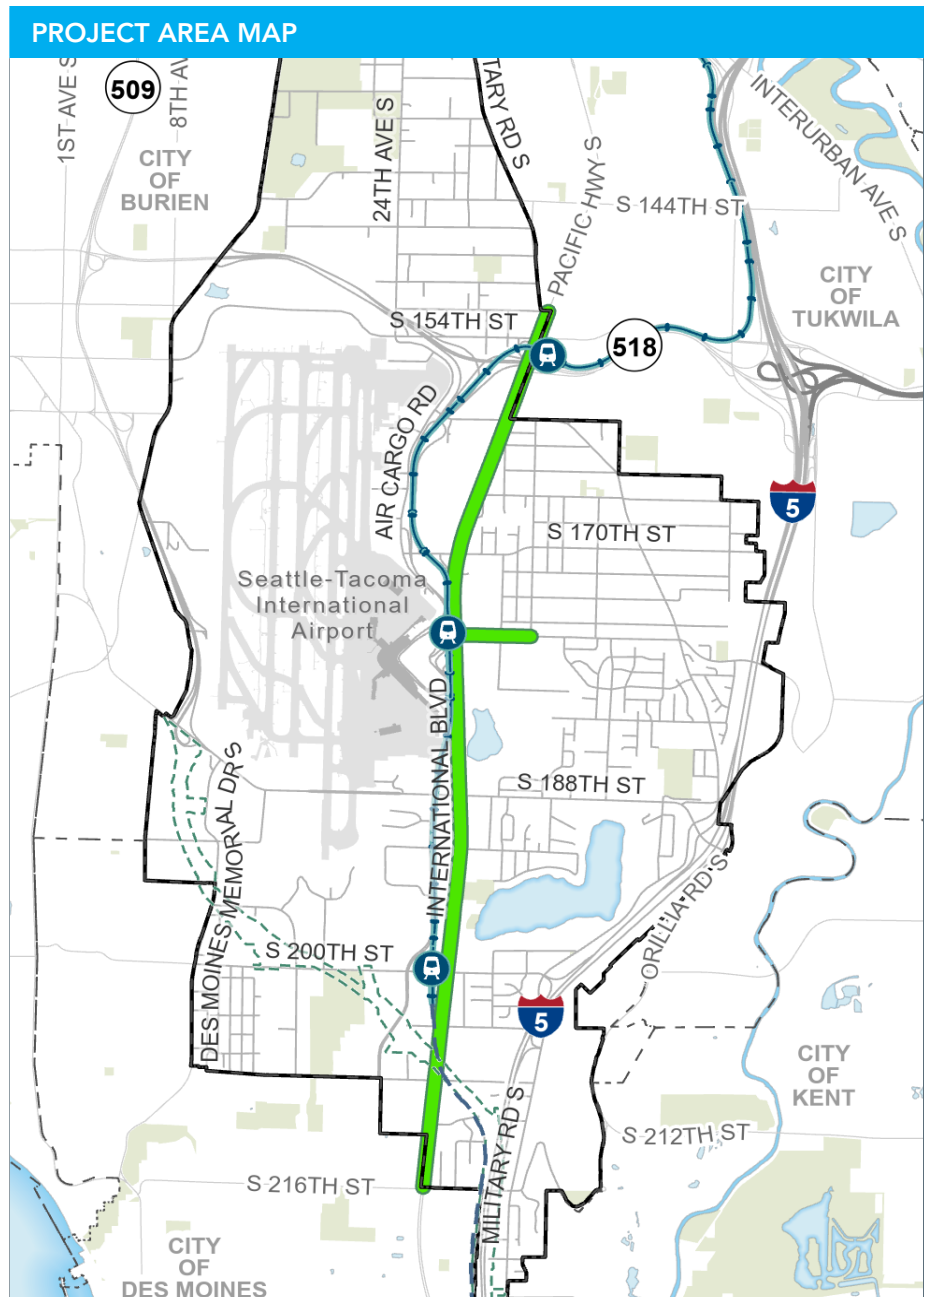

Project overview

Toole Design Group, BDS Planning, and Parametrix are assisting the City of SeaTac in developing two distinct safety programs presented in two phases described below.

Background/description

Phase 1 consists of developing pedestrian safety improvement projects on the International Boulevard corridor, from S. 152nd Street to S. 216th Street, and a construction set of documents for a City-selected project. The purpose of this project is to improve pedestrian crossing safety on International Boulevard by assessing collision and roadway data, identifying risk factors contributing to the collision incidents, identifying countermeasures and strategies, conducting public outreach and developing and prioritizing countermeasures/ strategies.

Phase 2 consists of preparing a Local Road Safety Plan (LRSP) that meets the requirements for the WSDOT Local Programs Division with a special emphasis placed on the International Boulevard corridor, from S. 152nd Street to S. 216th Street, and a construction set

of documents for a City-selected project from the LRSP. The purpose of this plan is to improve safety for different modes of transportation along City roadways by assessing collision and roadway data, identifying risk factors contributing to the collision incidents, identifying countermeasures and strategies, conducting public outreach and developing and prioritizing countermeasures/strategies.

Project benefits

- Plan and design project(s) along International Boulevard in SeaTac that will make it safer for pedestrians to use this transportation and business corridor.
- Create a comprehensive plan that assesses the most critical safety issues for SeaTac's local roadways and proposes specific strategies and countermeasures to address them. At least one safety project in the plan will be designed through construction documents (ready to build).

What's happening now

Phase 1 has begun with data collection and outreach interviews.

Project cost: \$331,716

Schedule

PHASE 1: August 2020 – June 2021

PHASE 2: April – December 2021

NEARBY RELATED PROJECTS

The International Boulevard Pedestrian Safety and Local Road Safety Plan is one of multiple projects the City is doing adjacent to the airport and light rail station over the next few years. These projects are continuations of the visioning and urban design framework project the City undertook last year. In addition to the International Boulevard Pedestrian Safety and Local Road Safety Plan they include:

- SeaTac/Airport Station Area Pedestrian Improvement Project: Which is focused on designing and constructing sidewalk and road improvements near the light rail station along part of S 176th St, 32nd Ave S and S 180th St.
- SeaTac Housing Action Plan: Which will create a plan that identifies how the City can support strategies to increase the supply and type of housing for all income levels throughout the City and specifically near light rail stations.
- Phase 2 Sub-Area Plan for Airport Business District/Station Area: Once funding has been identified, the City will begin Phase 2 of the vision/urban design framework project which will complete a long-term growth and development plan for the airport business district and station area.
