

SEPA ENVIRONMENTAL CHECKLIST & APPLICATION FORM

DEPARTMENT OF COMMUNITY & ECONOMIC DEVELOPMENT

PURPOSE

The State Environmental Policy Act (SEPA), Chapter 43.21C RCW, requires all governmental agencies to consider the environmental impacts of certain proposals before making permitting decisions.

The purpose of this checklist is to provide information to help you and the agency identify impacts from your proposal (and to reduce or avoid impacts from the proposal, if it can be done) and to help the agency decide whether an Environmental Impact Statement (EIS) is required.

An EIS must be prepared for all proposals with probable significant adverse impacts on the quality of the environment.

CITY HALL CONTACT

4800 South 188th Street
SeaTac, WA, 98188
Ph: 206.973.4750

INSTRUCTIONS

This Environmental Checklist asks you to describe some basic information about your proposal. Answer the questions briefly, with the most precise information known, or give the best description you can.

You must answer each question accurately and carefully, to the best of your knowledge. In most cases, you should be able to answer the questions from your observation or project plans without the need to hire experts.

If You Don't Know the Answer

If you really do not know the answer, or if a question does not apply to your proposal, write "do not know" or "*does not apply*". Complete answers to the questions may avoid unnecessary delays later. Some questions ask about governmental regulations, such as zoning, shoreline, and landmark designations. Answer these questions to the best of your ability; or if you have difficulty, the City can assist you.

Staged Development

The Checklist questions apply to all parts of your proposal, even if you plan to do them over a period of time or on different parcels of land. Attach any additional information that will help describe your proposal, or its environmental effects. The City may ask you to explain your answers or provide additional information related to determining if there may be significant adverse impact.

PACKET MATERIALS

This packet is divided into two (2) sections. Both sections must be completed and submitted for review. An incomplete packet will not be accepted for review.

FORM A: Environmental (SEPA)
Application Form

FORM B: Environmental (SEPA)
Checklist

APPLICATION FEE

The application fee is paid at the time of submitting a complete application. This fee is in addition to any other permit related fees.

See SEPA review on fee schedule [CLICK HERE FOR FEE SCHEDULE](#) or find fee schedule at: www.ci.seatac.wa.us/feeschedle

‘SIMPLE’ LAND USE & SEPA REVIEW PROCESS

Pre Application Meeting

An applicant shall have a Pre-Application Meeting with the City before an application is accepted.

Determination of Completeness (DOC)

Upon the City's acceptance of a permit application, you will receive a "Determination of Completeness" (DOC) within 28 days of the submittal of your application stating whether your permit application is complete, not complete or if additional information is required. Note, this process only pertains to permits that require a comment period.

Notice of Application (NOA)

A "Notice of Application" (NOA) will be published and sent to adjacent property owners within 300ft -1,000 ft of the subject property. The NOA will be issued within 14 days after a DOC is issued. There is a 14 day comment period for a NOA. Note, this process only pertains to permits that require a comment period.

Notice Board Posting:

At this time, you will be required to post a "Notice Board" on the property detailing the proposed land use action. An example of the sign and further instructions will be provided to you as part of your NOA Letter.

SEPA Determination Issued

A SEPA determination will be issued shortly after the NOA comment period ends. Notification of the SEPA determination will be in the same manner as a NOA.

14 day comment period & 10 Day Appeal Period Follows

The determination will be published, posted and sent to all parties of record within 300ft-1,000ft of the subject property and to all "Parties of Record". People will have 14 days to make comment, followed by a 10 day appeal period. If no appeals are recieved, the process is complete.

Removal of Notice Board

The "Notice Board" shall be removed within 30 calendar days of the publication of the SEPA Determination.

FORM A: ENVIRONMENTAL (SEPA) APPLICATION FORM

The following materials are the **minimum** materials that must be submitted to review your application to determine that it is complete or incomplete as provided under RCW 36.70B.060 and RCW 36.70B.090.

Please note additional information may be required after review of your proposal.

This form is provided for your benefit and to aid the City in determining if your application contains the minimum information necessary to review your application.

Incomplete submittals will not be accepted or acted upon.

This application also will not be accepted if you have not had a Pre-Application Meeting with the City.

This checklist must be submitted for your application review.

If you have any questions, contact the Department of Community and Economic Development.

For Office Use Only

Date Reviewed: _____

Date of Pre-App Meeting: _____

PLAN SUBMITTAL		Applicant	Staff
1	<i>Completed Environmental Checklist:</i> Original copy.	✓	
2	A check written to the City of SeaTac for the filing fee of the Environmental Checklist.	✓	
3	A dimension Site Plan, drawn to scale (1 in. = 20, 30, 40 ft.) showing the following: <ul style="list-style-type: none"> a) Dimension and shape of lot with adjacent street names b) A legal description of the subject property is provided. c) Location and dimensions of existing and proposed buildings (engineering scale only) including the building height of proposed buildings d) Adjacent street improvements, ingress and egress, parking layout showing the number of stalls and stall sizes e) Required landscaping areas. A detailed landscape plan is not required, however, the site plan must show the dimensioned 'block' areas of landscape to demonstrate the code required landscaping can be accommodated on site. f) Existing water courses, wetlands, utility lines, structures, rockeries or other relevant manmade or natural features, ordinary high water mark g) The gross floor area of buildings h) Parking calculations and dimensioned parking stalls as per Code i) Existing and finished grades at 5' contours j) Location and dimensions of all easements referenced in the title report with the recording number and type of easement (e.g. access, sewer, etc.) k) Proposed storm drainage, sidewalks, conceptual grading and drainage plan l) The location of any recreation/open space with dimensions m) Proposed public dedication/open space (if any) 	✓	

4	<p>Two (2) sets of plans:</p> <ul style="list-style-type: none"> • 24" x 36"; and • 8 1/2" x 11" (reduced version of above plan) <p>Note: All oversized plans folded to 8 1/2" x 14".</p>	✓	
5	Building elevations of the proposal showing two facades at 1"=50', 1"=100' or 1"=200' (<i>engineering scale only</i>)	✓	
6	Drawing and/or text describing the scale, bulk and architectural character of the proposed structure	✓	
7	A text describing conditions or features which cannot be adequately displayed on maps or drawings		
8	A description of plans for covenants, uses and continuous maintenance provisions for the project		
9	Proposed phasing identified		
10	Vehicular and pedestrian circulation and any special engineering features and traffic regulating devices needed to facilitate or insure the safety of this circulation pattern.	✓	

FORM B: ENVIRONMENTAL (SEPA) CHECKLIST

Date Checklist Prepared: 05/05/2022

Parcel No. 344500-0140

A. BACKGROUND

1. Name of proposed project: Seatac Self Storage

2. Applicant:

Name: Insite Property Group
Mailing Address: 19191 S. Vermont Ave., Suite 680
Torrance, CA 90502
City State Zip
Phone: 866-521-8292 Fax: _____
Alt. Phone: _____ Email: bsorensen@insitepg.com
Status: (Owner, Lessee, Agent, Etc.) Contracted Purchaser

3. Designated Contact Person: (The person who will receive and disseminate all correspondence from the City)
Name: Casey Kispert
Mailing Address: 311 1st Ave South
Seattle, WA 98104
City State Zip
Phone: 206-324-4800 Fax: _____
Alt. Phone: _____ Email: casey.kispert@jacksonmain.com

4. Agency requesting checklist: City of Seatac

5. Proposed timing or schedule (including phasing): Spring 2024 completion

6. Do you have any plans for future additions, expansion, or further activity related to or connected with this proposal? If yes, explain:

No expansion is anticipated with the current property.

7. List any environmental information you know about that has been prepared, or will be prepared, directly related to this proposal.

Appendix A - Phase 1 Environmental Report

Appendix B - SEPA Greenhouse Gas Emissions Worksheet

Appendix C - Traffic Impact Analysis

Appendix D - Geotechnical Report

Appendix E - Arborist Report

8. Do you know whether applications are pending for governmental approvals of other proposals directly affecting the property covered by your proposal?

Explain:

No applications are pending at this time

9. List any government approvals or permits that will be needed for your proposal.
Conditional Use Approval, SEPA Approval, Commercial Building Permit(s),
Department of Ecology NPDES Permit, Right of Way Permit, Grading & Drainage
Permits, FAA Review

10. Give a brief, complete description of your proposal, including the proposed uses and the size, with square footage, of the project and site. There are several questions later in this checklist that ask you to describe certain aspects of your proposal. You do not need to repeat those answers on this page.
The applicant is proposing to construct a four-story self-storage facility in Seatac,
WA. The proposed storage building will be four stories w/ basement, type II-B
construction and will reach up to 65 feet from lowest elevation to highest parapet.
The anticipated building area is approximately 160,000 gsf and contain S-1 storage
and accessory caretaker unit and leasing office. All trees in the vicinity of the building
and parking area will be removed. The project is proposing to retain two trees on the
western edge property. Storm water management would occur via on site detention.

11. Location of the proposal. Give sufficient information for a person to understand the precise location of your proposed project, including a street address, and section, township, and range. If a proposal would occur over a range of area, provide the range or boundaries of the site(s). Provide a legal description, site plan, vicinity map, and topographic map. While you should submit any plans required by the agency, you are not required to duplicate maps or detailed plans submitted with any permit applications related to this checklist.

Project is located in the SW quadrant at the intersection of 204th Street and 28th
Ave South.

B. ENVIRONMENTAL ELEMENTS

1. Earth:

- a) General description of the site (article one): Flat, rolling, hilly steep slopes, mountainous, other _____

The site generally slopes down to the southwest with a slope near the center of the site slopping to the south. The site ranges in elevation from approximately 293 feet along much of the west side to about 353 feet in the northeast corner of the site.

- b) What is the steepest slope on the site (approximate percent slope?)
Slopes onsite approach 40%

- c) What general types of soils are found on the site (for example, clay, sand, gravel, peat, muck)? If you know the classification of agricultural soils, specify them and note any agricultural land of long -term commercial significance and whether the proposal results in removing any of these soils.

Soils consists of medium dense to dense silty sand with gravel (weathered glacial till) over dense to very dense silty sand with gravel (unweathered glacial till). Soil will be removed from the site as needed for excavation.

- d) Are there surface indications or history of unstable soils in the immediate vicinity?
Describe:

No indications of unstable soils. Geotechnical report notes criteria for landslide hazard area; however, the site does not meet those characteristics.

- e) Describe the purpose, type and approximate quantities of any filling or grading proposed. Indicate source of fill:

Excavation for both structures will be required. Grading will be required for surrounding parking and landscaping. Fill quantities are expected to be minimal and sourced from onsite excavation as determined suitable by the geotechnical engineer.

- f) Could erosion occur as a result of clearing, construction, or use? Generally describe:
Approved BMPs will be implemented to reduce erosion concern during construction. Limited erosion could occur due to grading and backfilling associated construction. Typical erosion control measures may include, but are not limited to, interceptor ditches, placement of riprap and use of silt fences and siltation/retention ponds to control stormwater runoff.

- g) About what percent of the site will be covered with impervious surfaces after project construction (e.g. asphalt and buildings)?

Approximately 70% of the site will be covered with impervious surfaces.

- h) Proposed measures to reduce or control erosion, or other impacts to the earth, if any.**
Typical erosion control measures may include, but are not limited to, interceptor ditches, placement of riprap and use of silt fences and siltation/retention ponds to control stormwater runoff.

2. Air:

- a) What types of emissions to the air would result from the proposal (i.e. dust, automobile, odors, industrial wood smoke) during construction and when the project is completed? Generally describe and give approximate quantities if known:

The project would generate CO2 emissions during construction and building operation. Engine emissions from haulers, concrete trucks, excavation equipment and other subcontractor vehicles during construction. Dust from vegetation removal, excavation and new landscape installation. Weekly and monthly maintenance vehicle exhaust. The project development could generate as much as 92,230 MTCO2e during the lifespan of the project. Reference Appendix B -SEPA Greenhouse Gas Worksheet.

- b) Are there any off-site sources of emissions or odor that may affect your proposal?**
Generally describe:

No offsite odors are anticipated to affect the proposal

- c) Proposed measures to reduce or control emissions or other impacts to the air:

Dump trucks to be hosed off prior to leaving construction site. Dust from existing building demolition to be controlled with water. Odors from vehicle emissions during construction will be controlled by muffler systems on the vehicles.

3. Water:

a) **Surface**

- 1) Is there any surface water body on or in the immediate vicinity of the site (including year round and seasonal streams, saltwater, lakes, ponds, or wetlands)? Describe type and provide names. If appropriate, state what stream or river it flows into.

The project is approximately 2,000 feet from Angle Lake. Des Moines creek is mapped onsite per King County Imap; however the stream does not appear to be visible onsite.

- 2) Will the project require any work over, in, or adjacent to (within 200 feet) the described waters. Please describe and attach available plans.

No work is expected within 200 feet of listed waters.

- 3) Estimate the amount of fill and dredge material that would be placed in or removed from surface water or wetlands and indicate the area of the site that would be affected. Indicate the source of fill material.

None expected.

- 4) Will the proposal require surface water withdrawals or diversions? Give general description, purpose, and approximate quantities if known.

None expected.

- 5) Does the proposal lie within a 100-year floodplain? Note location on the site plan.

Site is not within a flood zone per survey data.

- 6) Does the proposal involve any discharges of waste materials to surface waters? Describe the type of waste and anticipated volume of discharge.
None anticipated. Liquid waste material will be directed to public sanitary system. Solid waste will be collected by local sanitation purveyor.
-
-

b) Ground Water

- 1) Will groundwater be withdrawn from a well for drinking water or other purposes? If so, give a general description of the well, proposed uses and approximate quantities withdrawn from the well. Will water be discharged to groundwater? Give general description, purpose, and approximate quantities if known.

None anticipated. Project will be sourcing water from the local public utility company.

- 2) Describe waste material that will be discharged into the ground from septic tanks or other sources, if any (for example: domestic sewage; industrial containing the following chemicals; toxic or non-toxic, agricultural; etc.). Describe the general size of the system, the number of such systems, the number of houses to be served (if applicable), or the number of animals or humans the system(s) are expected to serve.

Sanitary waste from both building will be collected separately and transferred to the public sanitary sewer purveyor.

c) Water Runoff (including storm water)

- 1) Describe the source of runoff (including storm water) and method of collection and disposal. (include quantities). Where will this water flow? Will this water flow into other waters? Describe:

Stormwater runoff will be from the roof areas of the proposed buildings, sidewalk, landscape and parking lot areas. Runoff will be collected in catch basins and underground conveyance pipes and routed to an underground detention system. The public conveyance system flows west.

- 2) Could waste materials enter ground or surface waters? Generally describe. Surface water could be contaminated by runoff containing oil and gasoline from parked cars in the parking lot and streets servicing the project. However, surface water runoff will be directed to water quality units prior to entering the on-site infiltration system or being released from the site to the downstream drainage course to minimize surface water contamination.
-

- 3) Does the proposal alter or otherwise affect drainage patterns in the vicinity of the site? If so, describe.
-

The proposal will alter the drainage patterns by collecting and detaining onsite water. Currently onsite water either infiltrates or runs offsite to localized depressions.

- 4) Proposed measures to reduce or control surface, ground, and runoff impacts, if any.

The project includes water quality treatment units and an detention system to reduce, control and treat stormwater runoff from this site.

4. Plants:

- a) **Check the types of vegetation found on the site:**

☒ **Deciduous tree:** ☐ Alder ☒ Maple ☐ Aspen ☒ Other Madrone, Locust, Hawthorn, Crabapple
☒ **Evergreen tree:** ☒ Fir ☒ Cedar ☐ Pine ☒ Other Western Hemlock
☒ **Shrubs**
☒ **Grass**
☐ **Pasture**
☐ **Crop or grain**
☐ **Wet soil plants:** ☐ Water Lily ☐ Eelgrass ☐ Milfoil ☐ Other _____
☐ **Other types of vegetation:** _____

- b) What kind and amount of vegetation will be removed or altered?

All existing trees are to be removed with the exception of trees 447 & 449 as listed in the Appendix E - Arborist Report.

- c) List threatened or endangered species known to be on or near the site.

None anticipated.

- d) Proposed landscaping, use of native plants, or other measures to preserve or enhance vegetation on the site.

Proposed landscaping will consist of native trees and ground cover to reduce the need for extensive irrigation. Planting will compliment building architecture and provide visual screening as required by code.

- e) List all noxious weeds and invasive species known to be on or near the site.

Small saplings, ivy, and blackberry bushes are situated under the canopy of the trees. A large field of thick blackberry bushes is located along the south to southeast portion of the site

5. Animals:

- a) Check any birds and animals which have been observed on or near the site or are known to be on or near the site:

☒ **Birds:** ☐ Hawk ☐ Heron ☐ Eagle ☒ Songbirds ☐ Other _____
☐ **Mammals:** ☐ Deer ☐ Bear ☐ Elk ☐ Beaver ☐ Other _____
☐ **Fish:** ☐ Bass ☐ Salmon ☐ Trout ☒ Herring ☐ Shellfish ☐ Other _____

- b) List any threatened or endangered species known to be on or near the site:

None known.

- c) Is the site part of a migration route? Explain:

None migration patterns are associated with the project site.

- d) Proposed measures to preserve or enhance wildlife:

None expected.

- e) List any invasive animal species known to be on or near the site.

None known.

6. Energy and Natural Resources:

- a) What kinds of energy (electric, natural gas, oil, wood stove, solar) will be used to meet the completed project's energy needs? Describe whether it will be used for heating, manufacturing, etc.

Heating for the self-storage will be a combination of gas and electric fuel sources.

- b) Would your project affect the potential use of solar energy by adjacent properties?
Generally describe:

The project would likely not have an impact on the adjacent northern parcel.

- c) What kinds of energy conservation features are included in the plans of this proposal? List other proposed measures to reduce or control energy impacts:

Project will comply with local energy codes. LED fixtures will be used to reduce light power. Project will consider utilizing a dedicated outdoor air system to provide greater HVAC efficiency.

7. **Environmental Health:**

- a) Are there any environmental health hazards, including exposure to toxic chemicals, risk of fire and explosion, spill, or hazardous waste that could occur as a result of this proposal? Describe:

No environmental health risks are anticipated by the project.

- 1) Describe any known or possible contamination at the site from present or past uses

The property is located within the "Tacoma Smelter Plume" per Appendix A - Phase 1 Environmental Report

- 2) Describe existing hazardous chemicals/conditions that might affect project development and design. This includes underground hazardous liquid and gas transmission pipelines located within the project area and in the vicinity

The Tacoma smelter smokestack emissions dispersed arsenic, lead, and various other heavy metals. Per WA-DOE Website, the subject property is depicted within an area designated as having soils likely to contain concentrations of arsenic between 20 and 40 ppm. Further testing during excavation will be needed to determine concentrations levels.

- 3) Describe any toxic or hazardous chemicals that might be stored, used, or produced during the project's development or construction, or at any time during the operating life of the project.

No toxic material are expected.

- 4) Describe special emergency services that might be required

No special emergency services are anticipated. Police, Fire and ambulance service may be expected during the life of the building.

- 5) Proposed measures to reduce or control environmental health hazards, if any:

No measures are anticipated.

b) Noise:

- 1) What types of noise exist in the area which may affect your project (for example: traffic, equipment, operation, other)?

Typical traffic noise from a urban neighborhood

- 2) What types and levels of noise would be created by or associated with the project on a short time or a long-term basis (for example: traffic, construction, operation, other)? Indicate what hours noise would come from the site.

Construction will produce noise from high impact equipment, machinery and hauling trucks, saws and pneumatic equipment. Noise will occur from 7am to 6pm, Weekdays and some weekends. Once operational, minimal traffic noise at the site will be typical for an urban site. No significant long-term noise impacts anticipated.

- 3) Proposed measures to reduce or control noise impacts:

Construction will be limited to daytime hours to reduce impacts on surrounding properties. All noise generated from construction and operations will be consistent with County noise code and state WACs

8. Land and Shoreline Use:

- a) What is the current use of the site and adjacent properties? Will the proposal affect current land uses on nearby or adjacent properties? If so, describe

Site	Vacant Use, RBX zone
North	Commercial Office, RBX zone
South	Vacant Use, MHP zone
East	Right of Way, Light Railway
West	Right of Way, SR 509

- b) Has the project site been used as working farmlands or working forest lands? If so, describe. How much agricultural or forest land of long-term commercial significance will be converted to other uses as a result of the proposal, if any? If resource lands have not been designated, how many acres in farmland or forest land tax status will be converted to nonfarm or nonforest use?

The project site has not been recently used as farmland

- c) Will the proposal affect or be affected by surrounding working farm or forest land normal business operations, such as oversize equipment access, the application of pesticides, tilling, and harvesting? If so, how:

None anticipated.

- d) Describe any structures on the site:

No existing structures.

- e) Will any structures be demolished?

No

- g) What is the current zoning classification of the site?

Regional Business Mix - RBX

- h) What is the current Comprehensive Plan designation of the site?

RBX

- i) If applicable, what is the current Shoreline Master Program designation of the site?

Not applicable

- j) Has any part of the site been classified as an “environmentally sensitive” area?
Specify:

No environmentally critical areas are listed

- k) Approximately how many people would reside or work in the completed project?
2-3

- l) Approximately how many people would the completed project displace? None

- m) Proposed measures to avoid or reduce displacement impacts:

None

- n) Proposed measures to ensure the proposal is compatible with existing and projected land uses and plans, if any:

Proposed storage building is compatible with existing land uses.

9. **Housing:**

- a) Approximately how many units would be provided? Indicate whether high, middle, or low-income housing.

None

- b) Approximately how many units, if any, would be eliminated? Indicate whether high, middle, or low-income housing.

None

- c) Proposed measures to reduce or control housing impacts.

None

10. Aesthetics:

- a) What is the tallest height of any proposed structure(s), not including antennas; what is/are the principal exterior building material(s) proposed?

Mixed use project will raise to a height of approximately 65'-0. Primary exterior materials will be composite siding, of varying colors and textures, and glazing. Metal siding and concrete will also be used to break down the project massing & composition.

- b) What views in the immediate vicinity would be altered or obstructed?

No existing views would be altered by the proposed building. Existing trees and vegetation currently obscure potential views.

- c) Proposed measures to reduce or control aesthetic impacts:

Modulation of exterior façade, incorporation of different building materials to provide interest. Different fenestration patterns will also provide a rhythm & interest.

11. Light and Glare:

- a) What type of light or glare will the proposal produce? What time of day would it mainly occur?

Lighting will be used to increase site safety and security. It will occur at facility entrances, exterior walking surfaces, and to highlight landscape. The lights will be shielded from shining onto adjacent properties.

- b) Could light or glare from the finished project be a safety hazard or interfere with views?

Lighting is not expected to be a safety hazard and views should be unaffected by lighting.

- c) What existing off-site sources of light or glare may affect your proposal?

None anticipated.

- d) Proposed measure to reduce or control light and glare impacts, if any:

Exterior lights will be directed downwards and will avoid off-site night glare and light pollution.

12. **Recreation:**

- a) Would the proposed project displace any existing recreational uses? Describe:

No recreational uses will be displaced.

- b) Proposed measures to reduce or control impacts on recreation, including recreation opportunities to be provided by the project or applicant:

No recreational uses will be provided for the project.

- c) What designated and informal recreational opportunities are in the immediate vicinity?

Angle Lake Park and Des Moines Creek Trail Park are in the vicinity of the project.

13. **Historic and Cultural Preservation:**

- a) Are there any buildings, structures, or sites, located on or near the site that are over 45 years old listed in or eligible for listing in national, state, or local preservation registers located on or near the site? If so, specifically describe

No.

- b) Are there any landmarks, features, or other evidence of Indian or historic use or occupation? This may include human burials or old cemeteries. Are there any material evidence, artifacts, or areas of cultural importance on or near the site? Please list any professional studies conducted at the site to identify such resources

None known or documented on King County GIS.

- c) Describe the methods used to assess the potential impacts to cultural and historic resources on or near the project site. Examples include consultation with tribes and

the department of archeology and historic preservation, archaeological surveys, historic maps, GIS data, etc

King county imap & parcel data was reviewed to determine potential impacts.
No archeological or cultural impact is expected.

- d) Proposed measures to avoid, minimize, or compensate for loss, changes to, and disturbance to resources. Please include plans for the above and any permits that may be required

Resources are not expected to be impacted by the proposed project. Project team would notify AHJ and Department of Historic Presevation if artifacts were identified.

14. Transportation:

- a) Identify public streets and highways serving the site, and describe proposed access to the existing street system. Show on site plans.

Site is primarily access from 204th Street and S 28th Ave. International Blvd is the primary arterial serving the project.

- b) Is the site currently served by public transit? If not, what is the approximate distance to the nearest transit stop?

The site is approximately 2-3 blocks south of the Angle Lake light rail station. Bus services are available on International Blvd.

- c) How many parking spaces would the completed project have? How many would the project eliminate?

The project will provide 17 parking stalls. None are being eliminated by the proposed project.

- d) Will the proposal require any new roads or streets, or improvements to existing roads or streets, not including driveways? Generally describe (indicate whether public or private):

Improvements will be required along S 204th Street and 28th Ave S.

- e) Will the project use (or occur in the immediate vicinity of) water, rail, or air transportation? Generally describe:

The project is located directly adjacent to Sound Transit elevated railway. Seattle Tacoma International Airport is approximately 1.2 miles north of the project site.

- f) How many vehicular trips per day would be generated by the completed project or proposal? If known, indicate when peak volumes would occur and what percentage of the volume would be trucks (such as commercial and nonpassenger vehicles). What data or transportation models were used to make these estimates?

Approximately 224 (112 inbound & 114 outbound) trips are anticipated. Approximately 23 (11 inbound & 12 outbound) trips are anticipated. ITE generation rates were used to predict traffic volumes. Reference Appendix C - Traffic Impact Analysis.

- g) Proposed measures to reduce or control transportation impacts:

None expected.

- h) Will the proposal interfere with, affect or be affected by the movement of agricultural and forest products on roads or streets in the area? If so, generally describe

No.

15. Public Services:

- a) Would the project result in an increased need for public services (for example: fire protection, police protection, health care, schools, other)? Generally describe:

The new building may increase the need for fire and police protection services.

- b) Proposed measures to reduce or control direct impacts on public services:

Fire alarm system, sprinkler systems, DAS systems for emergency radio coverage.

16. Utilities:

- a) Check utilities currently available at the site:

☒Electricity ☒Natural Gas ☒Water ☒Refuse Service ☒Telephone
☒Sanitary Sewer ☐Septic System ☐Other_____

- b) Describe the utilities that are proposed for the project, the utility providing the service, and the general construction activities on the site or in the immediate vicinity which might be needed:

Electricity & Gas- Provided by Puget Sound Energy

Water - Provided by Highline Water District

Telephone - Provided by Lumen

Sanitary Sewer - Provided by Midway Sewer District

Garbage Service - Provided by Republic Services

Extension of these services to serve the site will be in accordance with the construction guidelines of these utility providers

C. SIGNATURE

The above answers are true and complete to the best of my knowledge, I understand that the lead agency is relying on them to make its decision.

SUBJECT: PHASE I ENVIRONMENTAL SITE ASSESSMENT
PROPOSED SELF-STORAGE FACILITY
20401 28TH AVENUE SOUTH
SEATTLE, WA

Dear Ms. Baek:

At your request and authorization, SALEM Engineering Group, Inc. (SALEM) has conducted this Phase I Environmental Site Assessment (ESA) of the proposed Self-Storage Facility site located at 20401 28th Avenue South in Seattle, Washington (subject property). During the course of this assessment, SALEM identified the following evidence of a Recognized Environmental Condition (REC) in connection with the subject property as defined by ASTM E1527-13:

- According to Washington State Department of Ecology (WA-DOE) records, the subject property is located within an area designated as the "Tacoma Smelter Plume." The Tacoma smelter operated from 1890 to 1986, on the border of North Tacoma and the town of Ruston. The smelter smokestack emissions dispersed arsenic, lead, and various other heavy metals across a 1,000 square-mile area comprising the "Tacoma Smelter Plume." Concentrations of lead- and arsenic-impacted soil can vary from location to location across the plume. Based on the WA-DOE Website, the subject property is depicted within an area designated as having soils likely to contain concentrations of arsenic between 20 and 40 parts per million (ppm). In order to verify the concentrations of various heavy metals, including arsenic, in the subject property's near-surface soils, SALEM recommends conducting a Limited Soils Assessment (LSA).

We appreciate the opportunity to assist you with this project. If you have any questions, or if we may be of further assistance, please do not hesitate to contact our office at (909) 980-6455.

Respectfully submitted,

SALEM Engineering Group, Inc.

Project No. 9-421-1024

PHASE I ENVIRONMENTAL SITE ASSESSMENT**PROPOSED SELF-STORAGE FACILITY
20401 28TH AVENUE SOUTH
SEATTLE, WASHINGTON****1.0 EXECUTIVE SUMMARY**

SALEM Engineering Group, Inc. (SALEM) has conducted a Phase I Environmental Site Assessment (ESA) of the proposed Self-Storage Facility site located at 20401 28th Avenue South in Seattle, Washington (subject property). The subject property comprises one irregular-shaped parcel totaling approximately 1.68 acres located on the southwest corner of 28th Avenue South and South 204th Street in Seattle (King County Assessor's Parcel Number [APN] 344500-0140).

SALEM conducted this Phase I ESA of the subject property in conformance with the American Society for Testing and Materials (ASTM) E1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The U.S. Environmental Protection Agency (USEPA) has determined that the ASTM E1527-13 Standard is consistent with the requirements for conducting an "All Appropriate Inquiry" under 40 C.F.R. Part 312. Thus, this Phase I ESA constitutes All Appropriate Inquiry (AAI) designed to identify Recognized Environmental Conditions (RECs) in connection with the previous ownership and uses of the subject property as defined by ASTM E1527-13 and 40 C.F.R. Part 312.

ASTM E1527-13 Section 1.1.1 *Recognized Environmental Conditions* – The term *recognized environmental conditions* is defined as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term as further defined by ASTM "is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." Conditions determined to be *de minimis* are not *recognized environmental conditions*.

SALEM identified the following evidence of a REC in connection with the subject property as defined by ASTM E1527-13:

- According to Washington State Department of Ecology (WA-DOE) records, the subject property is located within an area designated as the "Tacoma Smelter Plume." The Tacoma smelter operated from 1890 to 1986, on the border of North Tacoma and the town of Ruston. The smelter smokestack emissions dispersed arsenic, lead, and various other heavy metals across a 1,000 square-mile area comprising the "Tacoma Smelter Plume." Concentrations of lead- and arsenic-impacted soil can vary from location to location across the plume. Based on the WA-DOE Website, the subject property is depicted within an area designated as having soils likely to contain concentrations of arsenic between 20 and 40 parts per million (ppm). In order to verify the concentrations of various heavy metals, including arsenic, in the subject property's near-surface soils, SALEM recommends conducting a Limited Soils Assessment (LSA).

2.0 PURPOSE AND SCOPE OF ASSESSMENT

2.1 Purpose

According to ASTM E1527-13, the purpose of this practice is to define good commercial and customary practice in the United States of America for conducting an *environmental site assessment* of a parcel of *commercial real estate* with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products*. As such, this practice is intended to permit a *user* to satisfy one of the requirements to qualify for the *innocent landowner*, *contiguous property owner*, or *bona fide prospective purchaser* limitation on CERCLA liability (hereinafter, the “*landowner liability protections*,” or “*LLPs*”): that is, the practice that constitutes “*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice” as defined at 42 U.S.C. §9601(35) (B).

The Phase I ESA was conducted to identify ‘Recognized Environmental Conditions’ (RECs), ‘Controlled Recognized Environmental Conditions’ (CRECs) and ‘Historical RECs’ (HRECs) as defined by the American Society for Testing and Materials (ASTM) *Designation E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Section 1.1.1 of the ASTM *Designation E1527-13* defines an REC as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.” The term as further defined by ASTM “is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.” Section 3.2.18 defines a CREC as a “recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).” Section 3.2.42 defines HREC as a “past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and land use limitations, institutional controls, or engineering controls).”

2.2 Scope of Work

The objective of the SALEM Phase I ESA scope of work is to provide an evaluation of RECs at the subject property and potential off-site sources. The scope of work for this Phase I ESA conforms to ASTM E1527-13. SALEM was provided authorization to conduct the Phase I ESA by Ms. Annie Baek with InSite Property Group on September 23, 2021, in accordance with the scope of work outlined in SALEM’s Proposal No. P9-421-1568. In fulfillment of the SALEM scope of work for this Phase I ESA, SALEM was retained to perform the following tasks:

- Acquire readily available information regarding land-use history and property development by reviewing historical aerial photographs, pertinent building permit records, historic city directories, as well as reviewing recent and historic topographic land-use maps of the subject property and surrounding area.
- Reviewing readily available local, state and federal regulatory agency databases listed in ASTM E1527-13 and compiled by Environmental Data Resources, Inc. (EDR), including but not limited to CERCLA and NPL lists for sites within one mile of the subject property. State databases were reviewed for sites within one mile of the subject property.

-
- Performing a reconnaissance of the subject property and surrounding areas (up to one-half mile beyond site boundary), with regard to potential off-site sources of degradation to the subject property, which included photograph documentation of subject property conditions, and identification of potential environmental concerns. Interviews with persons knowledgeable of the previous and current ownership and uses of the subject property.
 - Identifying aboveground storage tanks and/or indications of underground storage tanks on-site.
 - In addition to ASTM E1527-13, SALEM recognizes ASTM *Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions* (ASTM E2600-15) as an industry-accepted guideline to determine if a Vapor Encroachment Condition (VEC) exists at the target property. A VES consists of reviewing the Phase I ESA data combined with the application of professional judgment. SALEM evaluates the regulatory agency databases to determine if there are known or suspect contaminated sites within a minimum search distance of the target property. In addition, SALEM attempted to determine whether soil and/or groundwater have been impacted within the critical distances outlined in ASTM E2600-15.
 - Preparing this report of SALEM's findings and recommendations if warranted.

3.0 SITE DESCRIPTION

The subject property comprises one irregular-shaped parcel totaling approximately 1.68 acres (King County APN 344500-0140) located on the southwest corner of 28th Avenue South and South 204th Street at 20401 28th Avenue South in Seattle, Washington. At the time of SALEM's September 28, 2021 site reconnaissance, the subject property comprised undeveloped land covered with native trees and grasses. The subject property is located in Section 4, Township 22 North, Range 4 East, Washington Meridian, United States Geological Survey (U.S.G.S.) 7.5 Minute Topographic Map, Des Moines Quadrangle, dated 2014.

4.0 PHYSIOGRAPHY AND HYDROGEOLOGIC CONDITIONS

The subject property is in the Puget Lowland, which is bounded on the east by the Cascade Range and on the west by the Olympic Mountains. The Puget Lowland is characterized by north-south trending valleys and hills in low relief, with intervening elongated saltwater and freshwater bodies. The western end of the area is a gently sculpted upland that ranges from 300 to 500 feet above mean sea level (MSL), with west-facing slopes that descend to Puget Sound. This area has been termed the Intercity Plateau (Thomas et al., 1997). Small creeks drain westward off the upland into Puget Sound. In the middle and eastern parts of the project area, the uplands reach 400 to 500 feet above MSL and are heavily dissected by streams that flow to the south and drain directly or indirectly into Lake Washington.

The Puget Lowland is underlain at depth by Tertiary-Period volcanic and sedimentary bedrock and is filled to the present-day land surface with glacial and non-glacial sediments deposited during the Quaternary Period (within the last 2 million years) (Yount et al., 1993). Depth to bedrock beneath the project area is estimated to range from 600 feet to more than 1,000 feet (Jones, 1996).

The Quaternary geologic history of the Puget Sound region is dominated by at least six periods of continental glaciation, when much of low-lying northern North America was covered by continental ice sheets more than 1 mile thick in some places. In the project area, the ice was more than 3,000 feet thick. The most recent continental glacier in the Puget Lowland reached its maximum extent just south of Olympia.

During glacial advances, meltwater and ice scoured the underlying soil and rock, reworking and entraining sediment and carrying it south. As the glaciers retreated, they deposited their sediment load over the uncovered landscape. Between glaciations, erosional and depositional processes worked much as they do today. These processes include sedimentation by overbank flooding in alluvial river valleys, development of alluvial fans or deltas where freshwater streams discharge into water bodies, and deposition of fine-grained lacustrine or marine deposits in freshwater lakes and marine waters.

The most recent glacial deposits are associated with the Vashon Stage of the Fraser glaciation, which occurred locally between 12,000 and 16,000 years ago. Because of erosion between cycles and areas of non-deposition, Vashon-age sediments can lie directly on any of the older pre-Fraser glacial or non-glacial sediments, or they can be entirely absent.

The subject property is located within the Puget-Willamette Trough Regional Aquifer System, which is a linear elongated basin stretching from the Canadian border in Washington to central Oregon. Specifically, the subject property is located in an unconsolidated-deposit aquifer which is the principle aquifer type in the Puget Lowlands. Sand and gravel lenses underlain in the area can retain localized productive groundwater (USGS, 1994).

According to the WA-DOE records for a water well located approximately 6,022 feet northeast of the subject property, depth to groundwater was reported to be encountered at approximately 46 feet below ground surface (bgs). Based upon SALEM's topographic map interpretation, the general direction of groundwater flow in the vicinity of the subject property is toward the west-southwest. However, local groundwater level and flow direction may vary due to seasonal fluctuations in precipitation, usage demands, geology, and/or surface topography.

5.0 SITE RECONNAISSANCE

A site reconnaissance, which included a visual observation of the subject property and properties within the subject area, was conducted by SALEM's environmental assessor on September 28, 2021. The objective of the site reconnaissance is to identify RECs, including the storage and handling of hazardous substances and petroleum products on or in the vicinity of the subject property which have the potential to environmentally impact on-site soils, surface water and groundwater.

5.1 Observations

Table I summarizes the visual observations made during our site reconnaissance. A discussion of the physical observations follows Table I. Refer to the Site Map (Figure 1) and color photographs following the text for the locations of the features discussed in this section of the report.

TABLE I
Summary of Observations during Site Reconnaissance

FEATURE	OBSERVED	NOT OBSERVED
Structures (existing)		X
Evidence of past uses		X
Hazardous substances and/or petroleum products (including containers)		X
Aboveground storage tanks (ASTs)		X
Underground storage tanks (USTs) or evidence of USTs		X
Strong, pungent, or noxious odors		X
Pools of liquid likely to be hazardous materials or petroleum products		X
Drums		X

TABLE I (cont'd)
Summary of Observations during Site Reconnaissance

FEATURE	OBSERVED	NOT OBSERVED
Unidentified substance containers		X
Pad-mounted/Pole-mounted transformers/capacitors/other PCB-containing equipment		X
Subsurface hydraulic equipment		X
Heating/ventilation/air conditioning (HVAC)		X
Stains or corrosion on floors, walls, or ceilings		X
Floor drains and sumps		X
Pits, ponds, or lagoons		X
Stained soil and/or pavement		X
Stressed vegetation		X
Waste or wastewater discharges to surface or surface waters on subject property (including stormwater)		X
Wells (irrigation, domestic, dry, injection, abandoned, monitoring wells)		X
Septic Systems		X

The subject property comprises one irregular-shaped parcel totaling approximately 1.68 acres (King County APN 344500-0140) located on the southwest corner of 28th Avenue South and South 204th Street at 20401 28th Avenue South in Seattle, Washington. At the time of SALEM's site reconnaissance, the subject property was observed to be undeveloped land covered with native trees and grasses.

- During visual observations of the subject property, no hazardous substances and/or petroleum products were observed to be stored or handled on the subject property. Exposed surface soils did not exhibit obvious signs of discoloration. No other obvious evidence (vent pipes, fill pipes, dispensers, etc.) of USTs was noted within the area observed. No standing water or major depressions were observed on the subject property. No indications of former structures, such as foundations, were observed on the subject property.

5.2 Adjacent Streets and Property Usage

Table II summarizes the adjacent streets and properties uses observed during the SALEM's site reconnaissance.

TABLE II
Adjacent Streets and Property Use

DIRECTION	ADJACENT STREET	ADJACENT PROPERTY USE
North	South 204 th Street	Alaska Airlines RAD Building (20313 28 th Avenue South)
East	28 th Avenue South	State Highway 99; IHOP Restaurant (20402 International Boulevard)
South	None	Undeveloped
West	None	Undeveloped

Based on the observed uses of the properties located immediately adjacent to the subject property, it is unlikely that significant quantities of hazardous substances and/or petroleum products are stored or handled at the adjoining properties, with the exception of the Alaska Airlines RAD Building adjoining to the north of the subject property.

The Alaska Airlines RAD Building at 20313 28th Avenue South, located adjoining to the north and up-gradient from the subject property, was identified in the EDR-provided Radius Map Report on the UST, NFA, MANIFEST, ICR, ALLSITES, CSCSL, and LUFT databases as having had an unauthorized release of "diesel" reported in May 1995 which impacted "soil only" beneath the facility. The responsible party (RP) began conducting remediation at the site in August 2001 under the regulatory agency supervision of the WA-DOE and a "case closed" designation was granted on October 3, 2011. Based upon various influencing factors including the distance and cross-gradient location of the Alaska Airlines RAD Building LUFT site from the subject property; current regulatory agency status ("case closed"); media impacted

(“soil only”); and the identification of a RP for assessment and remediation costs, the Alaska Airlines RAD Building LUFT site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property.

5.3 Potable Water Source

The water purveyor for the subject property is the City of Seattle Public Utilities (SPU). The SPU’s water quality monitoring is an on-going program with water samples obtained on a regular basis. It is the responsibility of the SPU to provide customers with potable water in compliance with the Washington State Maximum Contaminant Levels (MCLs) for primary drinking water constituents in water supplied to the public. Water sampling was not conducted to verify water quality.

5.4 Sewage Disposal System

SALEM’s research indicates that no sewage disposal systems have historically serviced the subject property.

5.5 Heating and Cooling Source

No structures are located on the subject property. Therefore, no heating or cooling sources exist at the subject property. No documentation of fuel oil use was identified during review of reasonably ascertainable records and no visual evidence of fuel oil use was identified during the site reconnaissance. Therefore, it is unlikely for a former fuel oil UST to have been used at the subject property and for a release to have occurred.

6.0 USER-PROVIDED INFORMATION

A review of a User-provided Title Report and a Phase I ESA User Questionnaire was conducted in order to help identify pertinent information regarding potential environmental impacts associated with the subject property.

6.1 Title Report

On September 23, 2021 a Commitment for Title Insurance Report for the subject property by Chicago Title Company of Washington, dated September 15, 2021 was provided to SALEM Ms. Annie Baek with InSite Property Group. The Commitment for Title Insurance Report was reviewed to identify potential deed restrictions, environmental liens or activity and use limitations (AULs) which may have occurred on or exist in connection with the subject property as indicated by the Commitment for Title Insurance Report. SALEM’s review of the Commitment for Title Insurance Report indicated no deed restrictions, environmental liens or AULs for the subject property. Please refer to Appendix A for a copy of the Commitment for Title Insurance Report.

6.2 Phase I Environmental Site Assessment User Questionnaire

On October 4, 2021, a completed Phase I ESA User Questionnaire was received from Ms. Annie Baek with InSite Property Group. Please refer to Appendix B for a copy of the Phase I ESA User Questionnaire.

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “*Brownfields Amendments*”), the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that “*all appropriate inquiry*” is not complete. The user is asked to provide information or knowledge of the following:

- Environmental cleanup liens that are filed or recorded against the site.
- Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry.
- Specialized knowledge or experience of the person seeking to qualify for the LLPs.

-
- Relationship of the purchase price to the fair market value of the *property* if it were not contaminated.
 - Commonly known or *reasonably ascertainable* information about the *property*.
 - The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation.

According to Ms. Baek, to the best of her knowledge as the user of this Phase I ESA, no on-site treatment or discharge of waste; no on-site leach fields, dry wells, sumps, or disposal ponds; no use, storage, or disposal of hazardous substances and/or petroleum products; no existing or former USTs or ASTs; no hazardous material spills; no buried materials; no domestic, monitoring, or irrigation wells; or any additional items of environmental concern were associated with the subject property. Additionally, Ms. Baek indicated that the purchase price of the subject property reasonably reflects fair market value.

7.0 SITE USAGE SURVEY

In order to assess the subject property's history, SALEM reviewed a Phase I ESA Owner Questionnaire, historical aerial photographs, building department records, city directories, planning department records and SFIMs.

7.1 Phase I Environmental Site Assessment Owner Questionnaire

On September 27, 2021, a Phase I ESA Owner Questionnaire was completed by Mr. Ron Hartson, the current subject property owner. The Phase I ESA Owner Questionnaire is designed to provide pertinent information regarding potential environmental and historical impacts associated with the subject property. Mr. Hartson indicated that he has owned the subject property since 1980. Mr. Hartson indicated that the subject property has always been undeveloped land.

According to Mr. Hartson, to the best of his knowledge, no on-site treatment or discharge of waste; no on-site leach fields, dry wells, sumps, or disposal ponds; no use, storage or disposal of hazardous substances or petroleum products; no existing or former USTs or ASTs; no hazardous material spills; no buried materials; no domestic, monitoring, or irrigation wells; or any additional items of environmental concern were associated with the subject property. Please refer to Appendix C for a copy of the completed Phase I ESA Owner Questionnaire.

7.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property and vicinity dated 1943, 1956, 1965, 1968, 1977, 1980, 1986, 1990, 2006, 2009, 2013, and 2017 were reviewed to evaluate changes in land-use for the subject property. The historical aerial photographs were supplied by EDR. Please refer to Appendix D for a copy of the EDR-provided aerial photographs. A summary of the aerial photography is provided below:

- **1943 Aerial Photograph**
The quality of the 1943 aerial is such that the conditions on the subject property and adjoining properties are not easily discernable. The subject property appears to be undeveloped native land. No structures are visible on the subject property. The adjoining properties appear to be undeveloped native land. What appears to be a road (28th Avenue South) adjoins the subject property to the east, beyond which is undeveloped native land.
- **1956 Aerial Photograph**
The conditions on the subject property and adjoining properties are similar to the 1943 aerial photograph, with the exception of what appears to be a two-lane road (State Highway 99) further east of the subject property.

➤ **1965 Aerial Photograph**

The subject property appears to be undeveloped native land covered with trees and grasses. Undeveloped native land adjoins the subject property to the north and west. 28th Avenue South adjoins the subject property to the east, beyond which is Highway 99 and light industrial development further. What appears to be a mobile home park is observed adjoining to the south of the subject property. An increase in residential development is observed further to the north, east and south.

➤ **1968 Aerial Photograph**

The conditions on the subject property and the adjoining properties are similar to those observed in the 1965 aerial photograph, with the exception of what appears to be the current light industrial development observed to the northeast. An increase in residential development is observed further west.

➤ **1977 Aerial Photograph**

The conditions on the subject property and the adjoining properties are similar to those observed in the 1968 aerial photograph.

➤ **1980 Aerial Photograph**

The conditions on the subject property and adjoining properties to the south and east appear similar to the 1977 aerial photograph. A paved road (South 204th Street) adjoins the subject property to the north, beyond which is a light industrial facility. Undeveloped land and residential development is observed on the adjoining property to the west. An overall increase in residential development is apparent in the subject property vicinity.

➤ **1986 Aerial Photograph**

The conditions on the subject property and adjoining properties appear similar to the 1980 aerial photograph, with the exception of what appears to be the current light industrial structure observed adjoining to the north of the subject property.

➤ **1990 Aerial Photograph**

The conditions on the subject property and all adjoining properties appear similar to the 1986 aerial photograph.

➤ **2006 Aerial Photograph**

The conditions on the subject property and adjoining properties are similar to the 1990 aerial photograph, with the exception of what appears to be the current commercial development further to the east of the subject property.

➤ **2009 Aerial Photograph**

The conditions on the subject property and adjoining properties are similar to the 2006 aerial photograph.

➤ **2013 Aerial Photograph**

The conditions on the subject property and adjoining properties to the north, east and west are similar to the 2009 aerial photograph. The south adjoining property is undeveloped. The mobile home park is no longer visible.

➤ **2017 Aerial Photograph**

The conditions on the subject property and adjoining properties are similar to the 2013 aerial photograph. A paved road (24th Avenue South) is observed further to the west of the subject property.

7.3 Building Department Records Review

On October 4, 2021 a records request was made to the City of Seattle Department of Planning and Development (SDPD) for the subject property address of 20401 28th Avenue South. According to a representative of the SDPD, no building permit records are on file for the subject property. Therefore, no building permits for items of environmental concern including USTs, ASTs, septic systems, demolition or previous structures were on file for the subject property.

7.4 City Directories

On September 23, 2021, SALEM contracted with EDR to provide a City Directory Abstract Report dated 1920 through 2017 for the subject property address of 20401 28th Avenue South, as well as the subject property vicinity. The subject property address was not listed in the City Directory Abstract Report. Please refer to Appendix E for a copy of the EDR-provided City Directory Abstract.

7.5 Sanborn Fire Insurance Maps

SALEM reviews SFIMs to evaluate prior land use at the subject property and adjacent properties. SFIMs typically exist for cities with populations of 2,000 or more, the coverage dependent on the location of the property. On September 23, 2021, SALEM contracted with EDR to provide a Fire Insurance Map Abstract indicating the availability of historic SFIMs for the subject property and adjacent properties as far back as 1867. EDR's search of collections at the Library of Congress, University Publications of America, and various public and local sources revealed no coverage for the subject property and adjacent properties. Please refer to Appendix F for a copy of the EDR-provided SFIM No Coverage Certification.

7.6 Agricultural Chemicals

Review of historical aerial photographs dating to 1943 reveals that the subject property has not been utilized for agricultural purposes. Therefore, the use, storage and application of agricultural chemicals at the subject property are not considered an environmental concern.

7.7 Phase I Environmental Site Assessment Interview - Previous Owner

SALEM attempted to interview the previous owner of the subject property to provide pertinent information regarding potential environmental and historical impacts associated with the subject property. However, a Phase I ESA interview with the previous owner of the subject property was not reasonable ascertainable.

7.8 Previous Environmental Reports

SALEM was not provided with additional environmental reports for the subject property.

8.0 REGULATORY AGENCY RECORDS REVIEW

SALEM conducted a review of regulatory agency records for the purpose of determining if hazardous materials/hazardous wastes have been stored or handled on the subject property and area properties of environmental concern. The most current records available were reviewed.

Washington State Department of Ecology

SALEM's October 4, 2021 review of the WA-DOE database available via the WA-DOE Website which tracks UST, LUSTs and sites undergoing remediation, indicated that no records of USTs, LUST incidents or remediation of contaminated soil or groundwater are on file with the WA-DOE for the subject property. However, according to WA-DOE records, the subject property is located within an area designated as the "Tacoma Smelter Plume." The Tacoma smelter operated from 1890 to 1986, on the border of North Tacoma and the town of Ruston. The smelter smokestack emissions dispersed arsenic, lead, and various other heavy

metals across a 1,000 square-mile area comprising the “Tacoma Smelter Plume.” Concentrations of lead and arsenic-impacted soil can vary from location to location across the plume. Based on the WA-DOE Website, the subject property is depicted within an area designated as having soils likely to contain concentrations of arsenic between 20 and 40 ppm. The location of the subject property within the area designated as the “Tacoma Smelter Plume” presents an REC to the subject property.

Additionally, the following information was available for one adjoining property:

The Alaska Airlines RAD Building at 20313 28th Avenue South, located adjoining to the north and up-gradient of the subject property, was identified as having had an unauthorized release of “diesel” reported in May 1995 which impacted “soil only” beneath the facility. The RP began conducting remediation at the site in August 2001 under the regulatory agency supervision of the WA-DOE and a “case closed” designation was granted on October 3, 2011. Based upon various influencing factors including the distance and cross-gradient location of the Alaska Airlines RAD Building LUFT site from the subject property; current regulatory agency status (“case closed”); media impacted (“soil only”); and the identification of a RP for assessment and remediation costs, the Alaska Airlines RAD Building LUFT site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property. Please refer to Appendix G for copies of pertinent WA-DOE records.

King County Environmental Health Services Division

On September 22, 2021, the King County Environmental Health Services Division (KCEHSD) was contacted regarding records of historical hazardous/flammable permits, hazardous materials handling, registered USTs, and unauthorized releases of hazardous substances and petroleum products for the subject property address of 20401 28th Avenue South. According to the KCEHSD, no records are on file or the subject property.

City of Seattle Fire Department

On September 22, 2021, the City of Seattle Fire Department (SFD) was contacted regarding records of historical hazardous/flammable permits, hazardous materials handling, hazardous/flammable incidents, and/or USTs for the subject property address of 20401 28th Avenue South. According to the SFD, no records are on file for the subject property.

Local Area Tribal Records

According to the EDR Radius Map Report, no tribal records are listed for the subject property or adjoining properties.

8.1 Standard Environmental Record Sources

EDR performed a search of federal, state, and local regulatory agency databases for the subject property and surrounding area. The various search distances as required by ASTM E1527-13 extended up to one mile from the subject property. Several agencies have published documents that list businesses or properties which have handled hazardous materials or hazardous waste, or may have had a documented release of hazardous substances or petroleum products. The databases consulted in the course of this assessment were compiled by EDR on September 23, 2021 and represent reasonably ascertainable current listings. SALEM did not verify the locations and distances of every site listed by EDR. SALEM verified locations and distances of the sites SALEM deemed as having a potential to environmentally impact the subject property. The actual location of the off-site properties identified may differ from the EDR listing. Table III summarizes the listed properties located within the specified ASTM Search Radii. The EDR Radius Map report is included in Appendix H.

0 = No sites in radius identified

--- = Not Searched

The subject property was not identified in the EDR-provided government database report. The following site with a reported release of hazardous substances or petroleum products to the subsurface was reported within a one-eighth-mile radius of the subject property:

- The Alaska Airlines RAD Building at 20313 28th Avenue South, located adjoining to the north and up-gradient from the subject property, was identified in the EDR-provided Radius Map Report on the UST, NFA, MANIFEST, ICR, ALLSITES, CSCSL, and LUST databases as having had an unauthorized release of “diesel” reported in May 1995 which impacted “soil only” beneath the facility. The RP began conducting remediation at the site in August 2001 under the regulatory agency supervision of the WA-DOE and a “case closed” designation was granted on October 3, 2011. Based upon various influencing factors including the distance and cross-gradient location of the Alaska Airlines RAD Building LUFT site from the subject property; current regulatory agency status (“case closed”); media impacted (“soil only”); and the identification of a RP for assessment and remediation costs, the Alaska Airlines RAD Building LUFT site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property.

In general, only hazardous substances and petroleum products released from facilities located approximately up-gradient and within a few hundred feet of the subject property, or in a cross-gradient direction close to the subject property, are judged to have a reasonable potential of migrating to the subject property. This opinion is based on the assumption that hazardous substances and petroleum products generally do not migrate large distances laterally within the soil, but rather tend to migrate with groundwater in the general direction of groundwater flow.

Six orphan sites were identified in the EDR-provided government database report. Based upon SALEM's visual observations made during our site reconnaissance, as well as various influencing factors including approximate distance from the subject property, the orphan sites are deemed to have a low potential to environmentally impact the subject property.

No engineering control sites, sites with institutional controls, or sites with deed restrictions were listed for the subject property, adjoining, or vicinity properties in the EDR-provided government database report.

No Indian reservations or LUSTs on Indian land were reported on the subject property, adjoining, or vicinity properties in the EDR-provided government database report.

The remaining properties identified by EDR within the specified search radius of the subject property, which appeared on local, state, or federally published lists of sites that have had releases of hazardous substances or petroleum products, were determined through SALEM's field observations to be of sufficient distance and/or situated hydraulically cross/down-gradient of the subject property, such that impacts to the subject property are not likely.

9.0 POTENTIAL VAPOR ENCROACHMENT CONDITION

Vapor intrusion is a way by which chemicals in soil and groundwater can migrate into indoor air. Chemical vapors moving up through soil and into a building are a potential source of indoor air contamination and may pose a risk to human health. In evaluating the potential for a vapor encroachment condition (VEC) on the subject property, SALEM attempted to determine if there was information indicating that chemicals of concern were located within the "critical distance", defined as the lineal distance between the nearest edge of a contaminated plume and the nearest target property boundary. Based on ASTM E 2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, the "critical distance" is equal to 100 feet, with the exception of dissolved petroleum hydrocarbons, which have a "critical distance" of 30 feet. If non-aqueous phase petroleum hydrocarbons are present, the 100-foot "critical distance" is utilized.

9.1 Vapor Encroachment Screening

SALEM has performed a Vapor Encroachment Screening (Tier 1) in general accordance with the scope and limitations of ASTM Standard Practice E2600-15 for the subject property. The purpose of this Vapor Encroachment Screening (Tier 1) is to identify the existing or potential Vapor Encroachment Conditions (VEC), as defined by ASTM E2600-15, affecting the subject property. As part of the screening, SALEM has completed the following questionnaire, as duplicated from Section X3 of ASTM E2600-15.

TABLE IV
Vapor Encroachment Questionnaire

QUESTION	RESPONSE	COMMENTS
1. Property Type?	Undeveloped	
2. Are there buildings/structures on the subject property?	No	
3. Will buildings/structures be constructed on the subject property in the future?	Unknown	
4. If buildings exist or are proposed, do/will they have elevators?	N/A	
5. Type of level below grade (existing or proposed)?	N/A	
6. Is there ventilation below grade?	N/A	
7. Sump pumps, floor drains, or trenches (existing or proposed)?	No	
8. Radon or methane mitigation system installed?	N/A	
9. Heating system type (existing or proposed)?	HVAC (proposed)	

TABLE IV (cont'd)
Vapor Encroachment Questionnaire

QUESTION	RESPONSE	COMMENTS
10. Type of fuel energy (existing or proposed)?	Natural Gas (proposed)	
11. Have there ever been any environmental problems at the subject property?	No	
12. Does/will a gas station operate anywhere on the subject property?	No	
13. Do any tenants use hazardous chemicals in relatively large quantities on the subject property?	No	
14. Have any tenants ever complained about odors in the building or experience health-related problems that may have been associated with the building?	N/A	
15. Are the operations (or proposed operations to be performed) on the subject property OSHA regulated?	No	
16. Are there any existing or proposed under-ground storage tanks (USTs) or above-ground storage tanks (ASTs) located on the subject property?	No	
17. Are there any sensitive receptors (children, elderly, people in poor health, etc.) that occupy or will occupy the subject property?	No	

TABLE V
Additional VEC Criteria

QUESTION	RESPONSE	COMMENTS
1. Is the subject property known to have current or past contamination?	No	
2. Is contamination of the subject property suspected?	No	
3. Is an <u>adjacent</u> property known to have current or past contamination which may have impacted the subject property?	No	
4. Is a <u>nearby</u> property known to have current or past contamination which may have impacted the subject property?	No	
5. Is regional groundwater contamination known to exist beneath the subject property?	No	
6. Are you aware of other conditions which may result in vapor intrusion at the subject property?	No	

Based upon the results of SALEM's Tier 1 VES, it is SALEM's opinion that a potential VEC "likely does not exist" at the subject property. As such, no further assessment is recommended.

10.0 BUSINESS ENVIRONMENTAL RISKS

10.1 Asbestos-Containing Building Materials

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. Asbestos is commonly used as an acoustic insulator, thermal insulation, fire proofing and in other building materials. Friable asbestos-containing material (ACM), when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. Non-friable ACM can be crumbled, pulverized, or reduced to powder during machining, cutting, drilling, or other abrasive procedures. Friable ACM is more likely to release fibers when disturbed or damaged than non-friable ACM. Exposure to airborne friable asbestos may result in a potential health risk because persons breathing the air may breathe in asbestos fibers. Continued exposure can increase the amount of fibers that remain in the lung. Fibers embedded in lung tissue over time may cause serious lung diseases including: asbestosis, lung cancer, or mesothelioma. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

During SALEM's site reconnaissance, no structures were observed on the subject property. Therefore, ACMs are not considered an on-site environmental concern at this time.

10.2 Lead-Based Paint

Lead is a highly toxic metal that affects virtually every system of the body. While adults can suffer from excessive lead exposures, the groups most at risk are fetuses, infants and children under 6. The Consumer Product Safety Commission banned the use of lead in paint in 1978. Most manufactures, however, had ceased using lead well before this time. Paint applied after 1978 is not considered suspect LBP. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X," to protect families from exposure to lead from paint, dust, and soil. Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on lead-based paint (LBP) and LBP hazards before the sale or lease of most housing built before 1978. Sellers, landlords, and their agents are responsible for providing this information to the buyer or renter before sale or lease.

According to Section 1017 of Title X, "LBP hazard is any condition that causes exposure to lead from lead-contaminated dust; bare, lead-contaminated soil; or LBP that is deteriorated or intact LBP present on accessible surfaces, friction surfaces, or impact surfaces that would result in adverse human health effects." Therefore, under Title X intact lead-based paint on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. LBP is defined as any paint, varnish, stain, or other applied coating that has 1.0 mg/cm² (or 5,000 µg/g by weight) or more of lead.

During SALEM's site reconnaissance, no structures were observed on the subject property. Therefore, LBP is not considered an on-site environmental concern at this time.

10.3 Radon

Radon is a naturally occurring gaseous substance resulting from the radioactive decay of uranium to radium and then to radon. Uranium is a common element found in many geologic formations and substrates, particularly igneous and metamorphic rocks. Radon has a half-life of only 3.8 days and decays to its daughter elements (polonium 218, polonium 214, bismuth 214, and lead 214). It is these daughter elements that represent the health hazard commonly associated with radon. Radon gas can enter a building through cracks in the foundation and walls and become attached to dust particles and inhaled which could cause damage to human lung tissue. Radon is measured in picocuries per liter of air (pCi/L). The EPA has an established safe radon level of 4 pCi/L.

Based on the EPA Radon Zone Map of Washington, the subject property is located within EPA Zone 3, which has a predicted indoor radon screening of <2 pCi/L. The EDR-provided radon data cites King County has 98% of 1st floor spaces with <4 pCi/L. However, radon levels may vary from one area to another and the only way to accurately assess radon gas levels on the subject property is to conduct a radon gas survey.

10.4 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g. in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding). Mold growths often appear as discoloration, staining, or fuzzy growth on building materials or furnishings and are varied colors of white, gray, brown, black, yellow, and green. In large quantities, molds can cause allergic symptoms when inhaled or through the toxins the molds emit.

During SALEM's site reconnaissance, no structures were observed on the subject property. Therefore, mold is not considered an on-site environmental concern at this time.

11.0 DISCUSSION OF FINDINGS

Historical Uses

The subject property comprises one irregular-shaped parcel totaling approximately 1.68 acres (King County APN 344500-0140) located on the southwest corner of 28th Avenue South and South 204th Street at 20401 28th Avenue South in Seattle, Washington. Review of historical aerial photographs, historical city directories, and interviews reveal that the subject property has been undeveloped native land since at least 1943. No evidence of hazardous material use was identified in the historical review of the subject property. Additionally, the subject property was not listed on any government databases of known or reported releases of hazardous substances or petroleum products to the subsurface.

However, according to WA-DOE records, the subject property is located within an area designated as the “Tacoma Smelter Plume.” The Tacoma smelter operated from 1890 to 1986, on the border of North Tacoma and the town of Ruston. The smelter smokestack emissions dispersed arsenic, lead, and various other heavy metals across a 1,000 square-mile area comprising the “Tacoma Smelter Plume.” Concentrations of lead- and arsenic-impacted soil can vary from location to location across the plume. Based on the WA-DOE Website, the subject property is depicted within an area designated as having soils likely to contain concentrations of arsenic between 20 and 40 ppm. The location of the subject property within the area designated as the “Tacoma Smelter Plume” presents an REC to the subject property. Therefore, in order to verify the concentrations of various heavy metals, including arsenic, in the subject property’s near-surface soils, SALEM recommends conducting a LSA.

Current Uses

At the time of SALEM’s September 28, 2021 site reconnaissance, the subject property comprised undeveloped land covered with native trees and grasses. During visual observations of the subject property, no hazardous substances and/or petroleum products were observed to be stored or handled on the subject property. Exposed surface soils did not exhibit obvious signs of discoloration. No other obvious evidence (vent pipes, fill pipes, dispensers, etc.) of USTs was noted within the area observed. No standing water or major depressions were observed on the subject property. No indications of former structures, such as foundations, were observed on the subject property.

Based on SALEM’s, field observations, and contacts with state and local regulatory agencies, the potential for adverse environmental impacts to the subject property associated with current site use appears to be low and therefore, there is a low potential for RECs to exist in connection with the current use of the subject property.

Adjoining Properties

Based on SALEM’s field observations, review of the EDR Radius Map Report and consultation with state and local regulatory agencies, there does not appear to be RECs in connection with the subject property from adjoining property uses.

11.1 Evaluation of Data Gaps/Data Failure

In accordance with ASTM E1527-13 guidance, data gaps represent a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice. Data failure represents the failure to achieve the historical research objects of this practice even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap. The following is a summary of data gaps encountered in the process of preparing this report including an observation as the presumed significance of that data gap to the conclusions of this assessment.

-
- Some of the intervals between documented sources exceeded five years.
 - Failure to identify land use back to first developed use or 1940, whichever is earlier.

However, taken in consideration with the available information obtained in the course of preparing this report in conjunction with professional experience, there is no evidence to suggest that this data gap might alter the conclusions of this assessment.

12.0 SUMMARY AND CONCLUSIONS

We have performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13 of the proposed Self-Storage Facility site located at 20401 28th Avenue South in Seattle, Washington, the *property*. Any exceptions to, or deletions from, this practice are described in Section 13 of this *report*. During the course of this assessment, SALEM identified the following evidence of a REC in connection with the subject property as defined by ASTM E1527-13:

- According to WA-DOE records, the subject property is located within an area designated as the “Tacoma Smelter Plume.” The Tacoma smelter operated from 1890 to 1986, on the border of North Tacoma and the town of Ruston. The smelter smokestack emissions dispersed arsenic, lead, and various other heavy metals across a 1,000 square-mile area comprising the “Tacoma Smelter Plume.” Concentrations of lead- and arsenic-impacted soil can vary from location to location across the plume. Based on the WA-DOE Website, the subject property is depicted within an area designated as having soils likely to contain concentrations of arsenic between 20 and 40 ppm. In order to verify the concentrations of various heavy metals, including arsenic, in the subject property’s near-surface soils, SALEM recommends conducting a LSA.

13.0 LIMITATIONS

This Phase I ESA Report has been prepared for the exclusive use of **InSite Property Group** and their subsidiaries and affiliates. Unauthorized use of or reliance on the information contained in this report, unless given express written consent by SALEM, **InSite Property Group** is strictly prohibited. The following limitations and exceptions apply:

- The scope of work completed was designed solely to meet the needs of SALEM’s client. SALEM shall not be liable for any unintended usage of this report by another party. In addition, based on the ASTM guidelines, the ESA is only valid if completed within 180 days of an acquisition or the transaction necessitating the ESA.
- No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. This ESA was designed to reduce, but not eliminate the potential for RECs at the subject property, within reasonable limits of time and cost. The ESA is not intended to be exhaustive or all-inclusive and does not represent a guarantee of the identification of all possible environmental risk.
- An ESA is intended to be a non-intrusive investigation and generally does not include sampling or testing of air, soil, water or building materials. No destructive testing was completed and concealed areas, such as behind walls or within machinery, were not accessed. Testing, if any, is designed solely to meet the needs of the ESA, not to meet any local, state or federal regulations and should not be utilized as such.

-
- Information in this report is based on personal interviews, government records, published resources, and various historical documents. Accuracy and completeness of information varies among information sources and is often inaccurate or incomplete. The information utilized in this ESA is from sources deemed to be reliable; however, no representation or warranty is made as to the accuracy thereof. SALEM will have no ongoing obligation to obtain and include information that was not reasonably ascertainable, practically reviewable or provided to SALEM in a reasonable timeframe to formulate an opinion and complete the assessment by the agreed upon due date.
 - Unless specifically identified in the scope of work, the ESA excludes consideration of non-ASTM scope issues including, but not limited to, lead in drinking water, asbestos, lead-based paint, industrial hygiene, health and safety, endangered species, wetlands, indoor air quality, vapor intrusion, electromagnetic fields, biological agents or mold.
 - The ESA includes some information that may be relevant to regulatory compliance, but is not intended and shall not be construed as a compliance audit and cannot be considered a verification of regulatory compliance. While the general environmental setting of the subject property is described, this assessment is not intended to be a formal flood plain or wetland determination, and no warranty is made thereof. Depending on its past, present or future intended use, the property under review may or may not be subject to regulation and permitting under environmental and health and safety laws, such as, but not limited to, the Clean Air Act, the Clean Water Act, the Solid Waste Disposal Act, the Occupational Safety and Health Act, and other federal, state and local regulations. SALEM assumes no responsibility or liability respecting regulatory permitting or compliance issues.
 - Client is advised that if the ESA is obtained with the intent of qualifying the purchaser as an innocent landowner, contiguous property owner, or bona fide prospective purchaser under CERCLA, there will be continuing obligations of due care and responsiveness and additional legal requirements that likely apply to such status. SALEM accepts and undertakes no responsibility as to such requirements and advises that counsel be separately consulted with respect to such requirements.
 - The findings and conclusions presented in this Phase I ESA Report are based on field review and observations and on data obtained from the sources listed in the report. The findings of this report are valid as of the present. The passage of time, natural processes or human intervention on the subject property or adjacent properties and changes in the regulations can cause changed conditions which can invalidate the findings and conclusions presented in this report.

14.0 QUALIFICATIONS

This Phase I ESA was conducted under the supervision or responsible charge of SALEM's undersigned environmental professional with oversight from the undersigned registered professional. The work was conducted in accordance with ASTM E1527-13, generally accepted industry standards for environmental due diligence in place at the time of the preparation of this report, and SALEM's quality-control policies.

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

ALTA COMMITMENT FOR TITLE INSURANCE

Issued By agent:

Commitment Number:

213691-SC

NOTICE

IMPORTANT - READ CAREFULLY: THIS COMMITMENT IS AN OFFER TO ISSUE ONE OR MORE TITLE INSURANCE POLICIES. ALL CLAIMS OR REMEDIES SOUGHT AGAINST THE COMPANY INVOLVING THE CONTENT OF THIS COMMITMENT OR THE POLICY MUST BE BASED SOLELY IN CONTRACT.

THIS COMMITMENT IS NOT AN ABSTRACT OF TITLE, REPORT OF THE CONDITION OF TITLE, LEGAL OPINION, OPINION OF TITLE, OR OTHER REPRESENTATION OF THE STATUS OF TITLE. THE PROCEDURES USED BY THE COMPANY TO DETERMINE INSURABILITY OF THE TITLE, INCLUDING ANY SEARCH AND EXAMINATION, ARE PROPRIETARY TO THE COMPANY, WERE PERFORMED SOLELY FOR THE BENEFIT OF THE COMPANY, AND CREATE NO EXTRACONTRACTUAL LIABILITY TO ANY PERSON, INCLUDING A PROPOSED INSURED.

THE COMPANY'S OBLIGATION UNDER THIS COMMITMENT IS TO ISSUE A POLICY TO A PROPOSED INSURED IDENTIFIED IN SCHEDULE A IN ACCORDANCE WITH THE TERMS AND PROVISIONS OF THIS COMMITMENT. THE COMPANY HAS NO LIABILITY OR OBLIGATION INVOLVING THE CONTENT OF THIS COMMITMENT TO ANY OTHER PERSON.

COMMITMENT TO ISSUE POLICY

Subject to the Notice; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and the Commitment Conditions, Chicago Title Insurance Company, a Florida corporation (the "Company"), commits to issue the Policy according to the terms and provisions of this Commitment. This Commitment is effective as of the Commitment Date shown in Schedule A for each Policy described in Schedule A, only when the Company has entered in Schedule A both the specified dollar amount as the Proposed Policy Amount and the name of the Proposed Insured.

If all of the Schedule B, Part I-Requirements have not been met within one hundred eighty (180) days after the Commitment Date, this Commitment terminates and the Company's liability and obligation end.

**SCHEDULE B, PART I
REQUIREMENTS**

All of the following Requirements must be met:

1. The Proposed Insured must notify the Company in writing of the name of any party not referred to in this Commitment who will obtain an interest in the Land or who will make a loan on the Land. The Company may then make additional Requirements or Exceptions.
2. Pay the agreed amount for the estate or interest to be insured.
3. Pay the premiums, fees, and charges for the Policy to the Company.
4. Documents satisfactory to the Company that convey the Title or create the Mortgage to be insured, or both, must be properly authorized, executed, delivered, and recorded in the Public Records.
5. Additional requirements and/or exceptions may be added as details of the transaction are disclosed to, or become known by the Company.
6. If the Seller or Borrower intends to sign documents required to insure the transaction utilizing a remote online notary, please notify the Company immediately as additional underwriting requirements will need to be satisfied.
7. Furnish recording instructions with the documents to be recorded in this transaction. Said instructions must address each requirement made herein, list any endorsements to be issued with the policy and specify the recording order of any documents furnished.

The Company reserves the right to add additional items or make further requirements after review of the requested instructions prior to recording the documents or issuing any requested endorsement.

The Company also reserves the right to charge any applicable additional fees for any endorsement requested.

**SCHEDULE B, PART I
REQUIREMENTS**
(continued)

8. Payment of the real estate excise tax, if required.

The Land is situated within the boundaries of local taxing authority of the City of SeaTac.

CAUTION: Washington has a graduated excise tax rate for sales occurring on or after 1/1/2020 for most properties, although a flat rate applies to properties formally classified and specially valued as timberland or agricultural land on the day of closing.

The rate of real estate excise tax to a sale on or after 1/1/2020 for properties which are not formally classified and specially valued as timberland or agricultural land is:

State portion: 1.10% on any portion of the sales price of \$500,000 or less;
1.28% on any portion of the sales price above \$500,000, up to \$1,500,000;
2.75% on any portion of the sales price above \$1,500,000, up to \$3,000,000;
3.00% on any portion of the sales price above \$3,000,000;

Local portion: 0.50% on the entire sales price.

An additional \$5.00 State Technology Fee must be included in all excise tax payments.

If the transaction is exempt, an additional \$5.00 Affidavit Processing Fee is required.

Any conveyance document must be accompanied by the official Washington State Excise Tax Affidavit. The applicable excise tax must be paid and the affidavit approved at the time of the recording of the conveyance documents. (NOTE: Real Estate Excise Tax Affidavits must be printed as legal size forms).

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Chicago Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

**SCHEDULE B, PART I
REQUIREMENTS**
(continued)

9. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below.

Limited Liability Company: Echo Four L.L.C.

- a. A copy of its operating agreement, if any, and any and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.
- b. If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendment thereto with the appropriate filing stamps.
- c. If the Limited Liability Company is member-managed a full and complete current list of members certified by the appropriate manager or member.
- d. A current dated certificate of good standing from the proper governmental authority of the state in which the entity was created
- e. If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

10. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below.

Limited Liability Company: SecureSpace Holdings LLC

- a. A copy of its operating agreement, if any, and any and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.
- b. If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendment thereto with the appropriate filing stamps.
- c. If the Limited Liability Company is member-managed a full and complete current list of members certified by the appropriate manager or member.
- d. A current dated certificate of good standing from the proper governmental authority of the state in which the entity was created
- e. If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Chicago Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

Copyright American Land Title Association. All rights reserved.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

**SCHEDULE B, PART I
REQUIREMENTS**
(continued)

11. **TO PROVIDE THE EXTENDED COVERAGE POLICY IDENTIFIED IN SCHEDULE A, GENERAL EXCEPTIONS A THROUGH D WILL BE CONSIDERED WHEN OUR INSPECTION AND REVIEW OF SURVEY IS COMPLETED AND UPON RECEIPT AND REVIEW OF THE COMPLETED OWNER'S AFFIDAVIT.**

If there have been recent improvements on the property within 90 days prior to closing we will require a signed indemnity agreement and a recent financial statement from each indemnitor.

If construction financing is to be insured, please contact the title officer for requirements.

The Company reserves the right to add additional exceptions or make further requirements after review of the property inspection and requested documentation.

12. A completed owner's affidavit (form to be supplied by the Company) will be required in connection with issuance of the policy(ies) shown in Schedule A.

13. The Company will require an ALTA/ACSM LAND TITLE SURVEY if an Owner's Extended Policy is requested. If the owner of the Land the subject of this transaction is in possession of a current ALTA/ACSM LAND TITLE SURVEY, the Company will require that said survey be submitted for review and approval; otherwise, a new survey, satisfactory to the Company, must be prepared by a licensed land surveyor and supplied to the Company prior to the close of escrow.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

14. The Proposed Policy Amount(s) must be increased to the full value of the estate or interest being insured, and any additional premium must be paid at that time. An Owner's policy should reflect the purchase price or full value of the Land. A Loan Policy should reflect the loan amount or value of the property as collateral. Proposed Policy Amount(s) will be revised and premiums charged consistent therewith when the final amounts are approved.

15. For each policy to be issued as identified in Schedule A, Item 2; the Company shall not be liable under this commitment until it receives a designation for a Proposed Insured, acceptable to the Company. As provided in Commitment Condition 4, the Company may amend this commitment to add, among other things, additional exceptions or requirements after the designation of the Proposed Insured.

16. The application for title insurance was placed by reference to only a street address or tax identification number. The proposed Insured must confirm that the legal description in this report covers the parcel(s) of Land requested to be insured. If the legal description is incorrect, the proposed Insured must notify the Company and/or the settlement company in order to prevent errors and to be certain that the legal description for the intended parcel(s) of Land will appear on any documents to be recorded in connection with this transaction and on the policy of title insurance.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Chicago Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

Copyright American Land Title Association. All rights reserved.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

**SCHEDULE B, PART I
REQUIREMENTS**
(continued)

17. If a work of improvement is contemplated, no work is to be commenced or materials delivered to the Land the subject of this transaction prior to the recordation of the loan documents. If work is commenced or materials delivered, the Company reserves the right to add additional items or make further requirements and the closing may be delayed.

END OF REQUIREMENTS

NOTES

The following matters will not be listed as Special Exceptions in Schedule B of the policy. There will be no coverage for loss arising by reason of the matters listed below because these matters are either excepted or excluded from coverage or are not matters covered under the insuring provisions of the policy.

Note A: Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

Note B: Note: FOR INFORMATIONAL PURPOSES ONLY:

The following may be used as an abbreviated legal description on the documents to be recorded, per Amended RCW 65.04.045. Said abbreviated legal description is not a substitute for a complete legal description within the body of the document:

PTN TRACT 19, HOMESTEAD PARK 5 AC TRACTS, VOL 7, PG 88, TGW PTN VAC 26TH AVE S
ADJ

Tax Account No.: 344500-0140

Note C: Note: This [map/plat](#) is being furnished as an aid in locating the herein described Land in relation to adjoining streets, natural boundaries and other land. Except to the extent a policy of title insurance is expressly modified by endorsement, if any, the Company does not insure dimensions, distances or acreage shown thereon.

END OF NOTES

END OF SCHEDULE B, PART I

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Chicago Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

**SCHEDULE B, PART II
EXCEPTIONS**

THIS COMMITMENT DOES NOT REPUBLISH ANY COVENANT, CONDITION, RESTRICTION, OR LIMITATION CONTAINED IN ANY DOCUMENT REFERRED TO IN THIS COMMITMENT TO THE EXTENT THAT THE SPECIFIC COVENANT, CONDITION, RESTRICTION, OR LIMITATION VIOLATES STATE OR FEDERAL LAW BASED ON RACE, COLOR, RELIGION, SEX, SEXUAL ORIENTATION, GENDER IDENTITY, HANDICAP, FAMILIAL STATUS, OR NATIONAL ORIGIN.

The Policy will not insure against loss or damage resulting from the terms and provisions of any lease or easement identified in Schedule A, and will include the following Exceptions unless cleared to the satisfaction of the Company:

GENERAL EXCEPTIONS

- A. Rights or claims of parties in possession, or claiming possession, not shown by the Public Records.
- B. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land.
- C. Easements, prescriptive rights, rights-of-way, liens or encumbrances, or claims thereof, not shown by the Public Records.
- D. Any lien, or right to a lien, for contributions to employee benefit funds, or for state workers' compensation, or for services, labor, or material heretofore or hereafter furnished, all as imposed by law, and not shown by the Public Records.
- E. Taxes or special assessments which are not yet payable or which are not shown as existing liens by the Public Records.
- F. Any lien for service, installation, connection, maintenance, tap, capacity, or construction or similar charges for sewer, water, electricity, natural gas or other utilities, or for garbage collection and disposal not shown by the Public Records.
- G. Unpatented mining claims, and all rights relating thereto.
- H. Reservations and exceptions in United States Patents or in Acts authorizing the issuance thereof.
- I. Indian tribal codes or regulations, Indian treaty or aboriginal rights, including easements or equitable servitudes.
- J. Water rights, claims or title to water.
- K. Any defect, lien, encumbrance, adverse claim, or other matter that appears for the first time in the Public Records or is created, attaches, or is disclosed between the Commitment Date and the date on which all of the Schedule B, Part I—Requirements are met.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Chicago Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

SCHEDULE B, PART II
EXCEPTIONS
 (continued)

6. Any easements or rights of way for existing utilities or other rights of way over those portions of said Land lying within the public right of way abandoned by resolution or ordinance.
7. General and special taxes and charges, payable February 15, delinquent if first half unpaid on May 1, second half delinquent if unpaid on November 1 of the tax year (amounts do not include interest and penalties):
- | | |
|------------------------------|----------------|
| Year: | 2021 |
| Tax Account No.: | 344500-0140-08 |
| Levy Code: | 2231 |
| Assessed Value-Land: | \$1,899,600.00 |
| Assessed Value-Improvements: | \$0.00 |
- General and Special Taxes:
- | | |
|---------|-------------|
| Billed: | \$23,327.69 |
| Paid: | \$11,663.85 |
| Unpaid: | \$11,663.84 |
8. Liability for Sewer Treatment Capacity Charges, if any, affecting certain areas of King, Pierce and Snohomish Counties. Said charges could apply to property connecting to the metropolitan sewerage facilities or reconnecting or changing its use and/or structure after February 1, 1990.
 Please contact the King County Wastewater Treatment Division, Capacity Charge Program, for further information at 206-296-1450 or Fax No. 206-263-6823 or email at CapChargeEscrow@kingcounty.gov.
- * A map showing sewer service area boundaries and incorporated areas can be found at:
<http://www.kingcounty.gov/services/gis/Maps/vmc/Utilities.aspx>
- Unrecorded Sewer Capacity Charges are not a lien on title to the Land.
- NOTE: This exception will not appear in the policy to be issued.
9. The search did not disclose any open mortgages or deeds of trust of record, therefore the Company reserves the right to require further evidence to confirm that the property is unencumbered, and further reserves the right to make additional requirements or add additional items or exceptions upon receipt of the requested evidence.
10. Any unrecorded leaseholds, right of vendors and holders of security interests on personal property installed upon the Land and rights of tenants to remove trade fixtures at the expiration of the terms.

END OF SCHEDULE B, PART II

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Chicago Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

Copyright American Land Title Association. All rights reserved.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

COMMITMENT CONDITIONS**1. DEFINITIONS**

- (a) "Knowledge" or "Known": Actual or imputed knowledge, but not constructive notice imparted by the Public Records.
- (b) "Land": The land described in Schedule A and affixed improvements that by law constitute real property. The term "Land" does not include any property beyond the lines of the area described in Schedule A, nor any right, title, interest, estate, or easement in abutting streets, roads, avenues, alleys, lanes, ways, or waterways, but this does not modify or limit the extent that a right of access to and from the Land is to be insured by the Policy.
- (c) "Mortgage": A mortgage, deed of trust, or other security instrument, including one evidenced by electronic means authorized by law.
- (d) "Policy": Each contract of title insurance, in a form adopted by the American Land Title Association, issued or to be issued by the Company pursuant to this Commitment.
- (e) "Proposed Insured": Each person identified in Schedule A as the Proposed Insured of each Policy to be issued pursuant to this Commitment.
- (f) "Proposed Policy Amount": Each dollar amount specified in Schedule A as the Proposed Policy Amount of each Policy to be issued pursuant to this Commitment.
- (g) "Public Records": Records established under state statutes at the Commitment Date for the purpose of imparting constructive notice of matters relating to real property to purchasers for value and without Knowledge.
- (h) "Title": The estate or interest described in Schedule A.

2. If all of the Schedule B, Part I-Requirements have not been met within the time period specified in the Commitment to Issue Policy, this Commitment terminates and the Company's liability and obligation end.

3. The Company's liability and obligation is limited by and this Commitment is not valid without:

- (a) the Notice;
- (b) the Commitment to Issue Policy;
- (c) the Commitment Conditions;
- (d) Schedule A;
- (e) Schedule B, Part I-Requirements;
- (f) Schedule B, Part II-Exceptions; and
- (g) a counter-signature by the Company or its issuing agent that may be in electronic form.

4. COMPANY'S RIGHT TO AMEND

The Company may amend this Commitment at any time. If the Company amends this Commitment to add a defect, lien, encumbrance, adverse claim, or other matter recorded in the Public Records prior to the Commitment Date, any liability of the Company is limited by Commitment Condition 5. The Company shall not be liable for any other amendment to this Commitment.

5. LIMITATIONS OF LIABILITY

- (a) The Company's liability under Commitment Condition 4 is limited to the Proposed Insured's actual expense incurred in the interval between the Company's delivery to the Proposed Insured of the Commitment and the delivery of the amended Commitment, resulting from the Proposed Insured's good faith reliance to:
 - (i) comply with the Schedule B, Part I-Requirements;
 - (ii) eliminate, with the Company's written consent, any Schedule B, Part II-Exceptions; or
 - (iii) acquire the Title or create the Mortgage covered by this Commitment.
- (b) The Company shall not be liable under Commitment Condition 5(a) if the Proposed Insured requested the amendment or had Knowledge of the matter and did not notify the Company about it in writing.
- (c) The Company will only have liability under Commitment Condition 4 if the Proposed Insured would not have incurred the expense had the Commitment included the added matter when the Commitment was first delivered to the Proposed Insured.
- (d) The Company's liability shall not exceed the lesser of the Proposed Insured's actual expense incurred in good faith and described in Commitment Conditions 5(a)(i) through 5(a)(iii) or the Proposed Policy Amount.
- (e) The Company shall not be liable for the content of the Transaction Identification Data, if any.
- (f) In no event shall the Company be obligated to issue the Policy referred to in this Commitment unless all of the Schedule B, Part I-Requirements have been met to the satisfaction of the Company.
- (g) In any event, the Company's liability is limited by the terms and provisions of the Policy.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Chicago Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

Copyright American Land Title Association. All rights reserved.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

(continued)

6. LIABILITY OF THE COMPANY MUST BE BASED ON THIS COMMITMENT

- (a) Only a Proposed Insured identified in Schedule A, and no other person, may make a claim under this Commitment.
- (b) Any claim must be based in contract and must be restricted solely to the terms and provisions of this Commitment.
- (c) Until the Policy is issued, this Commitment, as last revised, is the exclusive and entire agreement between the parties with respect to the subject matter of this Commitment and supersedes all prior commitment negotiations, representations, and proposals of any kind, whether written or oral, express or implied, relating to the subject matter of this Commitment.
- (d) The deletion or modification of any Schedule B, Part II-Exception does not constitute an agreement or obligation to provide coverage beyond the terms and provisions of this Commitment or the Policy.
- (e) Any amendment or endorsement to this Commitment must be in writing and authenticated by a person authorized by the Company.
- (f) When the Policy is issued, all liability and obligation under this Commitment will end and the Company's only liability will be under the Policy.

7. IF THIS COMMITMENT HAS BEEN ISSUED BY AN ISSUING AGENT

The issuing agent is the Company's agent only for the limited purpose of issuing title insurance commitments and policies. The issuing agent is not the Company's agent for the purpose of providing closing or settlement services.

8. PRO-FORMA POLICY

The Company may provide, at the request of a Proposed Insured, a pro-forma policy illustrating the coverage that the Company may provide. A pro-forma policy neither reflects the status of Title at the time that the pro-forma policy is delivered to a Proposed Insured, nor is it a commitment to insure.

END OF CONDITIONS

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Chicago Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

Copyright American Land Title Association. All rights reserved.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

RECORDING REQUIREMENTS

Effective January 1, 1997, document format and content requirements have been imposed by Washington Law. Failure to comply with the following requirements may result in rejection of the document by the county recorder or imposition of a \$50.00 surcharge.

First page or cover sheet:

3" top margin containing nothing except the return address.

1" side and bottom margins containing no markings or seals.

Title(s) of documents.

Recording no. of any assigned, released or referenced document(s).

Grantors names (and page no. where additional names can be found).

Grantees names (and page no. where additional names can be found).

Abbreviated legal description (Lot, Block, Plat Name or Section, Township, Range and Quarter, Quarter Section for unplatted). Said abbreviated legal description is not a substitute for a complete legal description which must also appear in the body of the document.

Assessor's tax parcel number(s).

Return address (in top 3" margin).

**A cover sheet can be attached containing the above format and data if the first page does not contain all required data.

Additional Pages:

1" top, side and bottom margins containing no markings or seals.

All Pages:

No stapled or taped attachments. Each attachment must be a separate page. All notary and other pressure seals must be smudged for visibility. Font size of 8 points or larger.

Inquire before you wire!

WIRE FRAUD ALERT

This Notice is not intended to provide legal or professional advice.
If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. **DO NOT** use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the number of relevant parties to the transaction as soon as an escrow account is opened.** **DO NOT** send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do **NOT** reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

FIDELITY NATIONAL FINANCIAL PRIVACY NOTICE

Effective January 1, 2021

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (e.g., name, address, phone number, email address);
- demographic information (e.g., date of birth, gender, marital status);
- identity information (e.g. Social Security Number, driver's license, passport, or other government ID number);
- financial account information (e.g. loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;
- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information

We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information

If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (<https://fnf.com/pages/californiaprivacy.aspx>) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.

For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children

The FNF Websites are not intended or designed to attract persons under the age of eighteen (18). We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users

FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans

Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes; Use of Comments or Feedback

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice.

Accessing and Correcting Information; Contact Us

If you have questions, would like to correct your Personal Information, or want to opt-out of information sharing for affiliate marketing, visit FNF's [Opt Out Page](#) or contact us by phone at (888) 934-3354 or by mail to:

Fidelity National Financial, Inc.
601 Riverside Avenue,
Jacksonville, Florida 32204
Attn: Chief Privacy Officer

FIDELITY NATIONAL FINANCIAL CALIFORNIA PRIVACY NOTICE

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This California Privacy Notice explains how we collect, use, and disclose Personal Information, when and to whom we disclose such information, and the rights you, as a California resident ("Consumer"), have regarding your Personal Information ("California Privacy Rights"). Some subsidiaries maintain separate California Privacy Notices or privacy statements. If a subsidiary has a separate California Privacy Notice, it will be available on the subsidiary's website, and this California Privacy Notice does not apply.

Collection of categories of Personal Information:

In the preceding twelve (12) months FNF has collected, and will continue to collect, the following categories of Personal Information from you:

- Identifiers such as name, address, telephone number, IP address, email address, account name, social security number, driver's license number, state identification card, financial information, date of birth, or other similar identifiers;
- Characteristics of protected classifications under California or Federal law;
- Commercial information, including records of personal property, products or services purchased, or other purchasing or consuming histories;
- Internet or other electronic network activity information including, but not limited to browsing history, search history, and information regarding a Consumer's interaction with an Internet website;
- Geolocation data;
- Professional or employment information;
- Education Information.

This Personal Information is collected from the following sources:

- Information we receive from you on applications or other forms;
- Information about your transactions with FNF, our affiliates, or others;
- Information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others;
- Information from the use of our websites and mobile applications.

This Personal Information is collected for the following business purposes:

- To provide products and services to you or in connection with a transaction involving you;
- To perform a contract between FNF and the Consumer;
- To improve our products and services;
- To comply with legal obligations;
- To protect against fraudulent or illegal activity;
- To communicate with you about FNF or our affiliates;
- To maintain an account with FNF or our affiliates;
- To provide, support, personalize, and develop our websites, products, and services;
- As described to you when collecting your personal information or as otherwise set forth in the California Consumer Privacy Act.

Disclosures of Personal Information for a business purpose:

In the preceding twelve (12) months FNF has disclosed, and will continue to disclose, the categories of Personal Information listed above for a business purpose. We may disclose Personal Information for a business purpose to the following categories of third parties:

- FNF affiliates and subsidiaries;
- Non-affiliated third parties, as directed by you;
- Businesses in connection with the sale or other disposition of all or part of the FNF business and/or assets;
- Service Providers;
- Law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order.

Sale of Personal Information:

In the preceding twelve (12) months, FNF has not sold Personal Information. FNF does not sell Personal Information.

Personal Information of minors:

FNF does not knowingly collect the Personal Information of minors.

Right to know:

Consumers have a right to know about Personal Information collected, used, disclosed, or sold. Consumers have the right to request FNF disclose what personal information it collected, used, and disclosed in the past twelve (12) months.

Right to request deletion:

Consumers have a right to request the deletion of their personal information.

Right to non-discrimination:

Consumers have a right not to be discriminated against by exercising their consumer privacy rights. We will not discriminate against Consumers for exercising any of their California Privacy Rights.

Right to use an Authorized Agent:

A Consumer may use an Authorized Agent to submit a request to know or a request to delete his or her information. Should a Consumer utilize an Authorized Agent, FNF will require the Consumer provide the agent written permission to make the request and verify his or her identity with FNF.

To exercise any of your California Privacy Rights, please follow the link "[California Privacy Request](#)" or call Toll Free 888-413-1748.

Upon making a California Privacy Request, FNF will verify the consumer's identity by requiring an account, loan, escrow number, or other identifying information from the consumer.

The above-rights are subject to any applicable rights and obligations including both Federal and California exemptions rendering FNF, or Personal Information collected by FNF, exempt from certain CCPA requirements.

FNF website services for mortgage loans:

Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice describing the categories, sources, and uses of your Personal Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Information. FNF does not share Information collected through the Service Websites, except (1) as required or authorized by contract with the mortgage loan servicer or lender, or (2) as required by law or in the good-faith belief that such disclosure is necessary to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

California Privacy Notice - Effective Date:

This California Privacy Notice was last updated on January 14, 2021.

Contact for more information:

For questions or concerns about FNF's California Privacy Notice and privacy practices, or to exercise any of your California Privacy Rights, please follow the link "[California Privacy](#)," call Toll Free 888-413-1748, or by mail to the below address. We may use your Personal Information for our affiliates (companies owned by FNF) to directly market to you. If you do not want FNF affiliates to directly market to you, visit FNF's "[Opt Out Page](#)" or contact us by phone at (888) 934-3354, or by mail to:

**PHASE I ESA (ASTM E1527-13)
USER QUESTIONNAIRE**

**PROPOSED SELF-STORAGE FACILITY
20401 28TH AVENUE S
SEATTLE, WA 98198**

Date: 10/4/2021 Site Address: _____

Respondent Name: Annie Baek Phone No. (required): 310-780-9616

Company Name & Address: InSite Property Group, 19191 S. Vermont Ave, Ste 680, Torrance, CA 90502

Introduction

“In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfield Revitalization Act of 2001 (the ‘Brownfields Amendments’), the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that ‘all appropriate inquiry’ is not completed” - American Society for Testing and Materials (ASTM) E1527-13 Appendix X3: User Questionnaire

1. Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, tribal, state, or local law?

no

2. Are you aware of any activity use limitations (AULs) such as engineering controls, land use restrictions, or institutional controls that are in place at the subject property and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

no

3. As the user of the Phase I Environmental Site Assessment (ESA), do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjacent property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

no

4. Does the purchase price being paid for the subject property reasonably reflect the fair market value of the subject property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property?

yes

5. Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

A. Do you know the past uses of the subject property?

no, vacant land

B. Do you know of specific chemicals that are present or once were present at the subject property?

no

C. Do you know of spills or other chemical releases that have taken place at the subject property?

no

D. Do you know of any environmental cleanups that have taken place at the subject property?

no

6. As the user of the Phase I ESA, based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of contamination at the subject property?

no

I, the user of this Phase I ESA (or authorized representative of the User), do hereby attest that I have carefully considered the questions herein and have presented answers to the best of my knowledge and ability based upon the Responsibilities of the User as required within ASTM E1527-13 guidance.

Name Annie Baek

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Certified Sanborn® Map Report

09/23/21

Site Name:

Proposed Self-Storage Facility
20401 28th Avenue South
Seattle, WA 98198
EDR Inquiry # 6675291.3

Client Name:

Salem Engineering Group
4729 West Jacquelyn Ave
Fresno, CA 93722
Contact: Richard Mccondichie

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Salem Engineering Group were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 3C5D-4CB0-83D4

PO # NA

Project 9-421-1024

UNMAPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 3C5D-4CB0-83D4

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☒ Library of Congress
- ☒ University Publications of America
- ☒ EDR Private Collection

Limited Permission To Make Copies

Salem Engineering Group (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

20401 28TH AVENUE SOUTH
SEATTLE, WA 98198

COORDINATES

Latitude (North):	47.4187950 - 47° 25' 7.66"
Longitude (West):	122.2984240 - 122° 17' 54.32"
Universal Transverse Mercator:	Zone 10
UTM X (Meters):	552921.1
UTM Y (Meters):	5251725.0
Elevation:	327 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the CSCSL list, as provided by EDR, and dated 04/12/2021 has revealed that there are 13 CSCSL sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the LUST list, as provided by EDR, has revealed that there are 9 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the UST list, as provided by EDR, and dated 05/10/2021 has revealed that there are 7 UST sites within approximately 0.25 miles of the target property.

CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the CSCSL NFA list, as provided by EDR, and dated 04/12/2021 has revealed that there are 5 CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Name: KENWORTH NORTHWEST INC
Address: 20220 INTERNATIONAL BLVD
City: SEATAC
Zip: 98198
Facility ID: 92259897
Site Id: 6517
Decimal Latitude: 47.420411
Decimal Longitude: -122.298154

Tank Name: 1
Tag Number: a5512
Tank Status: Operational
Tank Status Date: 12/10/1999
Tank Install Date: 11/15/1988
Tank Closure Date: Not reported
Capacity Range: 10,000 to 19,999 Gallons
Tank Permit Expiration Date: 11/30/2021
Tank Upgrade Date: 11/15/1988
Tank Spill Prevention: Spill Bucket/Spill Box
Tank Overfill Prevention: Automatic Shutoff (fill pipe)
Tank Material: Dielectric Coated Steel
Tank Construction: Single Wall Tank
Tank Tightness Test: Not reported
Tank Corrosion Protection: Sacrificial Anode
Tank Manifold: Not reported
Tank Release Detection: Automatic Tank Gauging
Tank SFC Type: Galvanic Anode
Pipe Material: Fiberglass
Pipe Construction: Single Wall Pipe
Pipe Primary Release Detection: Automatic Line Leak Detector (ALLD)
Pipe Second Release Detection: Annual Line Tightness Test (LTT)
Pipe Corrosion Protection: Corrosion Resistant
Pipe Pumping System: Pressurized System
Responsible Unit: Northwest
Dispenser/Pump SFC Type: Galvanic Anode
Region: Northwest
Is Active: True
Actual Capacity: 12000
Pipe Install Date: Not reported
Turbine Sump Construction: Not reported
Compartment Number: 1
Stored Substance: Diesel
Used Substance: Motor Fuel for Vehicles
Compartment Capacity: 12000

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HIGHLINE WATER DIST
19863 28TH AVE S
SEATAC, WA 98188
Site 2 of 3 in cluster L

CSCSL **S109556184**
ALLSITES **N/A**
ASBESTOS

Relative: CSCSL:
Higher Name: HIGHLINE WATER DISTRICT
Address: 19863 28TH AVE S
Actual: City,State,Zip: SEATAC, WA 98188
404 ft. Facility ID: 63829649
Region: Northwest
Lat/Long: 47.422939187943 / -122.2981276958
Clean Up Siteid: 9982
Site Status: Cleanup Started
Contaminant Name: Benzene
Alternate Site Names: Highline Water Dist,SHOP & EQUIPMENT YARD,SHOP AND EQUIPMENT
YARD,Sound Transit 28th Ave S
Site Rank: Not reported
Has Institutional Control:Not reported
Past VCP: Not reported
Current VCP: Not reported
Ground Water: Not reported
Surface Water: Not reported
Soil: Remediated-Below
Sediment: Not reported
Air: Not reported
Bedrock: Not reported

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank SFC Type: Sump
Pipe Material: Flexible Piping
Pipe Construction: Single Wall Pipe
Pipe Primary Release Detection: Automatic Line Leak Detector (ALLD)
Pipe Second Release Detection: Annual Line Tightness Test (LTT)
Pipe Corrosion Protection: Corrosion Resistant
Pipe Pumping System: Pressurized System
Responsible Unit: Northwest
Dispenser/Pump SFC Type: Sump
Region: Northwest
Is Active: True
Actual Capacity: 20000
Pipe Install Date: Not reported
Turbine Sump Construction: Not reported
Compartment Number: 2
Stored Substance: Diesel
Used Substance: Motor Fuel for Vehicles
Compartment Capacity: 6000

Name: INTERSTATE 5 76
Address: 20619 MILITARY RD S
City: SEATAC
Zip: 98198

Tank Name: TWO
Tag Number: A4512
Tank Status: Operational
Tank Status Date: 12/10/1999
Tank Install Date: 09/10/1998
Tank Closure Date: Not reported
Capacity Range: 20,000 to 29,999 Gallons
Tank Permit Expiration Date: 12/31/2021
Tank Upgrade Date: 09/10/1998
Tank Spill Prevention: Spill Bucket/Spill Box
Tank Overfill Prevention: Ball Float Valve (vent line)
Tank Material: Fiberglass Reinforced Plastic
Tank Construction: Double Wall Tank
Tank Tightness Test: Not reported
Tank Corrosion Protection: Corrosion Resistant
Tank Manifold: Not reported
Tank Release Detection: Automatic Tank Gauging
Tank SFC Type: Sump
Pipe Material: Flexible Piping
Pipe Construction: Single Wall Pipe
Pipe Primary Release Detection: Automatic Line Leak Detector (ALLD)

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2021	Source: EPA
Date Data Arrived at EDR: 08/04/2021	Telephone: N/A
Date Made Active in Reports: 08/31/2021	Last EDR Contact: 09/01/2021
Number of Days to Update: 27	Next Scheduled EDR Contact: 10/11/2021
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/29/2021	Source: EPA
Date Data Arrived at EDR: 08/04/2021	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/22/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/23/2021	Telephone: (206) 553-1200

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/22/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/23/2021	Telephone: (206) 553-1200
Date Made Active in Reports: 05/19/2021	Last EDR Contact: 09/15/2021

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/22/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/23/2021	Telephone: (206) 553-1200

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/22/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/23/2021	Telephone: (206) 553-1200

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/10/2021	Source: Department of the Navy
Date Data Arrived at EDR: 05/13/2021	Telephone: 843-820-7326
Date Made Active in Reports: 08/03/2021	Last EDR Contact: 08/05/2021
Number of Days to Update: 82	Next Scheduled EDR Contact: 11/22/2021
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 05/17/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/21/2021	Telephone: 703-603-0695
Date Made Active in Reports: 08/11/2021	Last EDR Contact: 08/23/2021
Number of Days to Update: 82	Next Scheduled EDR Contact: 12/06/2021
	Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 05/17/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/21/2021	Telephone: 703-603-0695

State- and tribal - equivalent CERCLIS

CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 04/12/2021

PTAP: PTAP Site Listing

A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

TACOMA/PIERCE COUNTY:

LF TACOMA/PIERCE: Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

GEOCHECK® - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

PROPOSED SELF-STORAGE FACILITY
20401 28TH AVENUE SOUTH
SEATTLE, WA 98198

TARGET PROPERTY COORDINATES

Latitude (North):	47.418795 - 47° 25' 7.66"
Longitude (West):	122.298424 - 122° 17' 54.33"
Universal Transverse Mercator:	Zone 10
UTM X (Meters):	552921.1
UTM Y (Meters):	5251725.0
Elevation:	327 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	6005105 DES MOINES, WA
Version Date:	2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
DES MOINES	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q (decoded above as Era, System & Series)

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Alderwood

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1
2	11 inches	26 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1
3	26 inches	59 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Norma

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
2	9 inches	29 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
3	29 inches	59 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 5.6

Soil Map ID: 3

Soil Component Name: Arents

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil

2	25 inches	59 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1

Soil Map ID: 4

Soil Component Name: Everett

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

3	31 inches	59 inches	very gravelly coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 705 Min: 141	Max: 6.5 Min: 5.6

Soil Map ID: 5

Soil Component Name: Bellingham

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 7.3 Min: 5.6
2	11 inches	59 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 7.3 Min: 5.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

STATE DATABASE WELL INFORMATION

MAP ID	WELL ID	LOCATION FROM TP
BA1817	WALOG1000817833	1/2 - 1 Mile SW
BA1818	WALOG1000817836	1/2 - 1 Mile SW
BA1819	WALOG1000093733	1/2 - 1 Mile SW

This topographic map of the Seattle area features a circular search area centered on a yellow star. The map includes contour lines, street names, and various labeled points (e.g., AX, AY, AU, AV, etc.) within the search area. An inset map shows the location of the search area within the state of Washington.

-
- A horizontal number line representing a distance of 1 mile. It is marked with tick marks at 0, $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, and 1 Miles. The segment between 0 and $\frac{1}{4}$ is highlighted in yellow.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

1992 to 1999 – Park Corporation, Anaheim, California (Senior Project Geologist)
1990 to 1992 – Resna Industries, Irvine, California (Project Geologist)

PROFESSIONAL BACKGROUND

Environmental Engineering: Responsible for overseeing all aspects of Phase II soil, soil vapor, and groundwater environmental projects including client coordination, site and regulatory research, investigation technical approach and design, data analysis, and report preparation. Experience with the design, construction and operation oversight of soil and groundwater treatment systems including air stripper, greensand filtration and carbon-based groundwater treatment, and both carbon and thermal oxidizer-based soil vapor extraction systems; remedial system design, installation, and operation; technical work plan and site assessment report preparation; indoor air sampling, data interpretation, and mitigation; management of projects for petrochemical, law firm, insurance, and metal plating industries; legal defense and toxic tort support; and, extensive knowledge of numerous local, state, and Federal oversight programs.

Mr. Robert has managed environmental assessment and remediation projects in more than 30 states. He commonly supervises field work related to removal of underground storage tanks, soil, soil vapor, and groundwater investigations, vapor intrusion investigations, soil vapor extraction, chemical fixation (in-situ and ex-situ) of metals in soil, and groundwater remediation at commercial and industrial facilities. He interprets field data and compiles work plans, field pilot study programs, health and safety plans, sampling and analysis plans, site assessment reports, remedial action plans, and other technical reports. He has successfully negotiated with numerous regulatory agencies on behalf of clients to achieve no further action determinations and/or work scope reductions at great monetary savings to his clients.

SELECTED PROJECT EXPERIENCE

- Project Manager responsible for oversight of legal defense-related activities in defense of a toxic tort claim and an Imminent and Substantial Endangerment Order against a metal plating facility located in Los Angeles, California. Project-related activities have included research and evaluation of historic uses of the site and adjacent properties, evaluation of data provided by adjacent property owners, soil, soil vapor, and groundwater investigations, indoor air sampling and interpretation, negotiations with regulatory agencies and opposing counsel, performance of a vapor extraction pilot study, and

preparation of work plans, reports, contingency plans, tank integrity assessments, and waste analysis plans.

- Designed, installed, and operated a dual-phase extraction system that utilized over 90 wells to remediate approximately 5 acres of chlorinated hydrocarbon-affected soil and groundwater using a chlorinated oxidizer with acid scrubber.
- Project Manager responsible for oversight of soil and groundwater investigations, Human Health-Based Risk Assessment and Corrective Action Plan preparation, and site closure activities for a former battery recycling facility under a consent order with the Department of Toxic Substances Control (DTSC).
- Management of soil, soil vapor and groundwater assessment, environmental compliance, and remediation activities at several refineries in Washington and California.
- Performed an LNAPL investigation at a refinery utilizing a UVOST/CPT rig and fuel fingerprinting to confirm previous borehole logging results, fill data gaps in the historical understanding of lithology beneath the site, identify the extent of the LNAPL smear zone, evaluate groundwater conditions adjacent to surface water, and to evaluate potential remedial options for LNAPL in the area.
- Performed soil, soil vapor, and UVOST/CPT investigations at a large industrial property to evaluate potential risks to human health and the environment under California Regional Water Quality Control Board (CRWQCB) oversight.
- Completed a fate and transport and remedial objectives evaluation for chlorinated benzene-affected soil and groundwater at a marine support facility located in Seattle, Washington.
- Conducted dual-phase extraction pilot studies, modeled results, prepared corrective action plans, and provided remedial cost estimates for 15 gasoline service stations under a consent order with the CRWQCB.
- Provided engineering review (remediation cost containment, pollution liability, blended finite risk) and claims support to the environmental insurance industry on numerous projects.
- Prepared site investigation work plans, performed soil, soil vapor, and groundwater investigations to define the extent of impacts, prepared Conceptual Site Models, and prepared Remedial Action Plans/Remedial Action Work plans for several metal plating facilities to address volatile organic constituents and metal impacts to affected media under the oversight of the DTSC or CRWQCB.

1. EXECUTIVE SUMMARY

The SeaTac Self-Storage development with 154,391 Square Feet (SF) of mini-warehouse are expected to generate 23 new PM peak-hour trips. With the addition of development traffic, the off-site study intersections will continue to operate at acceptable LOS A during the PM peak-hour and the site accesses will operate at acceptable LOS A. The site is proposing 17 parking spaces of which 5 are loading spaces and will meet the anticipated parking demand. The City of SeaTac has a mitigation fee of \$635 per 1,000 SF of mini-warehouse, the City of SeaTac transportation impact fee is anticipated to be \$98,038.29.

2. INTRODUCTION

Kimley-Horn and Associates, Inc. has been retained to provide a traffic impact study for the proposed SeaTac Self-Storage commercial development comprised of one building which will include 154,391 SF of mini-warehouse. The site is currently vacant. The development site is located south of S 204th Street, west of 28th Avenue S on the southwest corner. The site is proposing one access onto 28th Avenue S approximately 138 feet south of S 204th Street and the main access to S 204th Street approximately 400 feet west of 28th Avenue S. The proposed future build-out is anticipated to be completed and occupied by 2024; therefore, 2024 was used for future analysis to satisfy SEPA requirements. A site vicinity map is included in Figure 1.

Matthew Palmer, responsible for this report, is a licensed professional engineer (Civil) in the State of Washington and member of the Washington State section of ITE.

3. METHODOLOGY & ANALYSIS SCOPING

The trip generation calculations for the site are based on the latest edition of the Institute of Transportation Engineers' (ITE) *Trip Generation, 11th Edition* (2021). The average trip generation rates for ITE Land Use Code 151, Mini-Warehouse were used for the trip generation calculations for the proposed use. The trip distribution is based on peak-hour turning movement counts and local draw areas.

Based on discussions with City Staff, a 2.0-percent annual compounding growth rate is used to account for background traffic growth in the site vicinity. The following intersections were analyzed as a part of this report as well as they type of control at the intersection:

1. International Boulevard at S 204th Street – Signalized
2. 28th Avenue S at S 204th Street – All-Way Stop-Controlled
3. Site Access at S 204th Street – Two-Way Stop-Controlled

The site access has been analyzed during the 2024 future with development conditions.

Traffic congestion is generally measured in terms of level-of-service (LOS). Peak-hour level-of-service was conducted and was determined using the methodology described in the Highway Capacity Manual (HCM), 6th Edition. In accordance with the Manual, road facilities or intersections are rated between LOS A and F, with LOS A being free flow and LOS F being forced flow or over-capacity conditions. A summary of the level-of-service criteria has been included in Table 1. The level-of-service at intersections is measured in terms of average delay per vehicle in seconds. For unsignalized intersections, the level-of-service is determined by the worst case of all the calculated lane groups at the intersection. For signalized intersections, the level-of-service is determined as an average delay for all the entering vehicles. The latest version of *Synchro* software is used to analyze the study intersections.

Table 1: Level of Service Criteria for Intersections

Level of ¹ Service	Expected Delay	Intersection Control Delay (Seconds per Vehicle)	
		Unsignalized Intersections	Signalized Intersections
A	Little/No Delay	≤10	≤10
B	Short Delays	>10 and ≤15	>10 and ≤20
C	Average Delays	>15 and ≤25	>20 and ≤35
D	Long Delays	>25 and ≤35	>35 and ≤55
E	Very Long Delays	>35 and ≤50	>55 and ≤80
F	Extreme Delays ²	>50	>80

The acceptable level of service at principal and minor arterial intersections within the City of SeaTac is level of service E, LOS D for all other roads.

¹ **Source:** *Highway Capacity Manual 6th Edition*.

LOS A: Free-flow traffic conditions, with minimal delay to stopped vehicles (no vehicle is delayed longer than one cycle at signalized intersection).

LOS B: Generally stable traffic flow conditions.

LOS C: Occasional back-ups may develop, but delay to vehicles is short term and still tolerable.

LOS D: During short periods of the peak hour, delays to approaching vehicles may be substantial but are tolerable during times of less demand (i.e. vehicles delayed one cycle or less at signal).

LOS E: Intersections operate at or near capacity, with long queues developing on all approaches and long delays.

LOS F: Jammed conditions on all approaches with excessively long delays and vehicles unable to move at times.

² When demand volume exceeds the capacity of the lane, extreme delays will be encountered with queuing which may cause severe congestion affecting other traffic movements in the intersection.

4. EXISTING CONDITIONS

4.1 Existing Volumes and Level of Service

Existing turning movement counts at the study intersections were obtained by the independent count firm, Idax January 2022. The existing peak-hour turning movement volumes are shown at the study intersections during the PM peak-hour in Figure 2. Based on the existing counts, channelization, and intersection control; the study intersections will operate at acceptable LOS A during the PM peak-hour. The existing level of service for the PM peak-hour is summarized in Table 2. The existing level of service calculations are included in the attachments.

Table 2: Existing Level of Service Summary – PM Peak-Hour

Intersections	Existing Conditions	
	LOS	Delay
1. International Boulevard at S 204 th Street	A	6.2 sec
2. 28 th Avenue S at S 204 th Street	A	7.0 sec

4.2 Collision Data

The latest 5 1/2-year collision history from January 1, 2016 through June 2021 (latest available) data was obtained from WSDOT. The data is summarized in Table 3 below.

Table 3: 5 1/2-Year Collision Frequency – January 1, 2016 to Available 2021

Intersection	Collision Type							Total	Frequency
	Rear-End	At Angle	Opp. Dir.	Sideswipe	Same Dir.	Ped/Cyclist	Fixed Object/Other		
International Blvd at S 204 th St	11	12	3	1	3	2	0	32	5.82
28 th Avenue S at S 204 th St	1	1	0	0	0	0	0	2	0.36

The 5 1/2-year collision rate has been calculated using PM peak-hour volumes and a K-factor of 10 for conversion to average daily traffic. The 5 1/2-year collision rates for the intersections are summarized in Table 4.

Table 4: 5 1/2-Year Collision Rate Calculation

Intersection	PM Peak-Hour Intersection Vol.	K-Factor	Total Collisions	Collision Rate ³
International Blvd at S 204 th St	1,685	10	32	0.95
28 th Avenue S at S 204 th St	38	10	2	2.62

Further safety analysis could be considered when collision frequencies at intersections reach 5.0 collisions per year for unsignalized intersections or 10.0 collisions per year for signalized intersections. Further safety analysis could also be considered when an intersection's collision rate is higher than 1.0 collisions per million entering vehicles. There were no fatality collisions at either of the intersections. The intersection of 28th Avenue S at S 204th Street had the highest collision rate of the study area; this is caused by the low number of PM peak-hour trips through the intersection. The collision frequency is below the threshold that would require additional analysis and there is no trend in the type of collisions over the 5 ½ year time period.

³ The collision rate is based on Million Entering Vehicles.

5. FUTURE CONDITIONS

5.1 Trip Generation

Trip generation calculations for the SeaTac Self-Storage commercial development are based on national statistics contained in ITE's *Trip Generation, 11th Edition* (2021). The average trip generation rates for ITE Land Use Code 151, Mini-Warehouse were used for the trip generation calculations for the proposed use. The SeaTac Self-Storage development with 154,391 SF will generate 224 Average Daily Trips (ADT) and 23 PM peak-hour trips (11 inbound/12 outbound). These trips are personal vehicle-based trips. A Trip Generation summary has been included in Table 5.

Table 5: Trip Generation Summary

SeaTac Self-Storage		Average Daily Trips			PM Peak-Hour Trips		
		Inbound	Outbound	Total	Inbound	Outbound	Total
LUC 151, Mini Warehouse, 154,391 SF	Generation Rate	1.45 trips per Unit			0.15 trips per Unit		
	Splits	50%	50%	100%	47%	53%	100%
	Trips	112	112	224	11	12	23

The trip generation calculations have been included in the attachments.

5.2 Trip Distribution

The development's trip distribution is based on counts performed in the site vicinity and local residential and commercial draw areas. It is anticipated that 35% of the site traffic will travel to and from the north along International Boulevard and another 45% will travel to and from the south on International Boulevard. Another 10% will travel to/from the west along S 200th Street. The remaining 10% will travel to and from the east along S 204th Street. The PM peak-hour trip distribution is included in Figure 3.

PM PEAK-HOUR

5.3 2024 Baseline Volumes and Level of Service

The 2024 baseline (future without development) turning movement volumes are estimated by applying a 2.0% annual compounding growth rate to the existing turning movement volumes. With the addition of baseline growth, the study intersections will continue to operate at acceptable LOS A during the PM peak-hour. The 2024 baseline turning movement volumes are shown in Figure 4. The 2024 baseline level of service results for the PM peak-hour are summarized in Table 6.

5.4 2024 Future with Development Volumes and Level of Service

The 2024 future with development turning movement volumes are calculated by adding all the development traffic based on the trip distribution to the 2024 baseline turning movement volumes. The 2024 future with development turning movement volumes for the PM peak-hour are shown in Figure 5. With the addition of development traffic, the off-site study intersections will continue to operate at acceptable LOS A during the PM peak-hour. The 2024 future with development level of service results for the PM peak-hour are summarized in Table 6. The 2024 future with development level of service calculations are included in the attachments.

Table 6: 2024 Future Level of Service Summary

Intersections	Existing Conditions		2024 Future Conditions			
			Without Development		With Development	
	LOS	Delay	LOS	Delay	LOS	Delay

6. ACCESS ANALYSIS

28th Avenue S has a posted speed limit of 25 mph. The City of SeaTac utilizes the King County Road standards to evaluate sight distance. King County Road standards have a stopping sight distance of 155 feet and entering sight distance of 280 feet for a 25-mph design speed.

The access onto S 204th Street is approximately 400 feet west of the 28th Avenue S and the access to 28th Avenue S is located approximately 138 feet south of S 204th Street. The access to S 204th Street will have over 300 feet of stopping and entering sight distance to the east of the access and to the west of the access there is clear sight distance to the end of the roadway. 28th Avenue S access and roadway construction will need to provide clear sight distance to the intersection of 28th Avenue S at S 204th Street. Therefore, the development's accesses should meet sight distance requirements.

7. MITIGATION FEES

The City of SeaTac bases their mitigation fees on the number of new PM peak-hour trips generated and has set a fee for mini-warehouse developments of \$635 per 1,000 SF. The 154,391 SF of development will have a City of SeaTac transportation impact fee of \$98,038.29.

GEOTECHNICAL ENGINEERING REPORT

PROPOSED SELF-STORAGE PROJECT
20401 28TH AVENUE SW
SEATAC, WASHINGTON

ZGA Project No. 2514.01
December 15, 2021

Prepared for:
Insite Property Group

Prepared by:

ZipperGeo
Geoprofessional Consultants

ZGA Project No. 2514.01

December 15, 2021

InSite Property Group
19191 S Vermont, Suite 680
Torrance, CA 90502

Attention: Mr. Brian Sorenson

Subject: Geotechnical Engineering Report
Proposed Self-Storage Project
20401 28th Avenue SW
SeaTac, Washington

Dear Mr. Sorenson,

In accordance with your written authorization, Zipper Geo Associates, LLC (ZGA) has completed the subsurface evaluation and geotechnical engineering report for the above-referenced project. This report presents the findings of the subsurface evaluation and geotechnical recommendations for the project. Our work was completed in general accordance with our *Proposal for Geotechnical Engineering Services* (Proposal No. P21267) dated September 29, 2021, and Addendum 1 to our original contract agreement dated November 19, 2021. Authorization to proceed was provided by InSite Property Group, LLC on October 5, 2021 and the addendum was approved on November 29, 2021. We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report, or if we may be of further service, please contact us.

Sincerely,
Zipper Geo Associates, LLC

Tanner Wagoner, E.I.T.
Staff Engineer

Thomas A. Jones, P.E.
Senior Consultant

**GEOTECHNICAL ENGINEERING REPORT
PROPOSED SELF-STORAGE PROJECT
20401 28TH AVENUE SW
SEATAC, WASHINGTON**

**Project No. 2514.01
December 15, 2021**

1.0 INTRODUCTION

This report presents the results of our subsurface evaluation and our geotechnical engineering conclusions and recommendations for a proposed self-storage project in SeaTac, Washington. Supporting data including detailed boring logs and results of laboratory testing are presented as appendices.

Our geotechnical engineering scope of services for the project included a literature review, site reconnaissance, subsurface evaluation, laboratory testing, geotechnical engineering analysis, and preparation of this report. The subsurface evaluation consisted of completing six exploratory borings (B-1 through B-6) at the site. The borings extended to approximate depths from 25 and 30 feet below the ground surface (bgs).

1.1 Site Description

The project site is comprised of an approximate 1.77 acre, undeveloped parcel located along S. 204th Street in SeaTac, King County, Washington. However, based on historical aerial photographs that ZGA reviewed, it appears that portions of the site have been developed in the past. Buildings appeared to front S. 204th Street and 28th Ave. South. Large spaces appeared to have been cleared as part of the developments. The site is bordered to the north by S. 204th Street and a commercial building beyond, to the east by new construction for Sound Transit Link Light Rail, to the south by an undeveloped parcel that historically appeared to be a mobile home neighborhood, and to the west by a small section of an undeveloped parcel with the 24th Ave South overpass beyond. The site generally slopes down to the southwest with a slope near the center of the site slopping to the south. The site ranges in elevation from approximately 293 feet along much of the west side to about 353 feet in the northeast corner of the site.

1.2 Project Understanding

At the time of preparing this report, we understand the proposed project will consist of constructing a 155,296 square foot, self-storage facility with 5 levels over a daylighted basement level. We understand the Level 1 finish floor elevation is currently proposed at 317.25 feet and each level will be 11 feet tall. An undated progress site plan (Sheet A1.00 by Jackson Main Architects) provided to us indicates that parking will be situated along the west end of the building and loading/unloading zones will be situated on the south side of the building. The western loading zone will be situated at the Level 2 elevation while the eastern loading zone will be situated at the Level 3 elevation. It appears that a retaining wall will be situated along the south and west sides of the site and will vary in exposed height from a few feet up to a maximum of about 18 feet. A stormwater detention vault is proposed along the west side of the parking lot.

2.0 SURFACE AND SUBSURFACE CONDITIONS

2.1 Published Geologic Information

According to the U.S. Geological Survey *Lidar-revised geologic map of the Des Moines 7.5 minute quadrangle, King County, Washington*, Scientific Investigations Map SIM-3384, by Tabor and Booth, 2017, the site is mapped as being mantled by Glacial Till (Qvt). This material is described as a mixture of clay, silt, sand, and gravel with occasional boulders.

2.2 Surface Conditions

Maple, madrone, and evergreen trees currently cover most of the site, with trunks reaching up to about 2½ feet in diameter. Small saplings, ivy, and blackberry bushes are situated under the canopy of the trees. A large field of thick blackberry bushes is located along the south to southeast portion of the site.

2.3 Soil Conditions

Figure 1, Site and Exploration Plan, presents the approximate locations of the completed borings for this project. Soils were visually classified in general accordance with the Unified Soil Classification System. Detailed, descriptive logs of the subsurface explorations and the procedures utilized in the subsurface exploration program are presented in Appendix A. In general, the explorations encountered native soils or undocumented fill over native soil deposits. Generalized descriptions of these deposits are presented below.

Topsoil and Forest Duff: Forest duff and organic-rich topsoil was encountered in all of the borings. The topsoil varied in thickness from approximately 7 to 12 inches. The material generally consisted of silty sand and sandy silt with substantial roots and organics.

Undocumented Fill: Soils interpreted as undocumented fill were encountered in borings B-2 and B-3 beneath the forest duff and topsoil and extended to depths of approximately 4½ feet below existing grades. The fill consisted of loose silty sand with gravel that appeared to be compositionally similar to native soils. Based on the topographic map of the site, it appears that grading may have taken place across the site and the presence and extent of loose undocumented fill will not be known until the earthwork phase of the project.

Glacial Till: Normally, the typical glacial till sequence in the Puget Sound region consists of medium dense to dense silty sand with gravel (weathered glacial till) over dense to very dense silty sand with gravel (unweathered glacial till). Weathered glacial till commonly is mottled with orange iron oxide staining due to the development of perched groundwater above the interface with the denser, less permeable unweathered glacial till.

Soils interpreted to be weathered glacial till were encountered beneath the fill in boring B-2 and beneath the forest duff/topsoil in boring B-4. The dense to very dense weathered glacial till was approximately 4½

and 3½ feet thick in borings B-2 and B-4, respectively, and extended to depths of approximately 9 and 4½ feet below existing grades.

Advance Outwash or Pre-Fraser Sand and Gravel Deposit: Very dense, sandy gravel and gravelly sand with varying proportions of silt was encountered beneath the glacial till in all of the borings. This material consisted primarily of coarse sand and gravel that was typically less than 1 inch in diameter. This material was encountered in borings B-1 through B-6 at approximate depths of 23½ feet (el. 316½ ft), 27½ feet (el. 310½ ft), 28 feet (el. 286 ft), 19 feet (el. 299 ft), 13 feet (el. 289 ft), and 9½ feet (el. 295½), respectively, and extended to the bottom of the borings.

Soil types and conditions can vary between explorations. The nature and extent of variations between the explorations may not become evident until construction. Stratification boundaries on the exploration logs represent the approximate depth of changes in soil types, although the transition between materials may have been gradual. If variations become apparent during construction, it may be necessary to reevaluate the recommendations of this report.

In boring B-6, soil samples between approximately 10 and 16½ feet had a slight petroleum hydrocarbon odor. We sent a portion of sample S-5 (15 to 16½ feet) to an analytical lab to test for NWTPH-HCID, NWTPH-Gx, NWTPH-Dx/Dx, and VOCs by EPA 8260. This sample appeared to have the greatest hydrocarbon odor. We supplied the results to InSite Property Group and their environmental consultant (Salem Engineering Group) via email on November 29, 2021.

2.4 Groundwater Conditions

Groundwater was encountered at the time of drilling at depths ranging from about 13 to 29 feet below the ground surface in borings B-1, B-2, B-4, B-5, and B-6. Additionally, we encountered wet soil, indicating that perched groundwater may be present in the weathered glacial till from about 2½ to 7 feet in boring B-1. Groundwater monitoring wells were installed in borings B-5 and B-6 to monitor the groundwater levels through the wet winter months in order to estimate a seasonal high groundwater level in the event that stormwater infiltration is considered feasible. We will be monitoring groundwater in borings B-5 and B-6 during the wet season (Oct. 30 through Apr. 1) in accordance with the King County Surface Water Design Manual. On December 8, 2021, we measured the groundwater levels in borings B-5 and B-6. The depth to groundwater and corresponding elevation in borings B-5 and B-6 was 13 feet (el. 289 ft) and 8.7 feet (el. 296.3 ft), respectively.

Groundwater levels, flow rates and soil moisture conditions should be expected to vary throughout the year. Fluctuations of the groundwater levels will likely occur due to seasonal variations in the amount of rainfall, runoff and other factors not evident at the time the explorations were performed. Therefore, groundwater levels during construction or at other times in the life of the development may be higher than indicated on the logs.

3.0 CONCLUSIONS AND RECOMMENDATIONS

3.1 General

Based on the results of our subsurface evaluation, laboratory testing, and geotechnical engineering analyses, in our opinion the proposed project appears feasible from a geotechnical engineering standpoint and the building can be supported on shallow foundations bearing on the native glacial till soils. However, at this time, it appears that the eastern portion of the Level 1 bottom of footing elevation (approx. el. 315 ft.) will be about 0 to 1 foot above the measured groundwater levels in borings B-1 and B-2. Therefore, the need for temporary and permanent dewatering should be considered given that groundwater levels could fluctuate over time. At the time of preparing this report, the planned Level 1 finish floor elevation is 314.0 feet and we have assume that the bottom of footing elevation will be about elevation 312 feet.

The following sections of this report present geotechnical recommendations for the project. Our recommendations are based on the observed soil conditions at specific exploration locations. Differing soil conditions than those observed at the boring locations may become evident during construction. Our recommendations are further based on the assumption that earthwork for site grading, utilities, foundations, floor slabs, temporary shoring, and pavements will be monitored by a geotechnical engineer from ZGA.

3.2 Seismic Design Considerations

The seismic performance of the development was evaluated relative to seismic hazards resulting from ground shaking associated with a design seismic event with a 2,475-year return period determined in accordance with the 2018 International Building Code (IBC).

3.2.1 Ground Fault Rupture

Based on review of the Washington State Department of Natural Resources Geologic Hazards interactive map, the nearest fault zone to the site is the Tacoma fault zone. The nearest mapped trace of this fault is approximately 5½ miles south of the site. Based on the information described above, we estimate that the risk associated with fault surface rupture at the site is low.

3.2.2 Liquefaction

Liquefaction is a phenomenon wherein saturated cohesionless soils build up excess pore water pressures during earthquake loading. Liquefaction typically occurs in loose soils but may occur in denser soils if the ground shaking is sufficiently strong. Based on the dense to very dense conditions encountered at the site, the risk of liquefaction at the site is negligible due to the high relative density of the native soil.

3.2.3 IBC Seismic Design Parameters

The 2018 IBC indicates that the seismic site classification is based on the average soil and bedrock properties in the top 100 feet. To determine the Site Class, we used the data from boring B-3. The current scope does not include a 100-foot soil profile determination. The seismic site class definition recommended in the following table considers that soils encountered at depth in our borings continue

below the termination depth. Per the 2018 IBC seismic design procedures and ASCE 7-16, we recommend using Site Class C for seismic design.

IBC Seismic Design Criteria	
Parameter	Value
2018 International Building Code Site Classification (IBC)	Site Class C
Site Latitude/Longitude	47.4187 / -122.2987
MCE _G Peak Ground Acceleration, PGA	0.608
Site Amplification Factor at PGA, F _{PGA}	1.2
Site Modified Peak Ground Acceleration, PGA _M	0.729
Spectral Short-Period Acceleration, S _s	1.432g
Spectral 1-Second Acceleration, S ₁	0.488g
Site Coefficient for a Short Period, F _a	1.2
Site Coefficient for a 1-Second Period, F _v	1.5
Spectral Acceleration for a 0.2-Second Period, S _{M5}	1.719g
Spectral Acceleration for a 1-Second Period, S _{M1}	0.733g
Design Short-Period Spectral Acceleration, S _{D5}	1.146g
Design 1-Second Spectral Acceleration, S _{D1}	0.488g

3.3 Environmental Critical Areas

Chapter 17.05 of the SeaTac Municipal Code (STMC) presents definitions of critical areas that are considered by the City during the development review process. Critical areas are designated into many categories. This report will address erosion hazard areas, landslide hazard areas, seismic hazard areas, steep slope hazard areas, and wellhead protection.

3.3.1 Erosion Hazard Areas

Erosion hazards are not specifically defined in the STMC, although they need to be addressed if identified on a site. According to the City of SeaTac Erosion Hazard Areas Map, erosion hazard areas are particularly susceptible to increased erosion as a result of development. No portion of the site is mapped as an erosion hazard area.

According to King County Code 21A.06.415, Erosion Hazard Area, an erosion hazard area is an area underlain by soils that is subject to severe erosion when disturbed. These soils include, but are not limited to, those classified as having a severe to very severe erosion hazard according to the United States Department of Agriculture Soil Conservation Service, the 1990 Snoqualmie Pass Area Soil Survey, the 1973 King County Soils Survey or any subsequent revisions or addition by or to these sources such as any occurrence of River Wash ("Rh") or Coastal Beaches ("Cb") and any of the following when they occur on slopes inclined at fifteen percent or more:

- A. The Alderwood gravelly sandy loam ("AgD");
- B. The Alderwood and Kitsap soils ("AkF");
- C. The Beausite gravelly sandy loam ("BeD" and "BeF");

- D. The Kitsap silt loam ("KpD");
- E. The Oval gravelly loam ("OvD" and "OvF");
- F. The Ragnar fine sandy loam ("RaD"); and
- G. The Ragnar-Indianola Association ("RdE").

Based on our evaluation, the site is underlain by the Alderwood gravelly sandy loam (Glacial Till). The 1973 King County Soil Survey indicates that for slopes less than 15 percent, the erosion hazard is slight, while for slopes greater than 15 percent, the erosion hazard is severe. Therefore, much of the site meets the definition of an erosion hazard. We recommend that site grading be completed during drier periods of the year (June through October) if possible. We recommend that the Temporary Erosion and Sedimentation Control Plan be developed based on the topography of the site.

3.3.2 Steep Slope Hazard Areas

According to the STMC, steep slope hazard areas are those areas in the City on slopes of forty percent (40%) or greater within a vertical elevation change of at least twenty (20) feet. A slope is delineated by establishing its toe and top and is measured by averaging the inclination over at least ten (10) feet of vertical relief.

According to King County Code 21A.06.1230, Steep Slope Hazard Area, a steep slope hazard area is an area on a slope of forty percent inclination or more within a vertical elevation change of at least ten feet. For the purpose of this definition, a slope is delineated by establishing its toe and top and is measured by averaging the inclination over at least ten feet of vertical relief. Also, for the purpose of this definition:

A. The "toe" of a slope means a distinct topographic break in slope that separates slopes inclined at less than forty percent from slopes inclined at forty percent or more. Where no distinct break exists, the "toe" of a slope is the lower most limit of the area where the ground surface drops ten feet or more vertically within a horizontal distance of twenty five feet; and

B. The "top" of a slope is a distinct topographic break in slope that separates slopes inclined at less than forty percent from slopes inclined at forty percent or more. Where no distinct break exists, the "top" of a slope is the upper-most limit of the area where the ground surface drops ten feet or more vertically within a horizontal distance of twenty-five feet.

According to the City of SeaTac Steep Slopes Map, the site contains slopes or is adjacent to slopes that exceed 40 percent. The topographic survey provided to us indicates that one slope in the southeastern portion of the site exceeds 40 percent and has a maximum height of approximately 10 feet. There are also slopes along the south property line that exceed 40 percent and are generally 10 feet or less in height. These appear to have been created as a result of past grading on the neighboring site to the south.

Based on the King County criteria, it appears that the slopes do not meet the definition of a steep slope because they appear to be less than 10 feet tall. However, we recommend that the slopes along the south

side of the site be addressed with the City in order to determine if a setback is required from the top of these slopes. It appears that the stability of the proposed retaining wall along the south side of the site could be affected given the presence of the slopes immediately south of the wall. Based on our review of Steep Slope Area Buffers in Section 15.700.270 of the STMC, it appears that the required buffer from the top of any slope 40 percent or steeper is 50 feet. This can be reduced to as little as 10 feet, which in our opinion would be adequate for the slope configurations at the site. However global stability analysis should be completed based on the final wall location and configuration.

3.3.3 Landslide Hazard Areas

Landslide hazards are not specifically defined in the STMC, although they need to be addressed if identified on a site. According to the City of SeaTac Landslide Hazard Areas map, no portion of the site is mapped within a landslide hazard area.

According to King County Code 21A.06.680, Landslide Hazard Area, a landslide hazard area is an area subject to severe risk of landslide, such as:

- A. An area with a combination of:
 - 1. Slopes steeper than fifteen percent of inclination;
 - 2. Impermeable soils, such as silt and clay, frequently interbedded with granular soils, such as sand and gravel; and
 - 3. Springs or ground water seepage;
- B. An area that has shown movement during the Holocene epoch, which is from ten thousand years ago to the present, or that is underlain by mass wastage debris from that epoch;
- C. Any area potentially unstable as a result of rapid stream incision, stream bank erosion or undercutting by wave action;
- D. An area that shows evidence of or is at risk from snow avalanches; or
- E. An area located on an alluvial fan, presently or potentially subject to inundation by debris flows or deposition of stream-transported sediments.

While the slopes on the site exceed 15 percent, the slopes do not include any of the characteristics presented in Item A above. Therefore, the slopes do not meet the definition of a landslide hazard.

3.3.4 Seismic Hazard Areas

According to the STMC, seismic hazard areas are those areas in the City subject to severe risk of earthquake damage as a result of soil liquefaction in areas underlain by cohesionless soils of low density and usually in association with a shallow groundwater table or other seismically induced settlement. According to the City of SeaTac Seismic Hazards Map, the site is not situated within any seismic hazard areas.

According to King County Code 21A.06.1045, Seismic Hazard Area, a seismic hazard area is an area subject to severe risk of earthquake damage from seismically induced settlement or lateral spreading as a result of soil liquefaction in an area underlain by cohesionless soils of low density and usually in association with a shallow groundwater table.

According to the Department of Natural Resources, Liquefaction Susceptibility Map of King County, Washington, the site is mapped as being within an area of very low potential for liquefaction. The dense to very dense glacial till soils encountered below the water table in our borings are considered by ZGA to have a very low potential to liquefaction. Therefore, the site does not meet the definition of a seismic hazard area.

3.3.5 Wellhead Protection Areas

Wellhead Protection Areas: According to the City of SeaTac Wellhead Protection Areas map, the project site is situated within overlapping wellhead protection areas for the Tyee and Angle Lake Wells. The site is mapped as falling within a 5-year wellhead protection buffer for one or both of the wells. Based on Section 15.700.360 of the STMC, it appears that the proposed development does not meet the criteria for prohibited uses within a wellhead protection area.

3.4 Stormwater Infiltration Feasibility

With respect to stormwater infiltration, the SeaTac Municipal Code indicates that the City has adopted the 2016 King County Surface Water Design Manual (KCSWDM). Based on our review of the 2016 KCSWDM, the applicant must demonstrate, through the opinion of a geotechnical professional, that sufficient permeable soil exists to allow construction of a properly functioning infiltration facility. Our explorations encountered very dense glacial till at a depth of about 1 to 4½ feet below existing site grades that extended to depths of about 9½ to 28 feet below grade. Beneath the glacial till, granular sand and gravel with a lower fines content was encountered. However, this material was saturated. The sand and gravel continued to the bottom of the borings at 26 to 31 feet below existing grades.

In borings B-5 and B-6, located to on the western portion of the site, we encountered very dense glacial till at about 1 foot below existing site grades. For purposes of stormwater infiltration, glacial till (or hardpan) is considered to be hydraulically restrictive or essentially impermeable for purposes of stormwater infiltration. Because of the glacial till present at the site, perched groundwater likely develops across the site during the wet seasons. As such, it is our opinion that sufficient permeable soils do not exist at the site and therefore stormwater infiltration is not feasible, in our opinion. Groundwater levels will be continued to be measured throughout the wet season (Oct. 30 through Apr. 1) in monitoring wells that were installed in borings B-5 and B-6 to determine the seasonal high groundwater level in accordance with the King County Surface Water Design Manual. Prior to site clearing, the wells should be abandoned in accordance with WSDOE requirements.

3.5 Site Preparation

The project site is located in a relatively densely wooded and brushy area. As such, we expect site preparation to begin with clearing existing trees and brush and subsequent stripping of forest duff and organic-rich topsoil.

3.5.1 Erosion Control Measures

Stripped surfaces and soil stockpiles are typically a source of runoff sediments. We recommend that silt fences, berms, and/or swales be installed around the downslope side of stripped areas and stockpiles in order to capture runoff water and sediment. If earthwork occurs during wet weather, we recommend that all stripped surfaces be covered with straw to reduce runoff erosion, whereas soil stockpiles should be protected with anchored plastic sheeting. Because of the sloping nature of the site, runoff and sedimentation control will be necessary.

3.5.2 Temporary Drainage

Stripping, excavation, grading, and subgrade preparation should be performed in a manner and sequence that will provide drainage, control of erosion, and protection of prepared subgrades. The glacial till soils near the surface and at anticipated excavation depths have a relatively high fines (silt and clay) content and are therefore susceptible to disturbance and erosion when wet. Portions of the site remaining near surrounding grades should be sloped to prevent surface water from ponding and/or flowing into the excavation. Drainage measures, such as ditches, sumps, and pumps, could be employed at the base of the excavation for the below-grade portion of the building to minimize disturbance of the building subgrade. Alternatively, a layer of crushed rock or a lean concrete “rat slab” could be used to limit subgrade disturbance at the base of the excavation.

3.5.3 Clearing and Stripping

We anticipate that clearing and stripping of organics will range from about 8 to 12 inches in thickness. Thicker deposits of topsoil and organics should be expected where tree roots are encountered.

3.5.2 Subgrade Preparation

Once clearing and stripping are complete, and due to the fact that approximately 4½ feet of loose, undocumented fill soils were encountered in borings B-2 and B-3, we recommend that test pit excavations be completed across the site in order to determine the horizontal and vertical extent of loose, undocumented fill soils across the site. We recommend that all loose, undocumented fill soils be over-excavated and replaced with compacted structural fill. We anticipate that some portion of the fill soils will be suitable for reuse as structural fill.

Once the extent of fill soils has been determined, we recommend that all areas that do not require over-excavation and are at design subgrade elevation or areas that will receive new structural fill be compacted to a firm and unyielding condition. Where structural fill will be placed on slopes steeper than 5H:1V, we recommend that the slopes be terraced in order to place the fill on relatively flat surfaces for stability and compaction purposes.

At the time the subsurface evaluation was completed, the in-situ moisture content of soils within the upper 5 feet of existing site grade appears to be at or above the optimum moisture content for compaction. If earthwork or construction activities take place during extended periods of wet weather, or if the *in-situ* moisture conditions are elevated above the optimum moisture content, the soils at the proposed excavation depths could become unstable or not be compactable. A layer of crushed rock or crushed concrete could be placed over the exposed subgrade to limit disturbance. The specific thickness and material type should be determined at the time of construction based on weather, anticipated construction traffic, exposure duration, and actual soil and groundwater conditions encountered. In the event the exposed subgrade becomes unstable, yielding, or unable to be compacted due to high moisture conditions, we recommend that the materials be removed to a sufficient depth in order to develop stable subgrade soils that can be compacted to the minimum recommended levels. The severity of construction problems will be dependent, in part, on the precautions that are taken by the contractor to protect the subgrade soils.

3.5.3 Freezing Conditions

If earthwork takes place during freezing conditions, all exposed subgrades should be allowed to thaw and then be compacted prior to placing subsequent lifts of structural fill or pouring foundations. Alternatively, the frozen material could be stripped from the subgrade to expose unfrozen soil prior to placing subsequent lifts of fill or foundation components. The frozen soil should not be reused as structural fill until allowed to thaw and adjusted to the proper moisture content, which may not be possible during winter months.

3.6 Structural Fill Materials and Placement

Structural fill includes any material placed below foundations, floor slabs, and pavement sections, within utility trenches, and behind retaining walls. Prior to the placement of structural fill, all surfaces to receive fill should be prepared as previously recommended in the Site Preparation section of this report.

3.6.1 Laboratory Testing

Representative samples of on-site and imported soils to be used as structural fill should be submitted for laboratory testing at least four days in advance of its intended use in order to complete the necessary Proctor tests.

3.6.2 Re-Use of Site Soils as Structural Fill

The non-organic soils encountered on the site are suitable for reuse as general structural fill from a compositional standpoint provided it is placed and compacted in accordance with the recommendations presented in this report. If the in-situ moisture conditions at the time of earthwork prevent adequate compaction of the soils, the soil will need to be aerated and dried to achieve the minimum recommended compaction levels for structural fill. The relatively high fines content (silt and clay) of the glacial till soil will make it difficult to compact if exposed to additional moisture during wet weather. Therefore, we recommend that soils intended for re-use be covered with plastic sheeting during wet weather conditions to prevent an increase in its moisture content.

We recommend that site soils used as structural fill have less than 4 percent organics by weight, have no woody debris greater than ½-inch in diameter, and contain no other deleterious materials. We recommend that all pieces of organic material greater than ½-inch in diameter be picked out of the fill before it is compacted. Deleterious debris includes waste building materials, organics, trash, and asphalt and, if encountered, it should be removed from the soil prior to its reuse as structural fill.

3.6.3 Imported Structural Fill

If additional material is required for grading and fills, the appropriate type of imported structural fill will depend on the weather conditions. During extended periods of dry weather, we recommend imported fill meet the requirements of Common Borrow as specified in Section 9-03.14(3), Option 1 or 2, of the 2022 Washington State Department of Transportation, *Standard Specifications for Road, Bridge, and Municipal Construction* (WSDOT Standard Specifications). The on-site soils would generally be classified as Common Borrow. During wet weather, higher-quality (lower fines content) structural fill might be required, as Common Borrow may contain sufficient fines to be moisture sensitive. During wet weather we recommend that imported structural fill meet the requirements of Gravel Borrow as specified in Section 9-03.14(1) of the WSDOT Standard Specifications.

3.6.4 Moisture Content

The suitability of soil for use as structural fill will depend on the prevailing weather at the time of construction, the moisture content of the soil, and the fines content (that portion passing the U.S. No. 200 sieve) of the soil. As the amount of fines increases, the soil becomes increasingly sensitive to small changes in moisture content. Soils containing more than about 5 percent fines (such as most of the on-site soils) cannot be consistently compacted to the appropriate levels when the moisture content is more than approximately 2 percent above or below the optimum moisture content (per ASTM D1557). Optimum moisture content is that moisture content which results in the greatest compacted dry density with a specified compactive effort.

3.6.5 Fill Placement

We recommend that structural fill be placed in horizontal lifts not exceeding 8 inches in loose thickness and each lift of fill be compacted using compaction equipment suitable for the soil type and lift thickness to the minimum levels recommended below based on the maximum laboratory dry density as determined by the ASTM D1557 Modified Proctor Compaction Test.

3.6.6 Compaction

Our recommendations for soil compaction are summarized in the following table. We recommend that a geotechnical engineer be present during grading so that an adequate number of density tests may be conducted as structural fill placement occurs.

RECOMMENDED SOIL COMPACTION LEVELS	
Location	Minimum Percent Compaction*
All fill below building floor slabs and foundations	95
Upper 2 feet of fill below exterior slabs and pavements	95
Pavement and exterior slab fill below two feet	92
Upper two feet of utility trench backfill	95
Utility trenches below two feet	92
Landscape areas	90
* ASTM D1557 Modified Proctor Maximum Dry Density	

3.7 Utility Trenching and Backfilling

We recommend that utility trenching and stormwater vault construction conform to all applicable federal, state, and local regulations, such as OSHA and WISHA, for open excavations. Trench excavation safety guidelines are presented in WAC Chapter 296-155 and WISHA RCW Chapter 49.17.

For utilities located below the building slab, such as stormwater detention tanks, we recommend the base of the excavation for the utility be located such that a line extended upward at a 45-degree angle from the edge of the excavation does not travel below nearby building footings.

3.7.1 Utility Subgrade Preparation

We recommend that all utility subgrades be firm and unyielding and free of soils that are loose, disturbed, or pumping. Soils that pump or yield should be removed and replaced. All structural fill used to replace over-excavated soils should be compacted as recommended in the Structural Fill section of this report.

3.7.2 Bedding and Initial Backfill

We recommend that a minimum of 4 inches of bedding material be placed above and below all utilities or in general accordance with the utility manufacturer's recommendations and local ordinances. We recommend that pipe bedding consist of Gravel Backfill for Pipe Zone Bedding as specified in Section 9-03.12(3) of the WSDOT Standard Specifications. All trenches should be wide enough to allow for compaction around the haunches of the pipe, or material such as pea gravel should be used below the spring line of the pipes to eliminate the need for mechanical compaction in this portion of the trenches. If water is encountered in the excavations, it should be removed prior to fill placement.

3.7.3 Trench Backfill

Materials, placement and compaction of utility trench backfill should be in accordance with the recommendations presented in the Structural Fill section of this report. We recommend that the initial lift thickness should not exceed 1 foot unless recommended by the manufacturer to protect utilities from damage by compacting equipment. Light, hand operated compaction equipment may be utilized directly above utilities if damage resulting from heavier compaction equipment is of concern.

3.8 Temporary Slopes

Temporary excavation slope stability is a function of many factors, including:

- The presence and abundance of groundwater;
- The type and density of the various soil strata;
- The depth of cut;
- Surcharge loadings adjacent to the excavation; and
- The length of time the excavation remains open.

It is exceedingly difficult under the variable circumstances to pre-establish a safe and “maintenance-free” temporary cut slope angle. Therefore, it should be the responsibility of the contractor to maintain safe temporary slope configurations since the contractor is continuously at the job site, able to observe the nature and condition of the cut slopes, and able to monitor the subsurface materials and groundwater conditions encountered. Unsupported vertical slopes or cuts deeper than 4 feet are not recommended if worker access is necessary. The cuts should be adequately sloped, shored, or supported to prevent injury to personnel from local sloughing and spalling. The excavation should conform to applicable Federal, State, and Local regulations.

According to Chapter 296-155 of the Washington Administrative Code (WAC), the contractor should make a determination of excavation side slopes based on classification of soils encountered at the time of excavation. Temporary cuts may need to be constructed at flatter angles based upon the soil moisture and groundwater conditions at the time of construction. Adjustments to the slope angles should be determined by the contractor at that time.

For preliminary planning purposes, a maximum temporary slope inclination of 1½H:1V (Horizontal:Vertical) in loose to medium dense soils (Type C soil), 1H:1V in dense soils (Type B soil), and 3/4H:1V in very dense soils (Type A soil) appears suitable, provided the soils are in a dewatered, unsaturated condition, and surface runoff is not allowed to flow on to the slopes. Flatter temporary slopes may be necessary depending on the site and subsurface conditions at the time of construction. In all cases, cut slopes and shoring should conform to applicable Federal, State and/or local safety guidelines.

3.9 Construction Dewatering

Groundwater was encountered in our borings at depths ranging from about 13 to 29 feet below the ground surface. The bottom of footing elevation at the east end of the Level 1 excavation for the building is approximately 0 to 1 foot of the groundwater levels encountered in borings B-1 and B-2. Fluctuations in seasonal groundwater levels could put the footing excavations below the groundwater table. As such, we recommend that a contingency be established in the event that temporary construction dewatering becomes necessary.

If the transition excavation between Level 1 and Level 3 is supported by soldier piles, the soldier pile drilled shafts will encounter groundwater. If not adequately dewatered, the excavation will develop unstable soils

that would likely lead to sidewall caving and development of quick conditions in the soldier pile subgrade soils.

If groundwater is encountered in the east end of the Level 1 excavation, foundation excavations should be dewatered by a series of wellpoints and/or dewatering wells. Dewatering is recommended to an elevation of at least 2 feet below the base of the deepest footing or utility excavation in the area. Dewatering should be operated continuously while the excavation is open. The contractor should be responsible for selection, design, and operation of temporary dewatering. We recommend that a pre-construction pump test be completed to provide data to assist the contractor-designed temporary dewatering systems. We recommend pump testing be completed prior to releasing the project for bidding. We also recommend that the contractor's dewatering plan be submitted to the design team for review prior to the start of construction.

If temporary dewatering is necessary, a Discharge Authorization Letter from King County Industrial Waste may be required prior to discharging dewatering effluent from the site. The SSPTD permit may require compliance with a separate temporary dewatering plan, water quality treatment, flow control requirements, and require compliance monitoring.

We recommend that designing temporary and permanent dewatering systems be completed by a dewatering specialist. Local dewatering consultants include:

1. Scott Bender – Bender Consulting, LLC, 360-631-5600, scott@benderllc.com
2. Richard Martin – Richard Martin Groundwater LLC, 206-979-1530, Richard.martin.gw@gmail.com
3. Robert Middour – Middour Consulting, 425-864-2719, rmiddour@middour consulting.com

3.10 Temporary Shoring

Based on the soil conditions observed at the exploration locations soldier pile or soil nail shoring may be considered to temporarily support excavations during construction where open cuts are not possible. Recommendations regarding drainage of permanent walls cast against temporary soil nail or soldier pile shoring are included in Section 3.11 of this report.

3.10.1 Soldier Piles

Soldier pile shoring typically consists of vertical elements (steel beams commonly referred to as soldier piles) installed in pre-drilled holes at a spacing of up to 8 feet on center. After the steel beams are installed, the holes are backfilled with lean mix or structural concrete. As the excavation proceeds downward, timber lagging is installed between the beam flanges to retain soil. At the end of each day, free-draining backfill is placed between the lagging and the soil.

Soldier pile shoring can be designed as either cantilever or tieback anchored. In competent soils, cantilever shoring can be designed to a maximum height of about 15 feet. When lateral deformation predicted with cantilever shoring is unacceptable, or where shoring heights are greater than that which can be achieved

with a cantilever system, an anchored soldier pile shoring system can be used. The design of soldier pile shoring is generally accomplished using empirical relationships and apparent earth pressure distributions. These earth pressure distributions or envelopes do not represent the precise distribution of earth pressures but rather constitute hypothetical pressures for shoring design which would not likely be exceeded in the excavation. Additionally, pressures must be selected to limit deflections, both vertical and horizontal, of nearby settlement sensitive buildings, structures, roadways, and utilities. The design of soldier pile and lagging shoring should include lateral pressures exerted by the retained soil, surcharge loads from adjacent buildings, and other surcharges such as traffic, construction materials, crane pad loads, and temporary soil stockpiles adjacent to the excavation.

Soldier pile installation may involve casing the holes, drilling with a mud slurry, or using continuous flight auger to maintain a stable excavation in the presence of groundwater seepage. Unless the site is dewatered to a depth below the bottom of the soldier piles, construction of the soldier piles below the groundwater table should be expected. The shoring contractor should be required and prepared to prevent sidewall caving and loss of ground in all soldier pile drill holes and heaving of the bearing soils at the base of the shaft. If more than one foot of water is present in the bottom of the hole, we recommend that the concrete be tremied from the bottom of the hole to displace the water. Soldier pile borings along the east end of Levels 1 and 2, as well as along a portion of the north side of Levels 1 and 2, should be expected to encounter groundwater within the embedded portion of the piles below Level 1.

Design of soldier pile shoring should be based on either “active” or “at-rest” lateral earth pressures, depending on the degree of deformation that the shoring wall can tolerate. Active pressures can be used for design if the lateral wall movement on the order of 0.001 to 0.002 times wall height is acceptable. The lateral movement is typically accompanied by vertical settlement of about 0.1 percent to 0.2 percent of the wall height with the maximum occurring immediately behind the wall face and trending to zero at a distance of roughly one to two times the wall height. If settlement sensitive utilities or buildings are within the zone of influence, we recommend designing the shoring utilizing at-rest earth pressures. An assumed “at-rest” earth pressure condition theoretically assumes no movement of the soil behind the shoring; however, some movement and associated settlement should realistically be anticipated due to construction practices and/or the fact that it is not possible to construct a perfectly stiff shoring system.

Design recommendations for cantilever and single-row, tieback supported soldier pile shoring are presented graphically on the Figure 2, Soldier Pile Design Parameters. If multi-row tieback recommendations are required, please contact ZGA for the design parameters. Active and at-rest earth pressures can be assumed to act over the pile spacing above the bottom of the excavation and over one concreted pile diameter below the base of the excavation. Passive earth pressures acting on the embedded portion of the soldier piles resist horizontal loads imposed by the retained soils on the shoring system. Passive earth pressures may be applied over two diameters of the concreted soldier pile section. For either system, it must be recognized that, in order to achieve the passive earth resistance some lateral deformation of the shoring system is required.

For the case of a slope above the shoring, a uniform surcharge of $17.5H_s$ or $26H_s$, where H_s equals the height of the slope between the top of the shoring and the ground surface at a distance of $0.8H$ feet behind the wall, where H is the height of the shoring wall. For traffic surcharges adjacent to the shoring, we recommend adding a uniform surcharge load equivalent to 2 additional feet of soil (using a unit weight of 125 pcf). For other loads adjacent to the shoring (e.g., heavy construction loads, crane loads, and building foundations), the appropriate surcharge pressures should be added. Figure 3 presents lateral pressures from surcharge loads. Seismic surcharge pressures are not generally applied to temporary walls, but instead are included in the design of the permanent concrete walls constructed in front of the shoring.

Vertical capacity of the soldier piles will be provided by a combination of end bearing and side friction below the base of the excavation. The piles can be designed for an allowable end bearing resistance of 20 tsf with an allowable side friction of 2 tsf for that portion of the pile embedded into the dense to very dense native soils. A factor of safety of 2 has been applied to the allowable end bearing and side friction values.

Passive earth pressures acting on the embedded portion of the soldier piles resist horizontal loads imposed by the retained soils on the shoring system. Passive earth pressures may be applied over two diameters of the concreted soldier pile section or the pile spacing, whichever is less. Figure 2 presents the recommended allowable passive pressures for design of the soldier piles and include a factor of safety of 1.5.

3.10.2 Soldier Pile Tieback Anchors

Based on the plans provided to us, it appears that if tieback anchors are used along the north side of the excavation, the anchors would extend off site and into the S. 204th Street right-of-way. If so, it will be necessary to obtain a temporary easement from the City of SeaTac.

For tieback anchors, the anchor portion of the tieback should be located sufficiently far behind the excavation shoring to stabilize the excavation face. The limits of the “no load zone” include the area behind the soldier pile equal to a lateral distance from the base of the excavation equal to the exposed wall height (H in feet) divided by four, or five feet, whichever is greater, and a line sloping up and back at 62 degrees from horizontal.

The selection of the tieback materials and installation methods should be the responsibility of the contractor. The actual adhesion values will depend on the materials and installation method and should be confirmed by testing. For non-pressure grouted anchors, we recommend using an allowable design concrete/soil adhesion value of 3.1 kips per foot (klf). For pressure grouted anchors, this value can typically be increased by two to three times. We recommend all tieback anchors be proof tested to at least 130 percent of the design capacity prior to locking off at the specified post tensioned design load. Prior to installation of production anchors, two verification tests to 200 percent of the design pull out capacity are recommended for each soil type in order to confirm the design capacity.

A minimum anchor spacing of four feet center to center is recommended for tieback anchors. The anchor holes should be drilled at an angle of 15 to 30 degrees down from horizontal. A minimum anchor bond of 10 feet is recommended. The location and presence of existing features such as utilities and foundation should be checked during the design as these may affect the location and length of tieback anchors.

When drilling tieback anchor holes, casing may be required to prevent caving and loss of ground. The anchor grout should be pumped into the anchor zone by tremie methods in order to remove water from the hole and to provide a continuous grouted anchor.

3.10.3 Lagging

We recommend timber lagging be installed between the soldier piles. The excavation height prior to lagging installation should not exceed 5 feet to maintain stability of the cut face. Shorter cuts may be necessary depending on the stability of the exposed soil or the proximity of settlement sensitive structures behind the wall. Prompt and careful installation of lagging would reduce potential loss of ground. The requirements for lagging should be made the responsibility of the shoring subcontractor to prevent soil failure, sloughing, and loss of ground. Proper installation of lagging is critical to provide safe working conditions. Due to the proximity of settlement sensitive buildings, utilities, and streets, void space behind the lagging should be minimized. We recommend that the voids behind the lagging be backfilled daily with free-draining granular material, porous slurried sand or permeable CDF. Drainage behind the wall must be maintained during and after construction and the backfill should not allow potential hydrostatic pressure to build-up behind the wall.

We recommend that lagging be designed in general accordance with Section 6-16.3(6)B of the 2022 WSDOT Standard Specifications. For purposes of lagging design, the upper 5 feet of site soils should be classified as Type 2 soil, while below 5 feet, the soils should be classified as Type 1 soil. Alternatively, lagging could be designed in accordance with Section 5.4.2, Design of Lagging for Temporary Support, presented in Federal Highway Administration Geotechnical Engineering Circular No. 4 (FHWA Publication FHWA-IF-99-015, 1999). For purposes of design, we recommend the upper 5 feet of soils be rated as difficult and soils below 5 feet as competent.

3.10.4 Temporary Shoring Monitoring

Any time an excavation is made below the level of existing streets, buildings, utilities, or other structures, there is risk of damage even if a well-designed shoring system has been planned. Therefore, we recommend that a monitoring program be conducted on adjacent facilities and structures. The monitoring program should include measurements of the horizontal and vertical movements of the adjacent structures and the shoring system itself. At least two reference lines should be established adjacent to the excavation at horizontal distances back from the excavation space of about $1/3H$ and H , where H is the final excavation height. Monitoring of the shoring system should include measurements of horizontal and vertical movements at the top of every other soldier pile. We also recommend that intermediate monitoring points be established on every other pile that is greater than 25 feet in exposed height. If local wet areas are noted within the excavation, additional monitoring points may be recommended by ZGA.

The measuring system used for shoring monitoring should have an accuracy of at least 0.01 foot. All reference points should be installed and readings taken prior to commencing the excavation. All reference points should be surveyed by a licensed surveyor during construction at least once a week until the basement walls are completely braced by the structure. All readings should be submitted to the shoring designer and ZGA as soon as possible.

In order to establish the condition of existing adjacent streets and properties prior to construction, we recommend that the client and/or contractor make a complete inspection and evaluation of pavements, utilities, and other facilities near the project site. This inspection should be directed towards detecting any existing signs of damage, particularly those caused by settlement or lateral movement. We recommend the observations be documented by pictures, notes, survey drawings, or other means of verification. We also recommend the contractor establish for their own records the existing conditions prior to construction.

3.10.5 Soil Nail Wall Design Recommendations

The basic concept of soil nailing is to reinforce and strengthen the existing ground by installing closely spaced steel bars commonly referred to as “nails” into an excavation sidewall as construction proceeds from the top, downward. This produces a reinforced zone that supports the un-reinforced ground behind it. The nails are considered passive elements. As tension is applied, they resist the deformation of the soil surrounding each nail. The nail reinforcement improves stability in two ways. First, soil nailing reduces the driving force along the potential failure surfaces. Second, in frictional soil, nailing increases the normal force and hence the soil shear resistance along potential failure surfaces.

3.10.6 Soil Nail Wall Design Parameters

Based on the subsurface conditions encountered during our site investigation, the portion of the site where soil nail shoring would likely be required primarily consists of glacial till deposits composed of very dense silty sand with gravel to sand with silt and gravel. However, with an assumed bottom of footing elevation of approximately 315 feet, it appears that some granular soils beneath the glacial till could be exposed in the northeast corner of Level 1. The following parameters are recommended for design of soil nail walls:

Existing Fill Soils

Friction Angle: 30 degrees

Cohesion: 0 psf

Moist Unit Weight: 120 pcf

Ultimate Pullout Strength (minimum 6-inch diameter soil nail): Not Applicable

Allowable Pullout Strength (minimum 6-inch diameter soil nail): Not Applicable.

Glacial Till

Friction Angle: 40 degrees

Cohesion: 250 psf

Moist Unit Weight: 135 pcf

Ultimate Pullout Strength (minimum 6-inch diameter soil nail): 6 kip/ft.

Allowable Pullout Strength (minimum 6-inch diameter soil nail): 3 kip/ft.

The above-recommended values for friction angle and cohesion are based on typical values for glacial till deposits published in the Washington State Department of Transportation's Geotechnical Design Manual. The actual pullout strength values will depend on the materials and installation methods and should be confirmed by testing. Larger diameter drill holes and/or secondary grouting may be required to achieve the recommended pull out capacity. Installation methods should be the responsibility of the contractor. The location and presence of existing features should be checked during the design as these may affect the location and lengths of the soil nails.

3.10.7 Vertical Elements

Vertical elements may be used to provide cantilever support where utilities or adjacent structures prevent installation of soil nails in the upper portion of the shoring wall. They are also used to improve face stability of soils that do not have adequate stand-up time to install the nails, wire mesh, reinforcing, and shotcrete, such as the loose soils encountered in the upper 4½ feet in Borings B-2 and B-3. To evaluate the stand-up time of a soil of concern, test pits should be excavated through the material and left open for 1 to 2 days to view the stability in order to provide adequate protection for workers and the public. In excavations in the dense to very dense glacial till the stand-up time of the soil may differ greatly compared excavations into the possible, loose fill areas. If excavations in the possible fill soils prove to have poor stand up time it may be beneficial to lay back this section of the excavation to an appropriate slope, if possible, as described in Section 3.8, Temporary Slopes, of this report. The allowable passive resistance on vertical elements should be determined based on the configuration of the wall system.

We recommend that soil nail shoring be designed in general accordance with local standard of practice and soil surcharge pressures from slopes, construction loads, and traffic be included in the analysis and design, where appropriate.

3.10.8 Soil Nail Shoring Installation

We recommend that soil nail grout be pumped into the soil nail holes by tremie methods in order to force grout up from the bottom of the hole and to provide a continuously grouted soil nail.

We recommend that a minimum of two sacrificial, 200 percent verification tests be performed in each soil type to be nailed in order to evaluate the ultimate soil friction capacity and the load deformation performance of the soil nail. Verification testing should be accomplished as soon as each soil type is encountered and prior to installation of production nails. The location of the verification tests should be selected by the contractor and approved by the engineer of record. The drilling method, hole diameter, and depth of soil nail should be identical to the production soil nails. Additionally, 5 percent of production soil nails should be proof tested to 150 percent of design load to confirm the design capacity and appropriate construction methods.

3.11 Permanent Retaining Walls

3.11.1 Foundation subgrade preparation

Based on the approximate 4½ feet of loose, undocumented fill encountered in borings B-2 and B-3, it is possible that portions of the retaining wall may be situated in areas of the loose fill that are unsuitable for foundation support. If loose fill soils are present along the wall alignment, we recommend that they be over-excavated and the wall extended down to the dense native soils. Alternatively compacted structural fill could be used, but in order to develop a stiff soil modulus, we recommend that the fill soil be blended with dry cement. A soil-cement mix design should be completed if this option is considered.

The retaining wall along the south property line is also situated along the top of several steep slopes that are on the order of 10 feet tall. It appears that the wall above these steep slopes will vary in height from approximately 7 to 18 feet. Besides the possible presence of loose fill along the wall alignment, the location of the wall (and its associated backfill) above the steep slopes will subject the slopes to large surcharges and may create global slope stability issues. Further recommended studies including the evaluation of the subgrade soils and slope stability analysis are discussed in Section 3.16 of this report.

3.11.2 Lateral Earth Pressures

The lateral soil pressures acting on backfilled retaining walls will depend on the nature and density of the soil behind the wall, and the ability of the wall to yield in response to the earth loads. Yielding walls (i.e. walls that are free to translate or rotate) that are able to displace laterally at least $0.001H$ to $0.002H$, where H is the height of the wall, may be designed for active earth pressures. Non-yielding walls (i.e. walls that are not free to translate or rotate) should be designed for at-rest earth pressures. Non-yielding walls include walls that are braced to another wall or structure, and wall corners.

For permanent walls constructed against temporary shoring, we recommend they be designed using the same active and at-rest earth pressures used in the design of the soldier pile shoring system. For backfilled walls, assuming they are backfilled and drained as described in the following paragraphs, we recommend that yielding walls supporting horizontal backfill be designed using an equivalent fluid density of 35 pcf (active earth pressure). Non-yielding walls should be designed using an equivalent fluid density of 55 pcf (at-rest earth pressure). For permanent walls with level backfill conditions, we recommend using a uniformly distributed seismic pressure of $12H$ psf, where H is the height of the wall.

Surcharge pressures due to sloping backfill, adjacent footings, vehicles, construction equipment, etc. must be added to the lateral earth pressure values. For traffic loads, we recommend using an equivalent two-foot soil surcharge using a soil unit weight of 125 pcf. Other surcharges from construction equipment, construction materials, and neighboring buildings should be assessed using the surcharge diagrams presented on Figure 3 of this report. Where backslopes are present behind a wall, we recommend applying a slope surcharge of $17.5H_s$ for the active earth condition and $27.5H_s$ for the at-rest condition, where H_s is the height of the backslope measured between the top of the shoring and the ground surface at 0.8 times the wall height behind the retaining wall.

The above equivalent fluid pressures are based on the assumption of no buildup of hydrostatic pressure behind the wall. If groundwater is allowed to saturate the backfill soils, hydrostatic pressures will act against a retaining wall. We recommend that the seasonal high groundwater level be assumed to be 2 feet above the levels measured by ZGA at the time of drilling. Permanent walls should be provided with drainage as described subsequently in this report.

3.11.3 Drainage

Except for possibly along the east end of Level 1, groundwater levels encountered within our borings were below anticipated depths for the below-grade portions of the proposed structure, surface water and water-bearing coarse-grained zones within the glacial till create the potential for hydrostatic buildup behind the below-grade portions of the structure. Adequate drainage measures must be installed to collect and direct subsurface water away from subgrade walls. All backfilled walls should include a drainage aggregate zone extending a minimum of two feet from the back of wall for the full height of the wall and wide enough at the base of the wall to allow seepage to flow to the footing drain. We recommend the drainage aggregate consist of material meeting the requirements of WSDOT 9-03.12(2), Gravel Backfill for Walls or approved equivalent. A minimum 4-inch diameter, perforated PVC drainpipe should be provided at the base of backfilled walls to collect and direct subsurface water to an appropriate discharge point. We recommend placing a non-woven geotextile, such as Mirafi 140N, or equivalent, around the free draining backfill material such as pea gravel or WSDOT 9-03.13, Gravel Backfill for Drains. Wall drainage systems should be independent of other drainage systems such as roof drains.

For permanent building walls cast directly against temporary soldier pile shoring walls, we recommend a minimum 4-foot wide prefabricated composite drainage matting be placed for the full height of the shoring wall. For soldier pile walls with timber lagging, we recommend the drainage matting be attached to the face of the lagging prior to construction of the permanent wall. For soil nail walls, the drainage matting can be reduced to 2 feet wide. It should be attached to the soil cut prior to placement of the temporary shotcrete facing. Near the bottom of the wall, centered in each drainage mat, a prefabricated connector should be connected to the drainage matting. The connector should be fitted with a 3-inch minimum diameter weep hole pipe that will extend through the face of the permanent foundation wall. The weep hole pipe should be connected to a tightline system leading to a suitable discharge.

The prefabricated drainage mat should not be considered a waterproofing membrane. The primary purpose of the drainage mat is to provide a means of draining groundwater seepage and preventing the build-up of hydrostatic pressure behind a wall. If the potential for groundwater seepage and/or the development of efflorescence on the interior walls against the cut side of the site are unacceptable, a waterproofing membrane should be installed between the drainage mat covered shoring wall and the concrete basement wall. We recommend that a waterproofing material be used to cover the entire area of shotcrete facing on soil nail walls and the entire face of a soldier pile wall that is covered with drainage composite. We recommend that a consultant specializing in waterproofing be retained to design the waterproofing based upon the method of basement construction used for this project.

3.12 Foundations

In our opinion, conventional spread footings are suitable for support of the proposed structure. Where the building is situated in a cut, it appears that the foundations will be supported on dense to very dense glacial till. However, loose fill soils were encountered in borings B-2 and B-3 that extended down to approximately elevations 333½ and 310 feet, respectively. The loose soils are unsuitable for foundation support and we recommend that they be over-excavated and replaced with structural fill that is compacted to a minimum of 95 percent of the modified Proctor maximum dry density.

Additional structural fill will be required to achieve foundation subgrade elevations in the southwestern portion of the building. Assuming that the 4½ feet of loose fill encountered in boring B-3 extends to the southwest corner of the building, the foundations will be supported on approximately 15 feet of structural fill. Even with the fill being compacted to a minimum of 95 percent of the modified Proctor maximum dry density, we estimate that the southwestern corner of the building could settle between 1 to 2 inches. Most of this settlement will also be realized as differential settlement between the southwest corner of the building and the line where other building foundations are supported on the native, dense to very dense glacial till soils. If this settlement is not tolerable, it will be necessary to stiffen these fill soils to develop a greater soil modulus. Mixing the soil with dry cement is one option. However, a soil-cement mix design will need to be completed in order to determine the amount of cement that will provide the necessary strength. ZGA is available to complete a soil-cement mix design for the project at your request.

3.12.1 Allowable Bearing Pressure

In order to limit total and differential settlements to less than 1 inch and ¾ inch, respectively, the anticipated bottom of footing elevations, and the probability that a significant portion of the footings will be supported on structural fill, we recommend that continuous and column footings be designed for the structural fill condition. We recommend using an allowable bearing capacity of 3,000 psf. Where footings bear on dense to very dense, undisturbed, native glacial till, they could be designed using a maximum allowable bearing capacity of 4,000 psf. However, we recommend that this be limited to areas where the footings will be constructed on dense to very dense soils as depicted on the boring logs. A one-third increase of the bearing pressure may be used for short-term dynamic loads such as wind and seismic forces. The above-recommended allowable bearing pressure includes a factor of safety of 3.

3.12.2 Shallow Foundation Depth and Width

For frost protection, the bottom of all exterior footings should bear at least 18 inches below the lowest adjacent outside grade, whereas the bottoms of interior footings should bear at least 12 inches below the surrounding slab surface level. We recommend that all continuous wall and isolated column footings be at least 12 and 24 inches wide, respectively.

3.12.3 Lateral Resistance

We recommend using allowable base friction and passive earth values of 0.35 and 350 pcf equivalent fluid pressure, respectively, for footings in dense to very dense glacial till soils. We recommend using allowable base friction and passive earth values of 0.35 and 250 pcf equivalent fluid pressure, respectively, for

footings in structural fill soils that are compacted to a minimum of 95 percent of the modified Proctor maximum dry density. We recommend that passive resistance be neglected in the upper 18 inches of embedment.

3.12.4 Estimated Settlement

Assuming the foundation subgrade soils and structural fill compaction are completed in accordance with recommendations presented herein, we estimate that total and differential static settlements will be less than 1 inch and $\frac{3}{4}$ inch, respectively. However, where more than about 5 feet of structural fill is placed beneath foundations, we recommend that cement be added to the fill material in order to limit total and differential settlements will be less than 1 inch and $\frac{3}{4}$ inch, respectively.

3.13 Concrete Slab-On-Grade Floors

3.13.1 Subgrade Preparation

Loose fill soils were encountered in borings B-1 and B-2 that extended down to approximately elevations 333½ and 310 feet, respectively. The loose soils are unsuitable for floor slab support and we recommend that they be over-excavated and replaced with structural fill that is compacted to a minimum of 95 percent of the modified Proctor maximum dry density. Additional structural fill will be required to achieve floor slab subgrade elevations in the western portion of the building.

After excavation to subgrade elevation, the base of the excavation is frequently disturbed or altered due to utility excavations, construction traffic, or rainfall. As a result, the slab-on-grade subgrade may become unsuitable for floor slab support. At the time of slab base placement, the subgrade should be evaluated by ZGA to verify that a firm and non-yielding surface is established and suitable for support of the floor slab.

3.13.2 Slab Base

To provide a uniform slab bearing surface, capillary break, and even working surface, we recommend the on-grade slabs be underlain by a 6-inch thick layer of compacted crushed rock meeting the requirements of Crushed Surfacing Top Course as specified in Section 9-03.9(3) of the WSDOT Standard Specifications with the modification that a maximum of 6 percent of the material passes the U.S. No 200 sieve. Alternatively, we recommend using Type 22, $\frac{3}{4}$ -inch Crushed Gravel, per City of Seattle Standard Specification 9-03.14, Mineral Aggregate Chart.

3.13.3 Vapor Barrier

We recommend placing a vapor barrier beneath the slab on grade floor. We recommend using a 10- to 15-mil, puncture-resistant proprietary product such as Stego Wrap, or an approved equivalent that is classified as a Class A vapor retarder in accordance with ASTM E 1745. Overlap lengths and the appropriate tape used to seal the laps should be in accordance the vapor retarder manufacturer's recommendations. To avoid puncturing of the vapor barrier, a thin sand layer placed over the crushed gravel is recommended. When conditions warrant the use of a vapor retarder, the slab designer and slab contractor should refer to ACI 302 and ACI 360 for procedures and cautions regarding the use and placement of a vapor retarder/barrier.

3.13.4 Sub-Slab Drainage

Due to the groundwater elevations encountered in borings B-2 and B-3 at the time of drilling, we recommend that a sub-floor drain system be installed beneath the eastern portion of Level 1. We recommend that two, north-south trending, 4-inch diameter perforated sub-floor drains be installed below the Level 1 floor slab on a 20- to 25-foot horizontal spacing and be installed a minimum of 2 feet below the bottom of the floor slab. We recommend that the trench backfill consist of washed crushed gravel or Type 22, ¾-inch Crushed Gravel as specified in City of Seattle Standard Specification 9-03.9, or an approved equivalent. The gravel and perforated drainpipe should be fully wrapped with a non-woven geotextile fabric such as Mirafi 140N or equivalent. The drainage system should be designed to discharge by gravity to an approved discharge location or pumped sump. The drains should be located in a manner such that they do not encroach into the bearing soils of adjacent footings that is defined as line extending down at a 1H:1V line from the edges of the footings.

We anticipate that elevator pits and other structures in the eastern portion of Level 1 may extend below the recommended sub-slab drain system. Unless a drainage system is installed to prevent the build-up of groundwater around them, we recommend that they be designed to withstand hydrostatic uplift forces and be waterproofed to prevent leakage through cracks and cold joints, and wall penetrations.

3.14 Asphalt Pavements

3.14.1 Pavement Life and Maintenance

It should be realized that asphaltic pavements are not maintenance-free. The following pavement sections represent our minimum recommendations for an average level of performance during a 20-year design life; therefore, an average level of maintenance will likely be required. A 20-year pavement life typically assumes that an overlay will be placed after about 12 years. Thicker asphalt, base, and subbase courses would offer better long-term performance, but would cost more initially. Conversely, thinner courses would be more susceptible to “alligator” cracking and other failure modes. As such, pavement design can be considered a compromise between a high initial cost and low maintenance costs versus a low initial cost and higher maintenance costs.

3.14.2 Soil Design Values

The subgrade soils are anticipated to consist primarily of compacted structural fill derived from on-site sources. Based on the typical values provided by similar material, we have estimated a California Bearing Ratio (CBR) value of 20 percent for this project. Where loose fill soils are present, we recommend that the upper 2 feet of asphalt pavement subgrade be compacted to a minimum of 95 percent of the modified Proctor maximum dry density. This will require over-excavating the upper foot, compacting the exposed subgrade and placing the excavated material as structural fill. Where loose soil is not present, we recommend that the upper foot of pavement subgrade be compacted to a minimum of 95 percent of the modified Proctor maximum dry density. Subsequently, the subgrades should be proof rolled with a loaded dump truck or other suitable heavy equipment to determine that the subgrade is firm and unyielding. Areas that are soft or yielding should be repaired as necessary to meet the compaction and proof-rolling recommendations presented herein.

3.14.3 Traffic Design Values

No traffic loading was provided for this project. We have assumed relatively low traffic volumes for light- and heavy-duty pavements. If traffic routes are expected across the site that could increase the estimated traffic loading, ZGA should be notified so that we can re-analyze the pavement sections.

3.14.4 Recommended Pavement Sections

For light-duty pavements (parking lot areas), we recommend 2½ inches of asphalt concrete over 5 inches of crushed rock base course. For heavy-duty pavements (main access roads, truck delivery routes, etc.), we recommend 3 inches of asphalt concrete over 6 inches of crushed rock base course.

3.14.5 Materials and Construction

We recommend the following regarding asphalt pavement materials and pavement construction.

- Subgrade Preparation: Upper 12 inches of pavement subgrade should be prepared in accordance with the recommendations presented in the Subgrade Preparation section of this report.
- Asphalt Concrete: We recommend that the asphalt concrete conform to Section 9-02.1(4) for PG 58-22 or PG 64-22 Performance Graded Asphalt Binder as presented in the 2018 WSDOT Standard Specifications. We also recommend that the gradation of the asphalt aggregate conform to the aggregate gradation control points for ½-inch mixes as presented in Section 9-03.8(6), HMA Proportions of Materials.
- Base Course: We recommend that the crushed aggregate base course conform to Section 9-03.9(3) of the WSDOT Standard Specifications.
- Compaction: All base material should be compacted to at least 95 percent of the maximum dry density determined in accordance with ASTM D1557. We recommend that asphalt be compacted to a minimum of 92 percent and a maximum of 96 percent of the theoretical maximum density.

3.15 Concrete Pavements

The subgrade soils are anticipated to consist primarily of compacted structural fill derived from on-site sources. Based on the typical values provided by similar material, we have estimated a California Bearing Ratio (CBR) value of 20 percent for this project. Where loose fill soils are present, we recommend that the upper 2 feet of concrete pavement subgrade be compacted to a minimum of 95 percent of the modified Proctor maximum dry density. This will require over-excavating the upper foot, compacting the exposed subgrade and placing the excavated material as structural fill. Where loose soil is not present, we recommend that the upper foot of pavement subgrade be compacted to a minimum of 95 percent of the modified Proctor maximum dry density. Subsequently, the subgrades should be proof rolled with a loaded dump truck or other suitable heavy equipment to determine that the subgrade is firm and unyielding. Areas that are soft or yielding should be repaired as necessary to meet the compaction and proof-rolling recommendations presented herein.

3.15.2 Concrete Properties and Thickness

Concrete pavement design recommendations are based on an assumed modulus of rupture of 580 psi and a minimum compressive strength of 4,000 psi for the concrete. The recommendations are also based on achieving a minimum of 95 percent relative compaction per ASTM D1557 in the underlying base course and the upper foot of subgrade soils. For light duty pavements, we recommend 5 inches of concrete over 4 inches of crushed aggregate base. For heavy duty pavements, we recommend 6 inches of concrete over 4 inches of crushed aggregate base.

3.15.3 Concrete Pavement Joints and Reinforcing

Based on the soils encountered, we recommend that concrete pavements be lightly reinforced with 6x6-W2.0xW2.0 welded wire fabric or equivalent to control cracking and have relatively closely spaced contraction joints on the order of 8 to 10 feet. We recommend that contraction joints be cut in a timely manner on the same day as the pour to reduce the risk of shrinkage cracking during curing. We recommend that garbage compactor aprons be reinforced with No. 4 bars spaced about 15 inches in each direction.

3.16 Recommendations for Further Study

Based on the approximate 4½ feet of loose, undocumented fill encountered in borings B-2 and B-3, it is possible that portions of the retaining wall may be situated in areas of loose fill that are unsuitable for retaining wall foundation support. The retaining wall along the south property line is also situated along the top of several steep slopes approaching 10 feet tall. It appears that the wall above these steep slopes will vary in height from approximately 7 to 18 feet. Besides the possible presence of unsuitable loose fill along the wall alignment, the location of the wall (and its associated backfill) above the steep slopes will subject the slopes to large surcharges which could create global slope stability issues. For these reasons, we recommend that 3 additional borings be completed along the proposed south wall alignment. This information will provide additional data regarding the presence of loose fill soils and provide information for slope stability analysis.

A soil-cement mix design may need to be completed once a final grading plan has been developed and the thickness of fill beneath the southwestern portion of the building can be determined.

4.0 CLOSURE

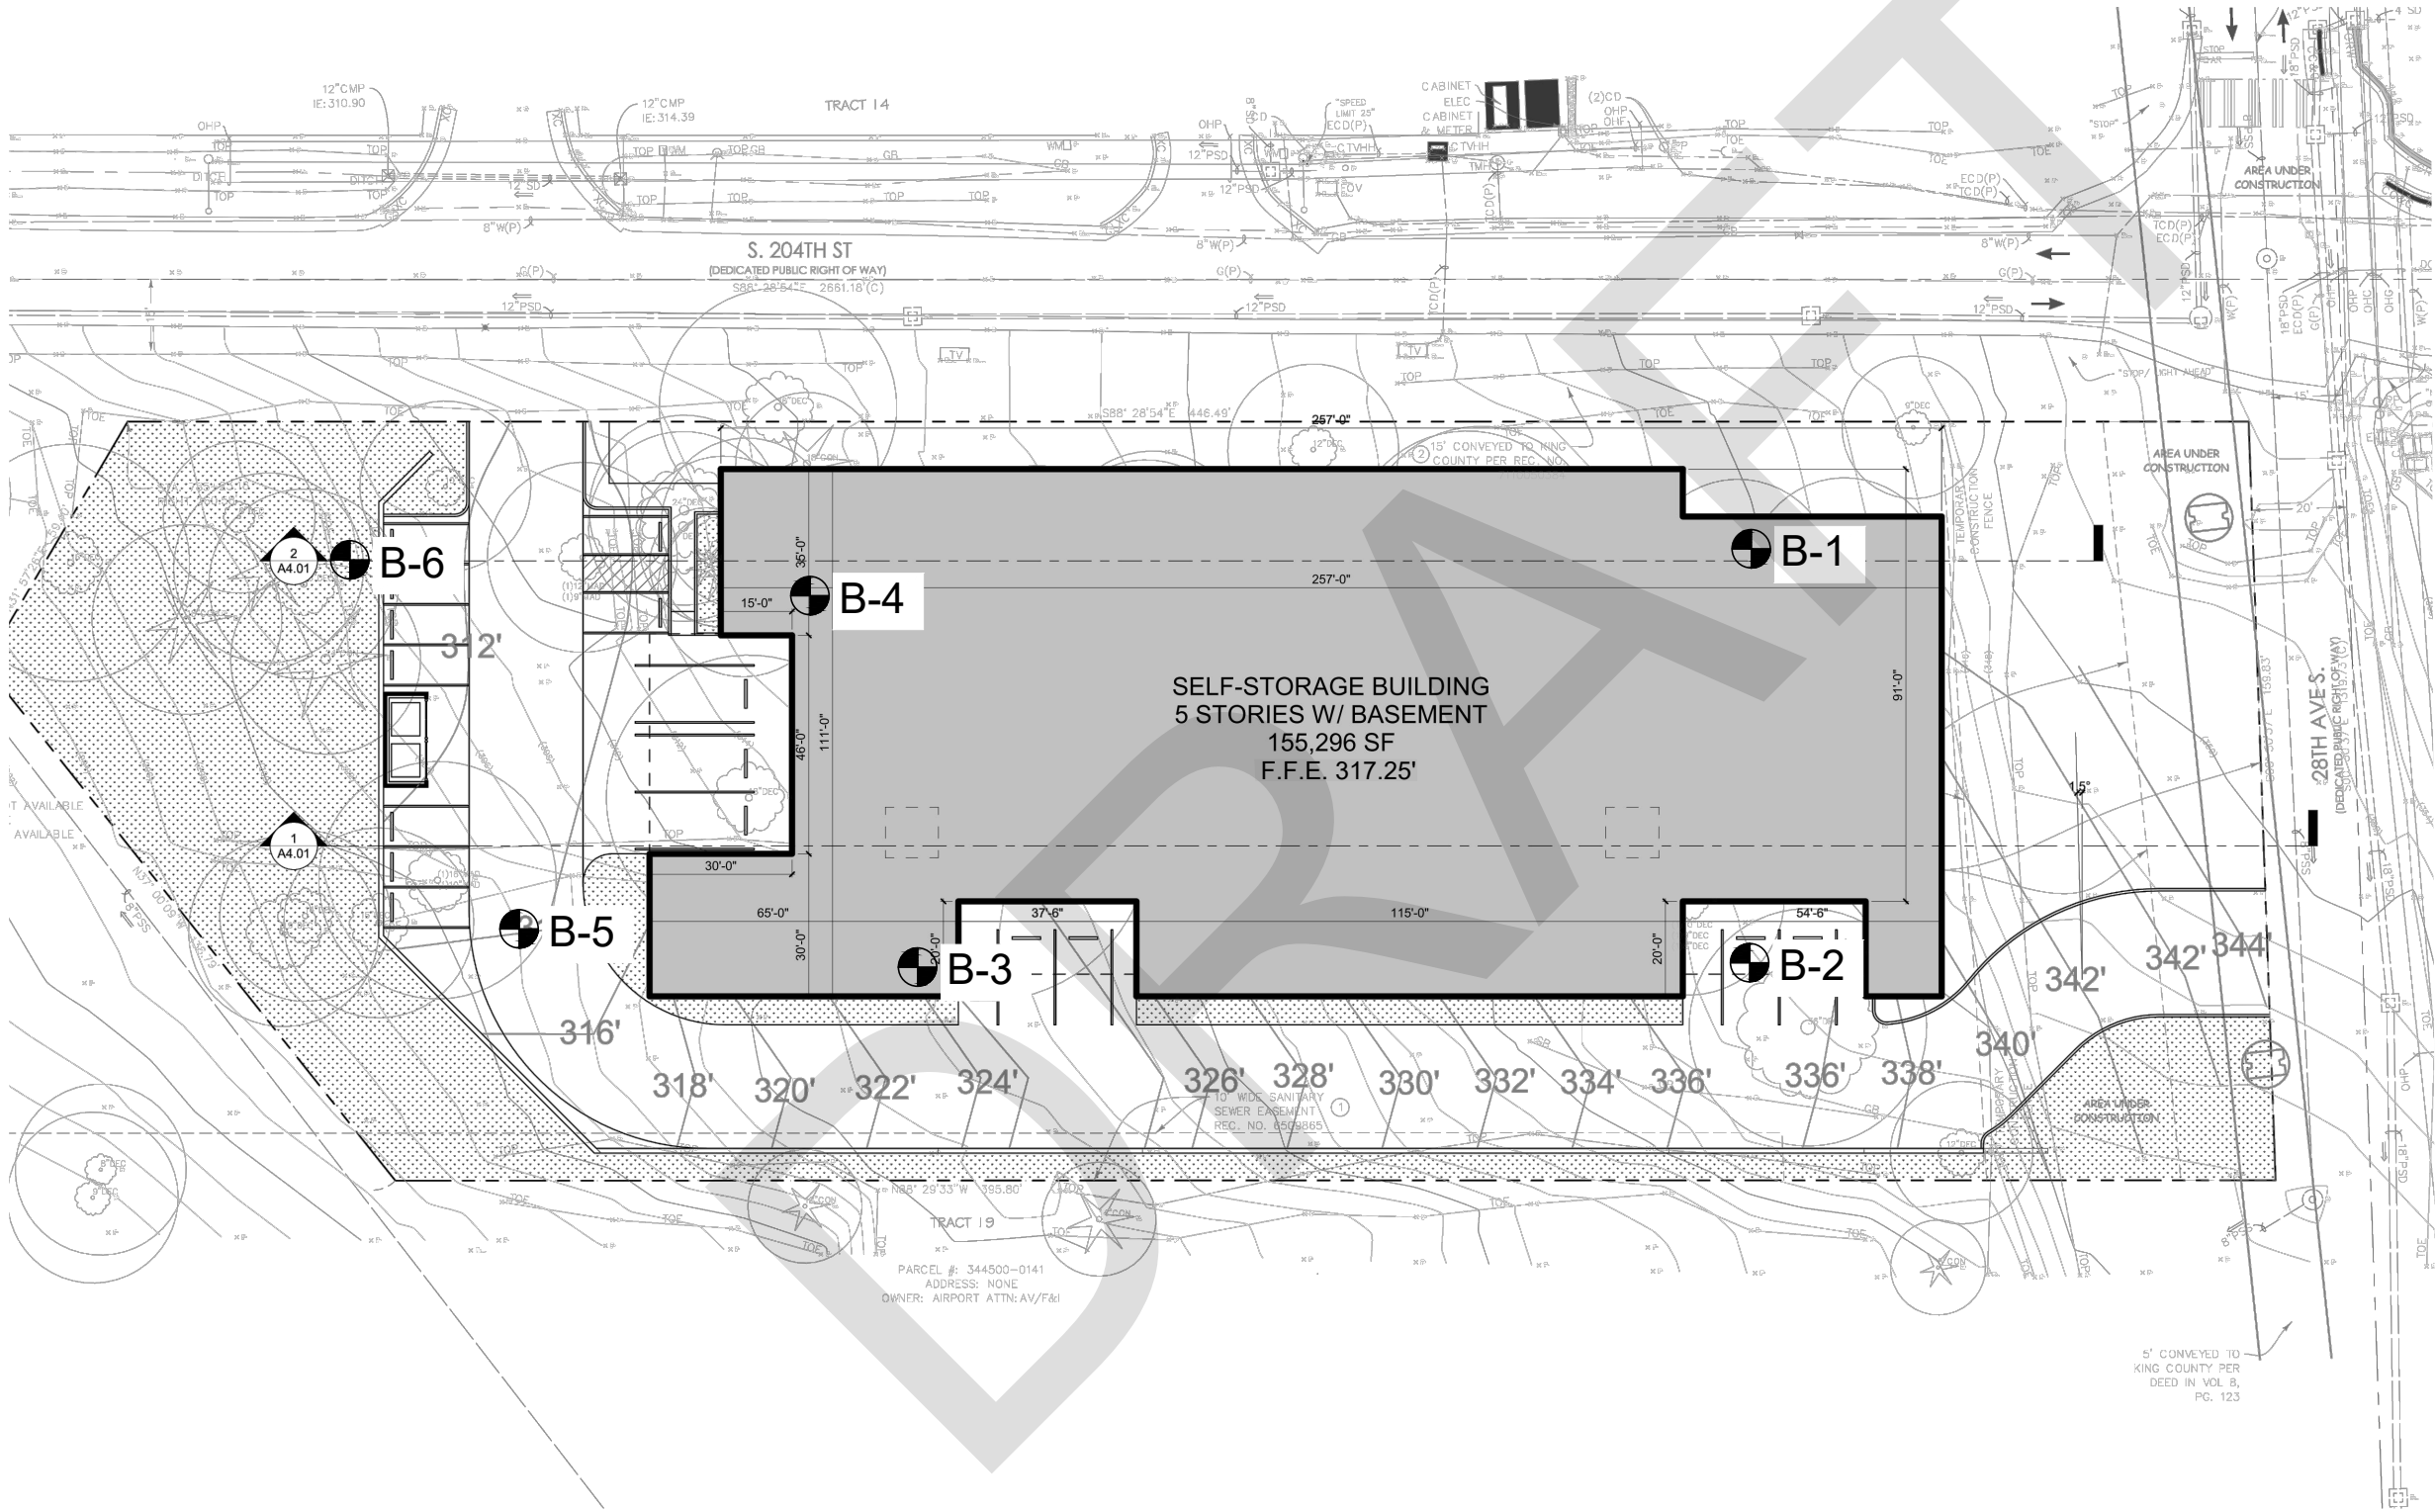

The analysis and recommendations presented in this report are based, in part, on the explorations completed for this study, as well as the conceptual plans provided to us. The number, location, and depth of the explorations were completed within the constraints of budget and site access so as to formulate our geotechnical recommendations. Project plans were in the preliminary stage at the time this report was prepared. We therefore recommend that we be provided an opportunity to review any changes in the plans as they become available in order to assess if the recommendations presented in the report are reflective of the building layout and design. Once final plans have been developed, we recommend that the plans be reviewed by ZGA in order to determine that the recommendations and design considerations presented in the final report have been properly interpreted and implemented into the project design.

The performance of earthwork, structural fill, foundations, and temporary shoring depend greatly on proper site preparation and construction procedures. We recommend that Zipper Geo Associates, LLC be retained to provide geotechnical engineering services during the earthwork-related construction phases of the project. If variations in subsurface conditions are observed at that time, a qualified geotechnical engineer could provide additional geotechnical recommendations to the contractor and design team in a timely manner as the project construction progresses.

This report has been prepared for the exclusive use of InSite Property Group and their agents for specific application to the project discussed and has been prepared in accordance with generally accepted geotechnical engineering practices. No warranties, either express or implied, are intended or made. Site safety, excavation support, and dewatering requirements are the responsibility of others. In the event that changes in the nature, design, or location of the project as outlined in this report are planned, the conclusions and recommendations contained in this report shall not be considered valid unless Zipper Geo Associates, LLC reviews the changes and either verifies or modifies the conclusions of this report in writing.

APPENDIX A

SUBSURFACE EXPLORATION PROCEDURES AND LOGS

DRAFT

APPENDIX A

SUBSURFACE EXPLORATION PROCEDURES AND LOGS

Subsurface Exploration Description

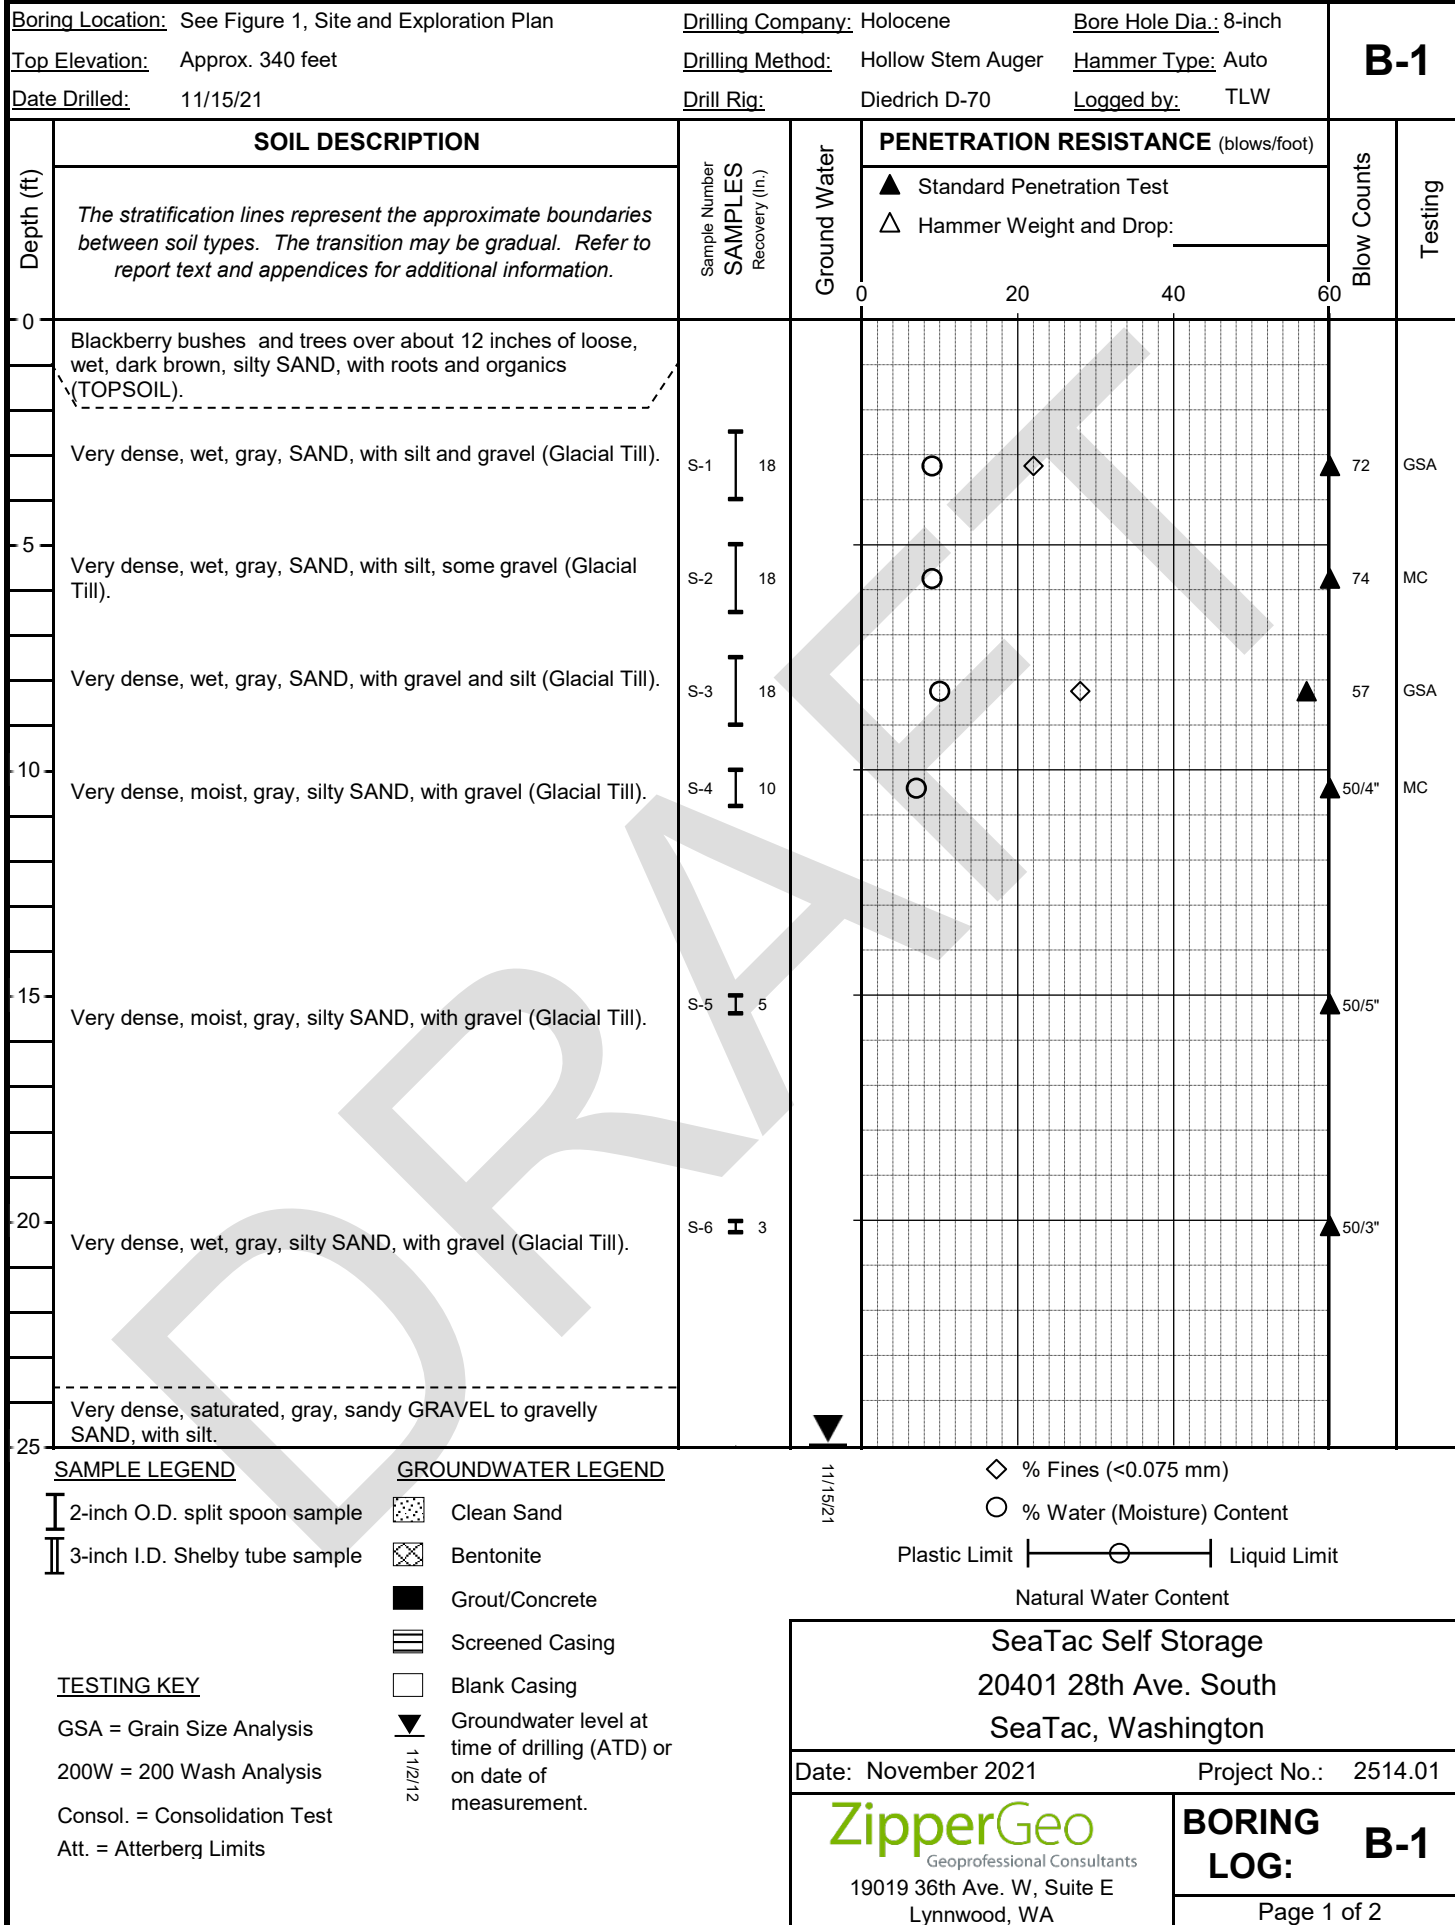

Our subsurface evaluation for this project included advancement of 6 borings completed on November 15 and 16, 2021. The approximate locations of the explorations are presented on Figure 1, the Site and Exploration Plan. The exploration locations were determined by measuring with a fiberglass tape relative to existing site features. As such, the exploration locations should be considered accurate only to the degree implied by the means and methods used to define them.

Soil Borings

The borings were advanced using a track-mounted drill rig operated by an independent drilling company (Holocene Drilling, Inc.) working under subcontract to ZGA. The borings were advanced using hollow stem auger drilling methods. A geotechnical engineer from our firm continuously observed the borings, logged the subsurface conditions encountered, and obtained representative soil samples. All samples were stored in moisture-tight containers and transported to our laboratory for further evaluation and testing. Samples were obtained by means of the Standard Penetration Test at 2.5- to 5-foot intervals throughout the drilling operation.

The Standard Penetration Test (ASTM D1586) procedure consists of driving a standard 2-inch outside diameter steel split spoon sampler 18 inches into the soil with a 140-pound hammer free falling 30 inches. The number of blows required to drive the sampler through each 6-inch interval is recorded, and the total number of blows struck during the final 12 inches is recorded as the Standard Penetration Resistance, or "blow count" (N value). If a total of 50 blows are struck within any 6-inch interval, the driving is stopped and the blow count is recorded as 50 blows for the actual penetration distance. The resulting Standard Penetration Resistance values indicate the relative density of granular soils and the relative consistency of cohesive soils.

The enclosed boring logs describes the vertical sequence of soils and materials encountered in the borings, based primarily upon our field classifications. Where a soil contact was observed to be gradational, our logs indicate the average contact depth. Where a soil type changed between sample intervals, we inferred the contact depth. Our logs also graphically indicate the blow count, sample type, sample number, and approximate depth of each soil sample obtained from the borings. If groundwater was encountered, the approximate groundwater depth, and date of observation, are depicted on the logs.

APPENDIX B
LABORATORY TESTING PROCEDURES AND TESTING RESULTS

DRAFT

APPENDIX B

LABORATORY TESTING PROCEDURES AND TESTING RESULTS

A series of laboratory tests were performed by ZGA during the course of this study to evaluate the index and geotechnical engineering properties of the subsurface soils. Descriptions of the types of tests performed are given below.

Visual Classification

Samples recovered from the exploration locations were visually classified in the field during the exploration program. Representative portions of the samples were carefully packaged in moisture tight containers and transported to our laboratory where the field classifications were verified or modified as required. Visual classification was generally done in accordance with ASTM D2488. Visual soil classification includes evaluation of color, relative moisture content, soil type based upon grain size, and accessory soil types included in the sample. Soil classifications are presented on the exploration logs in Appendix A.

Moisture Content Determinations

Moisture content determinations were performed on representative samples obtained from the explorations in order to aid in identification and correlation of soil types. The determinations were made in general accordance with the test procedures described in ASTM D2216. Moisture contents are presented on the exploration logs in Appendix A.

Grain Size Analysis

A grain size analysis indicates the range in diameter of soil particles included in a particular sample. Grain size analyses were performed on representative samples in general accordance with ASTM D6913. The results of the grain size determinations for the samples were used in classification of the soils and are presented in this appendix.

Arborist Report

To: Jackson Main Architecture c/o Casey Kispert
Site: 20401 S 204th St SeaTac, WA 98198, Parcel #3445000140
Re: Tree Inventory and Assessment
Date: May 4, 2022
Project Arborists: Andrea Starbird
ISA Certified Arborist #PN-9084A
ISA Qualified Tree Risk Assessor
Reviewed By: Sean Dugan, RCA #457
ISA Board Certified Master Arborist #PN-5459B
ISA Qualified Tree Risk Assessor
Referenced Documents: SeaTac Self-Storage Feasibility Study (Jackson Main Architecture, 10/8/2021)
SeaTac Self-Storage Site Plan (Jackson Main Architecture, 03/23/2022)
Attached: Table of Trees
Tree Site Map

Summary

I inventoried and assessed 38 significant trees on-site. Site trees are identified numerically and are tagged with aluminum tree tags.

The project proposes to remove all trees on the site to accommodate the development of a self-storage complex. To remove all trees on-site, the city of SeaTac requires a no fee "Tree Clearing Permit" from the Department. Once a building permit is approved for the new development, the project must apply for a no-fee Tree Clearing Permit prior to removing the trees.

Replacement trees and site landscaping will be required per SMC Chapter 15.445 Landscaping and Tree Retention.

There are three trees off-site with overhanging canopies. I estimated the diameter of these trees from the subject site; off-site trees are identified alphabetically.

Assignment and Scope of Work

This report outlines the site inspection by Andrea Starbird and Malia Seavey, of Tree Solutions Inc. on December 3, 2021. I was asked to visit the site and assess significant trees on-site. I was asked to produce an Arborist Report documenting my findings and recommendations. Jackson Main Architecture requested these services to inform project planning.

Observations

Site

The 73,062 square foot site fronts S 204th St in SeaTac, WA and is zoned Regional Business Mix (RBX). The site is currently forested and undeveloped. The adjacent parcels to the south are zoned Mobile Home Park (MHP).

The project Pre-Application Packet notes that according to the city of SeaTac, a steep slope environmentally critical area may be present on the site.

According to King County iMap, and the SeaTac Comprehensive Plan environmental maps, there are no environmentally sensitive areas on the parcel.

Trees

SeaTac municipal code (SMC) defines a significant tree as 'an existing healthy tree which, when measured three (3) feet above grade, has a minimum diameter of:

- A. 8 inches for evergreen trees; or
- B. 12 inches for deciduous trees (excluding poplar trees).

Tree Solutions measured or estimated diameters of assessed trees at 3 feet above grade; this measurement is referenced as Diameter at Standard Height (DSH) for the purpose for this report.

There were several cottonwood (*Populus trichocarpa*) trees on the site. As SMC excludes poplar trees from the definition of a significant tree, I did not inventory or assess the cottonwood trees, but did identify surveyed cottonwoods on the attached annotated survey.

I have included an aerial image of the site and attached a table of trees that has detailed information about each tree.

Discussion—Construction Impacts

The City of SeaTac Municipal Code (SMC) 15.445.420 provides retention guidelines, which indicate significant trees located in the following areas are not required to be saved:

1. Trees within the building footprint of a proposed structure.
2. Trees within any private access easement and interior roads.
3. Trees within any proposed utility easement

Proposed Plans

The SeaTac Self-Storage feasibility plan proposes a new self-storage facility with associated parking and landscaping. As drawn, significant trees 447 and 449 will be retained. The remaining trees will require removal to accommodate development. Site trees are all located within the proposed building footprint, or road and right-of-way improvements.

Once a building permit is approved for the project, a no fee Tree Clearing Permit is required to clear the trees approved for removal.

Landscaping will be required as outlined in SMC 15.445.200. This site is adjacent to a MHP, which means additional requirements for buffering purposes apply per SMC 15.445.210.

Adjacent Site Trees

Off-site trees A, B, and C located along the south property line will be retained.

Tree Protection

SeaTac requires tree protection at the dripline of retained trees, which is appropriate for all trees being proposed for retention.

Install tree protection fencing at the outer edge of the dripline. Tree protection fencing should be installed at the extent of the tree protection zone and should consist of 6-foot-tall chain link fencing. No sediment control fencing may be trenched through tree protection zones.

No construction access, materials dumping, staging or storing may occur within the tree protection areas. If clearance pruning is required to accommodate construction access, all pruning shall be performed by an experienced ISA certified arborist and conform with current ANSI A300 standards.

Recommendations

- Add driplines for site trees proposed for retention and all off-site trees to plans per attached Table of Trees.
- Tree protection consisting of chain link fencing should be installed at the tree protection zone (dripline) for all retained off-site trees. Trees growing in a group should be protected at the edge of their shared driplines. General tree protection specifications are provided in Appendix F
- Obtain all necessary permits and approval from the city prior to commencement of site work.
- Remove all invasive species during development.
- All pruning should be conducted by an ISA certified arborist following current ANSI A300 specifications.¹

Respectfully submitted,

Andrea Starbird,
Consulting Arborist

¹ ANSI A300 (Part 1) – 2017 American National Standards Institute. American National Standard for Tree Care Operations: Tree, Shrub, and Other Woody Plant Maintenance: Standard Practices (Pruning). New York: Tree Care Industry Association, 2017.

Appendix A Glossary

ANSI A300: American National Standards Institute (ANSI) standards for tree care

codominant stems: stems or branches of nearly equal diameter, often weakly attached (Matheny *et al.* 1998)

DBH or DSH: diameter at breast or standard height; the diameter of the trunk measured 54 inches (4.5 feet) above grade (Council of Tree and Landscape Appraisers 2019)

deciduous: tree or other plant that loses its leaves sometime during the year and stays leafless generally during the cold season (Lilly 2001)

evergreen: tree or plant that keeps its needles or leaves year round; this means for more than one growing season (Lilly 2001)

ISA: International Society of Arboriculture

included bark: bark that becomes embedded in a crotch between branch and trunk or between codominant stems and causes a weak structure (Lilly 2001)

regulated tree: A tree required by municipal code to be identified in an arborist report.

structural defects: flaws, decay, or other faults in the trunk, branches, or root collar of a tree, which may lead to failure (Lilly 2001)

Visual Tree Assessment (VTA): method of evaluating structural defects and stability in trees by noting the pattern of growth (Mattheck & Breloer 1994)

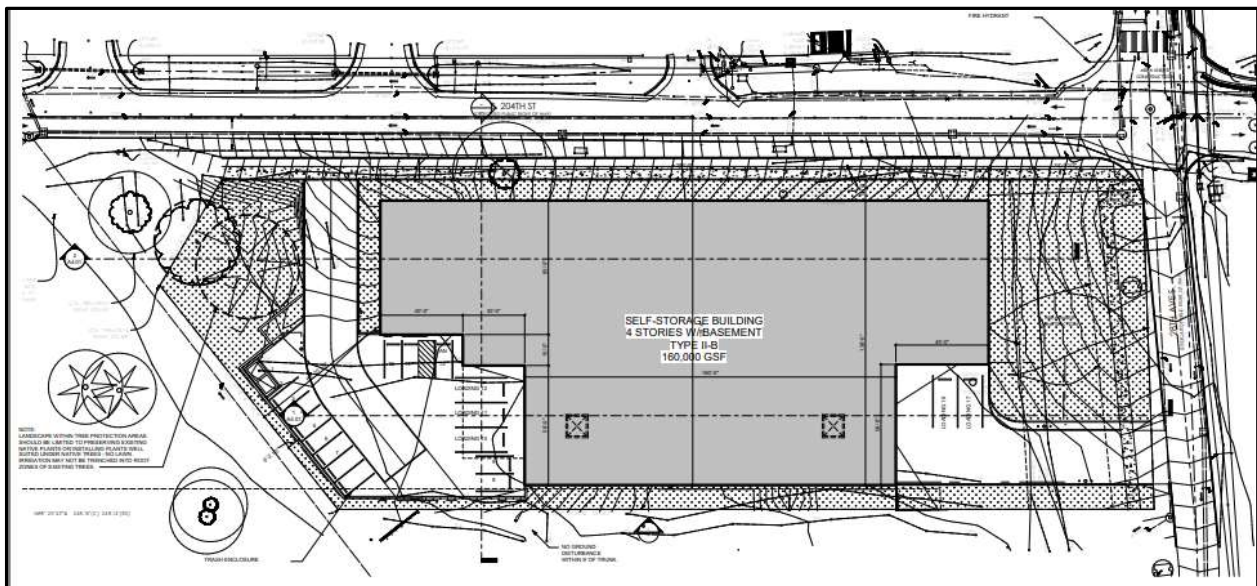

Figure 2. Site plan produced by Jackson Main Architecture. All but two site trees are proposed for removal to accommodate development.

Appendix D Assumptions & Limiting Conditions

- 1 Consultant assumes that the site and its use do not violate, and is in compliance with, all applicable codes, ordinances, statutes or regulations.
- 2 The consultant may provide a report or recommendation based on published municipal regulations. The consultant assumes that the municipal regulations published on the date of the report are current municipal regulations and assumes no obligation related to unpublished city regulation information.
- 3 Any report by the consultant and any values expressed therein represent the opinion of the consultant, and the consultant's fee is in no way contingent upon the reporting of a specific value, a stipulated result, the occurrence of a subsequent event, or upon any finding to be reported.
- 4 All photographs included in this report were taken by Tree Solutions, Inc. during the documented site visit, unless otherwise noted. Sketches, drawings and photographs (included in, and attached to, this report) are intended as visual aids and are not necessarily to scale. They should not be construed as engineering drawings, architectural reports or surveys. The reproduction of any information generated by architects, engineers or other consultants and any sketches, drawings or photographs is for the express purpose of coordination and ease of reference only. Inclusion of such information on any drawings or other documents does not constitute a representation by the consultant as to the sufficiency or accuracy of the information.
- 5 Unless otherwise agreed, (1) information contained in any report by consultant covers only the items examined and reflects the condition of those items at the time of inspection; and (2) the inspection is limited to visual examination of accessible items without dissection, excavation, probing, climbing, or coring.
- 6 These findings are based on the observations and opinions of the authoring arborist, and do not provide guarantees regarding the future performance, health, vigor, structural stability or safety of the plants described and assessed.
- 7 Measurements are subject to typical margins of error, considering the oval or asymmetrical cross-section of most trunks and canopies.
- 8 Tree Solutions did not review any reports or perform any tests related to the soil located on the subject property unless outlined in the scope of services. Tree Solutions staff are not and do not claim to be soils experts. An independent inventory and evaluation of the site's soil should be obtained by a qualified professional if an additional understanding of the site's characteristics is needed to make an informed decision.
- 9 Our assessments are made in conformity with acceptable evaluation/diagnostic reporting techniques and procedures, as recommended by the International Society of Arboriculture.

Appendix E Methods

Measuring

I measured the diameter of each tree at 36 inches above grade, diameter at standard height (DSH). If a tree had multiple stems, I measured each stem individually at standard height and determined a single-stem equivalent diameter by using the method outlined in the Guide for Plant Appraisal, 10th Edition Second Printing published by the Council of Tree and Landscape Appraisers. A tree is regulated based on this single-stem equivalent diameter value.

Tagging

I tagged each tree with a circular aluminum tag at eye level. I assigned each tree a numerical identifier on our map and in our tree table, corresponding to this tree tag. I used alphabetical identifiers for trees off-site.

Evaluating

I evaluated tree health and structure utilizing visual tree assessment (VTA) methods. The basis behind VTA is the identification of symptoms, which the tree produces in reaction to a weak spot or area of mechanical stress. A tree reacts to mechanical and physiological stresses by growing more vigorously to re-enforce weak areas, while depriving less stressed parts. An understanding of the uniform stress allows the arborist to make informed judgments about the condition of a tree.

Rating

When rating tree health, I took into consideration crown indicators such as foliar density, size, color, stem and shoot extensions. When rating tree structure, I evaluated the tree for form and structural defects, including past damage and decay. Tree Solutions has adapted our ratings based on the Purdue University Extension formula values for health condition (*Purdue University Extension bulletin FNR-473-W - Tree Appraisal*). These values are a general representation used to assist arborists in assigning ratings.

Health

Excellent - Perfect specimen with excellent form and vigor, well-balanced crown. Normal to exceeding shoot length on new growth. Leaf size and color normal. Trunk is sound and solid. Root zone undisturbed. No apparent pest problems. Long safe useful life expectancy for the species.

Good - Imperfect canopy density in few parts of the tree, up to 10% of the canopy. Normal to less than ¾ typical growth rate of shoots and minor deficiency in typical leaf development. Few pest issues or damage, and if they exist they are controllable or tree is reacting appropriately. Normal branch and stem development with healthy growth. Safe useful life expectancy typical for the species.

Fair - Crown decline and dieback up to 30% of the canopy. Leaf color is somewhat chlorotic/necrotic with smaller leaves and “off” coloration. Shoot extensions indicate some stunting and stressed growing conditions. Stress cone crop clearly visible. Obvious signs of pest problems contributing to lesser condition, control might be possible. Some decay areas found in main stem and branches. Below average safe useful life expectancy

Poor - Lacking full crown, more than 50% decline and dieback, especially affecting larger branches. Stunting of shoots is obvious with little evidence of growth on smaller stems. Leaf size and color reveals overall stress in the plant. Insect or disease infestation may be severe and uncontrollable. Extensive decay or hollows in branches and trunk. Short safe useful life expectancy.

Structure

Excellent - Root plate undisturbed and clear of any obstructions. Trunk flare has normal development. No visible trunk defects or cavities. Branch spacing/structure and attachments are free of any defects.

Good - Root plate appears normal, with only minor damage. Possible signs of root dysfunction around trunk flare. Minor trunk defects from previous injury, with good closure and less than 25% of bark section missing. Good branch habit; minor dieback with some signs of previous pruning. Codominant stem formation may be present, requiring minor corrections.

Fair - Root plate reveals previous damage or disturbance. Dysfunctional roots may be visible around the main stem. Evidence of trunk damage or cavities, with decay or defects present and less than 30% of bark sections missing on trunk. Co-dominant stems are present. Branching habit and attachments indicate poor pruning or damage, which requires moderate corrections.

Poor - Root plate disturbance and defects indicate major damage, with girdling roots around the trunk flare. Trunk reveals more than 50% of bark section missing. Branch structure has poor attachments, with several structurally important branches dead or broken. Canopy reveals signs of damage or previous topping or lion-tailing, with major corrective action required.

Appendix F Tree Protection Specifications

The following is a list of protection measures that must be employed before, during and after construction to ensure the long-term viability of retained trees.

1. **Project Arborist:** The project arborists shall at minimum have an International Society of Arboriculture (ISA) Certification and ISA Tree Risk Assessment Qualification.
2. **Tree Protection Zone (TPZ):** The City of SeaTac requires that a tree protection zone (TPZ) is established at the dripline of retained significant trees, however grade may not be lowered within the larger of either the dripline of the tree, or an area defined by 1 foot of every 1 inch of trunk diameter measured at 4 feet above grade. In some cases, the TPZ may extend outside tree protection fencing. Work within the TPZ must be approved and monitored by the project arborist.
3. **Tree Protection Fencing:** Tree protection shall consist of 6-foot chain-link fencing installed at the TPZ as approved by the project arborist. Fence posts shall be anchored into the ground or bolted to existing hardscape surfaces.
 - a. Where trees are being retained as a group the fencing shall encompass the entire area including all landscape beds or lawn areas associated with the grove.
 - b. Per arborist approval, TPZ fencing may be placed at the edge of existing hardscape within the TPZ to allow for staging and traffic.
 - c. Where work is planned within the TPZ, install fencing at edge of TPZ and move to limits of disturbance at the time that the work within the TPZ is planned to occur. This ensures that work within the TPZ is completed to specification.
 - d. Where trees are protected at the edge of the project boundary, construction limits fencing shall be incorporated as the boundary of tree protection fencing.
4. **Access Beyond Tree Protection Fencing:** In areas where work such as installation of utilities is required within the TPZ, a locking gate will be installed in the fencing to facilitate access. The project manager or project arborist shall be present when tree protection areas are accessed.
5. **Tree Protection Signage:** Tree protection signage shall be affixed to fencing every 20 feet. Signage shall be fluorescent, at least 2' x 2' in size, with 3" tall text. Signage will note: "Tree Protection Area – Do Not Enter: Entry into the tree protection area is prohibited unless authorized by the project manager." Signage shall include the contact information for the project manager and instructions for gaining access to the area.
6. **Filter / Silt Fencing:** Filter / silt fencing within the TPZ of retained trees shall be installed in a manner that does not sever roots. Install so that filter / silt fencing sits on the ground and is weighed in place by sandbags or gravel. Do not trench to insert filter / silt fencing into the ground.
7. **Monitoring:** The project arborist shall monitor all ground disturbance at the edge of or within the TPZ, including where the TPZ extends beyond the tree protection fencing.
8. **Soil Protection:** No parking, foot traffic, materials storage, or dumping (including excavated soils) are allowed within the TPZ. Heavy machinery shall remain outside of the TPZ. Access to the tree protection area will be granted under the supervision of the project arborist. If project arborist allows, heavy machinery can enter the area if soils are protected from the load. Acceptable methods of soil protection include applying 3/4-inch plywood over 4 to 6 inches of wood chip mulch or use of AlturnaMats® (or equivalent product approved by the project arborist). Retain existing paved surfaces within or at the edge of the TPZ for as long as possible.
9. **Soil Remediation:** Soil compacted within the TPZ of retained trees shall be remediated using pneumatic air excavation according to a specification produced by the project arborist.
10. **Canopy Protection:** Where fencing is installed at the limits of disturbance within the TPZ, canopy management (pruning or tying back) shall be conducted to ensure that vehicular traffic does not

damage canopy parts. Exhaust from machinery shall be located five feet outside the dripline of retained trees. No exhaust shall come in contact with foliage for prolonged periods of time.

11. **Duff/Mulch:** Apply 6 inches of arborist wood chip mulch or hog fuel over bare soil within the TPZ to prevent compaction and evaporation. TPZ shall be free of invasive weeds to facilitate mulch application. Keep mulch 1 foot away from the base of trees and 6 inches from retained understory vegetation. Retain and protect as much of the existing duff and understory vegetation as possible.
12. **Excavation:** Excavation done at the edge of or within the TPZ shall use alternative methods such as pneumatic air excavation or hand digging. If heavy machinery is used, use flat front buckets with the project arborist spotting for roots. When roots are encountered, stop excavation and cleanly sever roots. The project arborist shall monitor all excavation done within the TPZ.
13. **Fill:** Limit fill to 1 foot of uncompacted well-draining soil, within the TPZ of retained trees. In areas where additional fill is required, consult with the project arborist. Fill must be kept at least 1 foot from the trunks of trees.
14. **Root Pruning:** Limit root pruning to the extent possible. All roots shall be pruned with a sharp saw making clean cuts. Do not fracture or break roots with excavation equipment.
15. **Root Moisture:** Root cuts and exposed roots shall be immediately covered with soil, mulch, or clear polyethylene sheeting and kept moist. Water to maintain moist condition until the area is back filled. Do not allow exposed roots to dry out before replacing permanent back fill.
16. **Hardscape Removal:** Retain hardscape surfaces for as long as practical. Remove hardscape in a manner that does not require machinery to traverse newly exposed soil within the TPZ. Where equipment must traverse the newly exposed soil, apply soil protection as described in section 8. Replace fencing at edge of TPZ if soil exposed by hardscape removal will remain for any period of time.
17. **Tree Removal:** All trees to be removed that are located within the TPZ of retained trees shall not be ripped, pulled, or pushed over. The tree should be cut to the base and the stump either left or ground out. A flat front bucket can also be used to sever roots around all sides of the stump, or the roots can be exposed using hydro or air excavation and then cut before removing the stump.
18. **Irrigation:** Retained trees with soil disturbance within the TPZ will require supplemental water from June through September. Acceptable methods of irrigation include drip, sprinkler, or watering truck. Trees shall be watered three times per month during this time.
19. **Pruning:** Pruning required for construction and safety clearance shall be done with a pruning specification provided by the project arborist in accordance with American National Standards Institute ANSI-A300 2017 Standard Practices for Pruning. Pruning shall be conducted or monitored by an arborist with an ISA Certification.
20. **Plan Updates:** All plan updates or field modification that result in impacts within the TPZ or change the retained status of trees shall be reviewed by the senior project manager and project arborist prior to conducting the work.
21. **Materials:** Contractor shall have the following materials onsite and available for use during work in the TPZ:
 - Sharp and clean bypass hand pruners
 - Sharp and clean bypass loppers
 - Sharp hand-held root saw
 - Reciprocating saw with new blades
 - Shovels
 - Trowels
 - Clear polyethylene sheeting
 - Burlap
 - Water

Inventory - Table of Trees

20401 S. 204th St. SeaTac WA, 98198

Arborist: AS
Inventory: 12/7/21
Prepared: 01/5/22
Revised: 05/04/22

DSH (Diameter at Standard Height) is measured 3 feet above grade per SeaTac municipal code definition of a 'Significant Tree'
DSH for multi-stem trees are noted as a single stem equivalent, which is calculated using the method defined in the Guide for Plant Appraisal, 10th Edition.
Letters are used to identify trees on neighboring property with overhanging canopies.
Dripline is measured from the center of the tree to the outermost extent of the canopy.

Tree ID	Scientific Name	Common Name	DSH (inches)	DSH Multistem	Health Condition	Structural Condition	Dripline Radius (feet)	Proposed Action	Tree Protection Zone	Notes
420	<i>Acer macrophyllum</i>	Bigleaf Maple	19.4		Fair	Good	24.8	Remove	-	tight union; some deadwood in canopy
421	<i>Acer macrophyllum</i>	Bigleaf Maple	18.5		Fair	Good	26.8	Remove	-	swept base, blackberry at base, some deadwood in canopy
422	<i>Robinia pseudoacacia</i>	Black locust	12.0		Fair	Fair	18.5	Remove	-	old man's beard on trunk
423	<i>Acer macrophyllum</i>	Bigleaf Maple	39.6		Poor	Poor	25.7	Remove	-	dead top, only live branches are in the in lower canopy, living snag
424	<i>Acer macrophyllum</i>	Bigleaf Maple	20.4	10.5,12,7.9, 10	Fair	Poor	16.9	Remove	-	multistemmed, poor structure, significant bark dieback on 3 of 4 stems
425	<i>Acer macrophyllum</i>	Bigleaf Maple	33.8	24.8,23	Poor	Poor	33.4	Remove	-	2 primary stems, multiple old wounds, dead top on south stem
426	<i>Arbutus menziesii</i>	Madrone	10.6		Good	Good	18.4	Remove	-	phototropic to south
427	<i>Arbutus menziesii</i>	Madrone	12.0		Good	Good		Remove	-	phototropic to south, smaller dead stem on the south side
428	<i>Arbutus menziesii</i>	Madrone	12.0		Good	Good	13.5	Remove	-	Low live crown ratio, laurel and holly at base
429	<i>Arbutus menziesii</i>	Madrone	17.8	12.2,12.9	Fair	Good	30.7	Remove	-	codominant at base, laurel and holly at base, low live crown ratio, one stem phototropic to north the other to the south
430	<i>Arbutus menziesii</i>	Madrone	9.0		Good	Good	16.4	Remove	-	Asymmetric canopy completely to the north
431	<i>Crataegus monogyna</i>	Common hawthorn	18.1		Fair to Poor	Fair	18.8	Remove	-	extreme sapsucker activity, stunted growth, tight included unions at 15 feet
432	<i>Acer macrophyllum</i>	Bigleaf Maple	12.8		Good	Good	22.5	Remove	-	phototropic to south, southeast
433	<i>Acer macrophyllum</i>	Bigleaf Maple	13.6		Fair	Fair	20.6	Remove	-	swept base, decayed structural root on north side
434	<i>Arbutus menziesii</i>	Madrone	12.8	8,10	Good	Good	16.5	Remove	-	completely surrounded by ivy, diameters estimated, not tag due to access
435	<i>Malus</i> spp.	Crabapple	16.4		Poor	Poor	16.7	Remove	-	one stem dead, codominant at base, heavy ivy, phototropic to south, holly and laurel at base, declining
436	<i>Crataegus monogyna</i>	Common hawthorn	13.0		Fair	Poor	7.5	Remove	-	old wounds with decay, low live crown ratio, blackberry at base
437	<i>Arbutus menziesii</i>	Madrone	30.0	9.5,11,19.5, 14.5,10	Fair	Fair	22.3	Remove	-	multistemmed at base, heavy ivy throughout, diameter estimated due to ivy
438	<i>Arbutus menziesii</i>	Madrone	13.5		Fair	Fair	12.6	Remove	-	heavy ivy, diameter estimated due to ivy
439	<i>Arbutus menziesii</i>	Madrone	17.0		Fair	Fair	18.7	Remove	-	heavy ivy, phototropic to northwest, diameter estimated due to ivy
